# A Message from the President

Welcome to Liwa University, an academic institution with a proud legacy of over 30 years.

It gives me great pleasure to welcome you on behalf of our entire Liwa University community. You're stepping into a chapter of your life that will shape your future and open doors to countless new opportunities.

The transformation of Liwa College into Liwa University marks a significant milestone, one that reflects our institution's growth and maturity. This achievement comes after meeting rigorous national and international standards, allowing us to proudly carry the title of "university", a title backed by decades of academic excellence and commitment to student success.

At Liwa University, we are future-focused and student-centred. Our mission is to nurture the next generation of thinkers, leaders, entrepreneurs, and change-makers. As you step into our vibrant and diverse academic community, you'll find yourself surrounded by expert faculty, seasoned professionals, and passionate researchers, all dedicated to supporting your journey every step of the way.

With the launch of new diploma and bachelor's programs, and for the first time, two master's programs, our academic portfolio is stronger and more diverse than ever. We are also proud to have recently secured new accreditations that reaffirm our quality and commitment to educational excellence.

I personally invite you to visit our campus, speak with our faculty and students, and experience the unique energy that makes Liwa University a place of growth, discovery, and inspiration. Welcome to your future, Welcome to Liwa University.

**Professor Mohamed Mahjoub Dhiaf**
**President**

# History

Liwa University (LU) was first established as the Emirates Institute of Technology (EIT) in Abu Dhabi in early 1993. In 1993, EIT was recognized by the Ministry of Education as a higher learning institute that provides training services in computing, management, and languages. In 1995, the EIT, in association with a number of international institutions of higher education such as JML University in the UK, Northwood University in the US and Lambton College in Canada, began to offer academic programs that led to a double major diploma in business administration and computer information systems. This guaranteed the quality of the program offered to meet international standards.

In November 2003, the diploma division of EIT was recognized by the UAE Ministry of Higher Education and Scientific Research (MOHESR) to operate in the field of higher education. In April 2004, this academic section of EIT was renamed as Emirates College of Technology (ECT). In June 2004, ECT obtained the initial accreditation for its flagship "Two-Year Diploma" program in Business Administration and Computer Information Systems (Double Major) from the Commission for Academic Accreditation (CAA) of the MOHESR.

In September 2005, ECT leased a new campus in Hamdan Street, Abu Dhabi, that was designated for female students, while the old Campus at Hamdan Street was designated for male students and administration services only. In August 2007, ECT received an initial accreditation for its new Two-Year Diploma program in Human Resource Management (HRM). The rest of the diploma programs in banking and finance, accounting and graphic design and animation were accredited and offered in September 2008. In 2011, a new Diploma in Mass Communication and a Diploma in Public Relations in Arabic received initial accreditation from the CAA.

The year 2012 was an important milestone in the history of ECT as new programs at the bachelor level received accreditation from the CAA. The new Bachelor of Business Administration included the specialization in Management, Human Resource Management, and Business Information Technology. The following year, in September 2013, the Bachelor of Mass Communication was accredited. Later, in March 2014, the Bachelor of Financial Sciences also received initial accreditation from the CAA. The year 2015 has witnessed new achievements with the accreditation of two new bachelor programs: The Bachelor of Applied Health Sciences in Health Information Management and the Bachelor of Business Administration in Industrial Management.
In 2017, the new five-year Strategic Plan 2021-2017 was approved by ECT Board of Trustees. In 2018, the College of Business at ECT received international recognition from the Accreditation Council for Business Schools and Programs (ACBSP), located in Missouri, USA. The ACBSP international accreditation marked a new milestone in the history of ECT.
In 2019, LU relocated to its new campus on Fatima bin Mohamed Street, in the heart of Abu Dhabi. The new campus accommodated its four faculties: Business Administration, Media, Health Sciences, and Engineering. Simultaneously, its name was changed to Liwa College of Technology.
In 2022, the college was acquired by NEMA Education Holding and merged with Al- Khawarizmi International College (KIC) owned by the same company. The merged College was named Liwa College.
In 2025, Liwa College reached a historic milestone in its journey by receiving approval from the Ministry of Higher Education and Scientific Research (MOHESR) to be transformed into a university.

With this approval, Liwa University continued to offer its undergraduate programs in business administration, information technology, medical and health sciences, media, and engineering. This remarkable advancement was complemented by the launch of two distinguished graduate programs in Business and Media, and three innovative undergraduate programs in Health and IT, along with the introduction of specialized concentrations across several existing undergraduate disciplines—expanding opportunities and academic pathways for our students.

# Liwa University - Vision & Mission

## LU Vision

Our vision is to be an internationally recognized institution through quality of education, research, and community outreach; while empowering our students to unleash their potential and pursue their passion.

## LU Mission

Our mission is to foster the development of career-ready graduates by offering future-oriented education supported by applied research, exceptional support services, advanced technology, extensive industry connections, and the expertise of our highly qualified faculty and staff.

# Liwa University - Values

**Excellence:** We are committed to a culture of excellence in all aspects of the learning experience supported by our distinguished faculty and staff.

**Student Centered:** We create a supportive and inclusive learning environment where students are equipped with the tools and resources to thrive in their educational journey.

**Innovation:** We cultivate a collaborative culture that sparks innovation, supports our faculty, and empowers our learners to adapt to the ever- evolving professional landscape.

**Sustainability:** Our graduates are equipped with the knowledge and skills to drive positive change through our sustainability-aligned education. We prioritize environmental responsibility in our operations and activities, and we conduct impactful research aligned with the global sustainability agenda.

**Opportunity For All:** We believe that every learner should have equal access to pursue higher education based on their merits and goals, rather than on their background or circumstances.

# Liwa University – Strategic Pillars

**Pillars**

## Student Experience

1. Enable Students Success
2. Enhance Student Employability
3. Cultivate Strong Alumni Relationships
4. Promote Active Community Engagement
5. Optimize Student Journey

## Teaching and learning

1. Enhance Academic Excellence
2. Diversify Program Portfolio and Pathways
3. Support Research and Development
4. Ensure Compliance and Accreditation
5. Foster Partnerships and Collaborations

## Operational Excellence

1. Deliver Exceptional Services
2. Develop Robust Technology Infrastructure
3. Attract, Develop, and Retain Talent
4. Strengthen Brand and Market Positioning

## Sustainability

1. Promote Sustainable Environmental Practices
2. Foster Social Responsibility
3. Ensure Effective Governance
4. Promote Entrepreneurship
5. Ensure Long-term Financial Sustainability

# Liwa University Profile

Liwa University (LU) strives to empower all students to succeed academically and personally by providing them with the best resources, support, and guidance. To achieve this, the University offers targeted programs and services designed to enhance academic progress and well-being. We offer 35 academic programs across our College of Business, College of Engineering and Computing, College of Media and Public Relations and College of Medical and Health Sciences.

All Liwa University programs are accredited by the CAA under MOHESR. Our business programs are internationally accredited by the ACBSP (Accreditation Council for Business Schools and Programs), USA.

Our programs are accessible to all and offer flexible timings, including evenings and weekends, to accommodate the needs of fresh school graduates as well as working professionals.

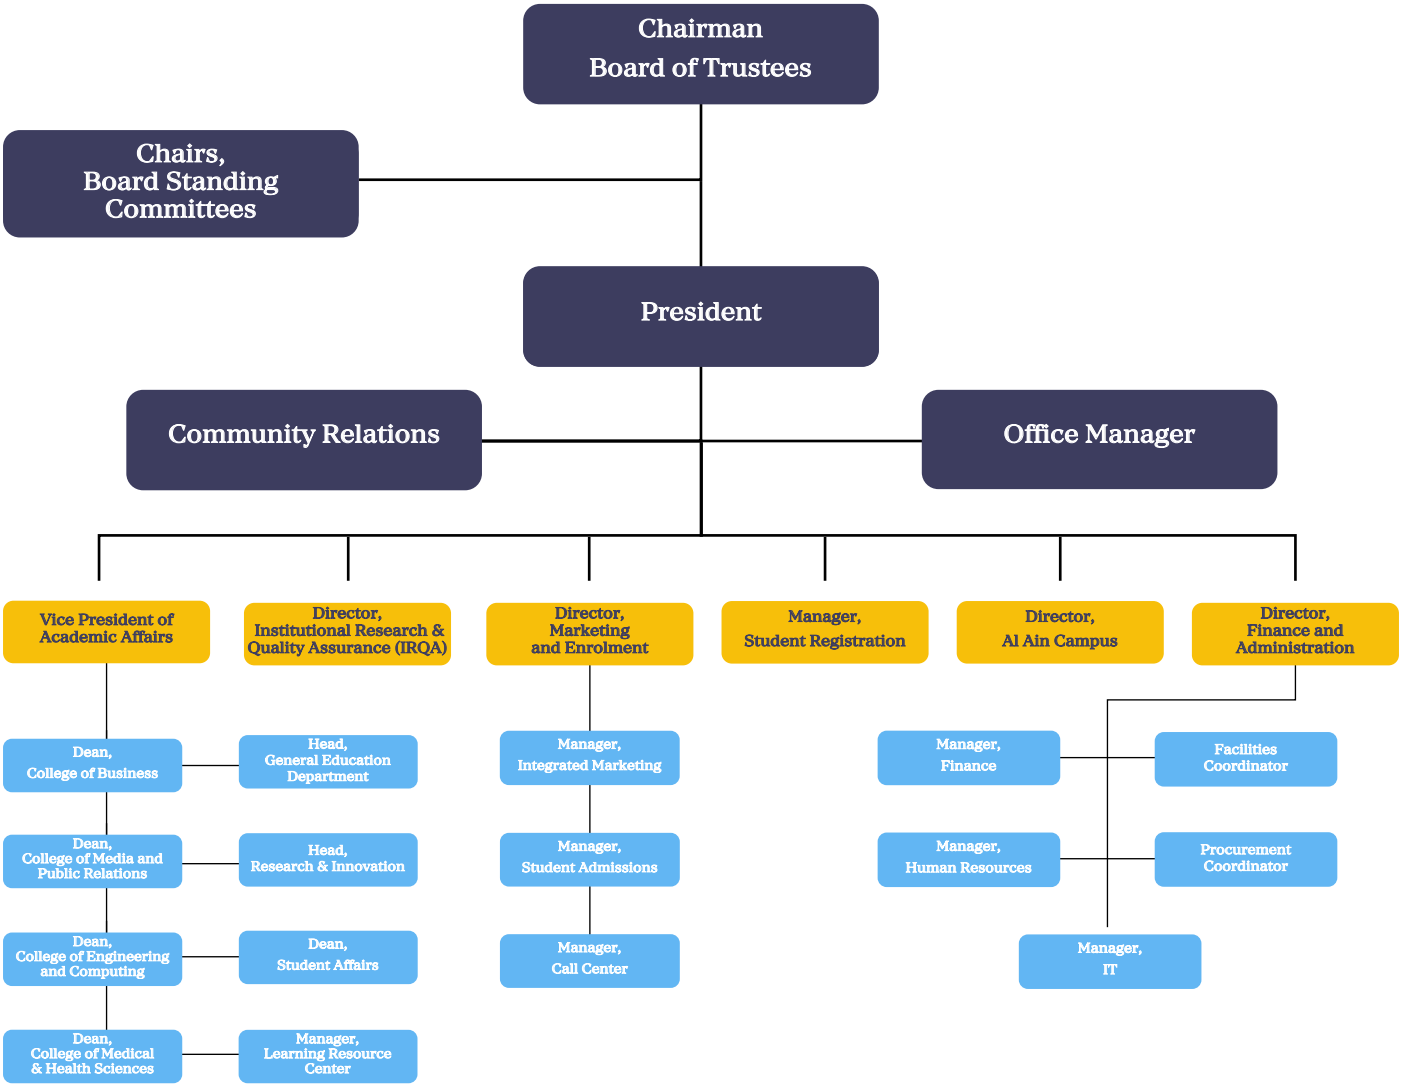

# Our Legacy

Since 1993, Liwa University has been a cornerstone of higher education in the Emirate of Abu Dhabi, nurturing potential and supplying the UAE labor market with skilled professionals.

Today, we are proud to unveil our rebranded institution! As we embark on this exciting journey, our mission remains to serve our local community by providing exceptional education and cultivating the next generation of leaders. Success starts with you!

# Licensure and Accreditation

Liwa University is officially licensed by the Ministry of Higher Education and Scientific Research (MOHESR), United Arab Emirates to award degrees/qualifications in higher education. All of its academic programs are accredited by the Ministry's Commission for Academic Accreditation (CAA).

# International Accreditation

## College of Business

In 2018, the College of Business at LU received international recognition from the Accreditation Council for Business Schools and Programs (ACBSP), located in Missouri, USA.

The list of International Accreditation (ACBSP) Programs as follows.

- Bachelor of Business Administration in Information Technology
- Bachelor of Business Administration in Human Resource Management
- Bachelor of Business Administration in Accounting
- Bachelor of Business Administration in Banking and Finance
- Bachelor of Business Administration in Management
- Diploma in Human Resource Management
- Diploma in Business Administration and Computer Information Systems

## College of Media and Public Relations

In 2025, the College of Media and Public Relations at Liwa University received international recognition by AQAS, Cologne, Germany, in accordance with the European Standards and Guidelines (ESG).
The list of International Accreditation (AQAS) Programs as follows.

Bachelor of Mass Communication Specializations in

- Digital Media
- Public Relations
- Advertising

## College of Medical and Health Sciences

In 2025, the College of Medical and Health Sciences at Liwa University was granted program accreditation by the Accreditation Agency in Health and Social Sciences (AHPGS).
The list of International Accreditation (AHPGS) Programs as follows.

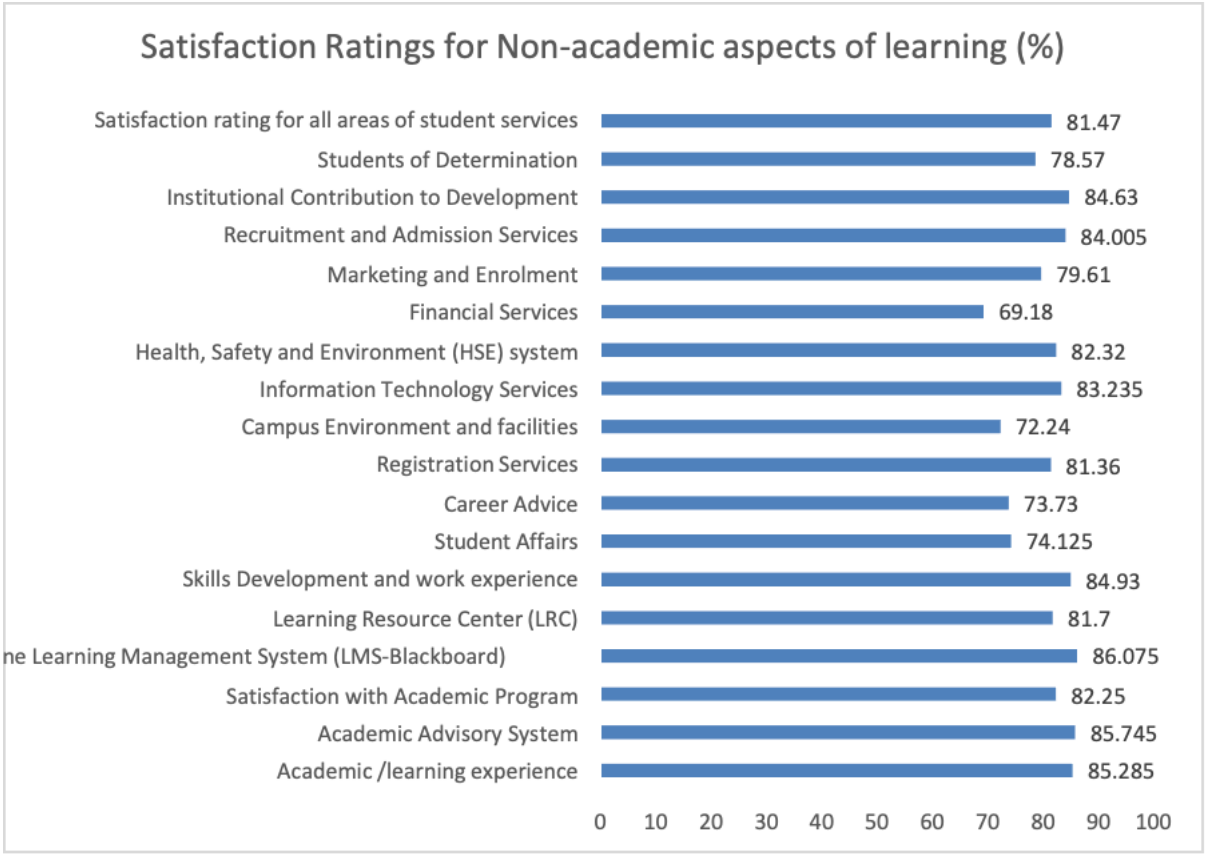

- Bachelor of Science in Emergency Medical Care
- Bachelor of Science in Medical Diagnostic Imaging
- Bachelor of Science in Respiratory Care
- Diploma in Health Management and Informatics
- Diploma in Medical Laboratory Analysis

# Undergraduate Admission

1. University admission for graduates from high schools in the UAE requires passing grades specified by the Ministry of Higher Education and Scientific Research . The minimum high school score required is specified by program (see Appendices).
2. University admission for graduates from high schools under the national education system of another country will have their credentials evaluated on a case-by-case basis. If the system includes two levels of secondary school education, completion of the higher level is required. Where the high school is in the UAE, applicants are advised to obtain an equivalency letter from the Ministry of Higher Education and Scientific Research . The minimum high school score required is specified by program (see Appendices).
3. University admission for applicants from the commercial, industrial, technical and ADNOC sectors requires passing grades specified by the Ministry of Higher Education and Scientific Research based on subjects studied in high school and the track applying for will be assessed on a case by case basis.
4. All University entry requirements comply with CAA and MOHESR requirements and include proof of appropriate language proficiency as specified by the program. Where these are not available, take the required foundation course or other approved tests by MOHESR. (see Appendices).
5. All applicants seeking admission to the University must provide original copies of all required documents relating to identity, education and language/other proficiency, as specified in the Appendices. Mandatory documents required from all applicants are listed in Appendix 1, program-specific requirements are listed in Appendix 4, Appendix 5 and Appendix

6. The University will verify all certificates submitted by the applicant through the following channels: Accessing issuing institute web site directly or inquiring from issuing institute.
7. The University application form contains a declaration that all information and documentation supplied by the applicant is accurate, true and correct. Where any applicant (new, transfer or former student) supplies fraudulent or misleading information or documentation intending to deceive the University and/or misrepresent facts , the University has the right to reject the application and/or dismiss/expel the student. In such cases, the applicant/student will lose any rights (academic or financial).
8. No exemptions will be made from the mandatory documentary requirements unless an official authorization is received from the UAE MOHESR or CAA.
9. The Recruitment, Admissions, and Scholarship Manager manages and supports the admission process, in accordance with University rules and regulations. In doing so, it will:

- Prepare, implement and evaluate an annual student admission/enrolment plan

---

**1** Presenting false or misleading credentials on applications or other documents constitutes academic misconduct. For full information, see Academic Integrity & Misconduct Policy

- Maintain up-to-date and secure student records (including back-up files).
- Provide reports on the number of admitted and registered students in each semester by campus and by program to University management on a regular specified schedule and to departments and authorized individuals upon request.

10. Application forms and information are available online.

- Applications will be processed 3 times a year, for Fall, Spring and Summer (and 4 times a year in case of 2 Summer semesters admission to the University.
- Applications for admission may be submitted any time prior to the start of each semester (end of drop and add period).
- In each semester, the final day for late registration is the last day of the Add/Drop period (see academic calendar on University website).
- Applicant must pay a (non-refundable) University application fee, at the time of admission.
- Applicants will be notified of the outcome of their application within a maximum of two weeks after the application is submitted.

11. The Admissions Office staff will check each application and will hold any application where major documents are missing and/or admission criteria are not met. Applicants will be requested to provide missing documentation and consideration of the application will be deferred until those are supplied.
12. Applicants who meet the admission criteria may be required to attend an academic department interview with a representative of the academic department concerned and will be registered in courses agreed at this interview if the need arises.
13. Following assessment of the full application (documents, interview, tests), Admissions Office staff will issue the appropriate letter with the conditions (if any), . The letter will include the student identification number and will be one of the following:

- New student with full admission.
- New student with conditional admission.
- Transfer student with full admission.
- Rejection of application.

14. Admission status is clearly indicated in the admission letter and is determined on whether the student has fulfilled all admissions criteria. Full information on all admission statuses is set out in Appendix 2.

## Definitions

Abbreviations used in this Policy:

| | |
|---|---|
| TOEFL | Test of English as a Foreign Language |
| IELTS | International English Language Testing System |
| UG | Undergraduate |
| GE | General Education |
| CAA | Commission for Academic Accreditation |
| MOHESR | Ministry of Higher Education and Scientific Research |
| UAE | United Arab Emirates |

Student Identity Number (SIN): the unique ten-digit reference number assigned to a student on acceptance/admission and used until graduation. The 10 digits each designate a piece of information, as shown:

| SIN DIGIT(S) | Content | Explanation |
|---|---|---|
| 1st | 1 or 2 | Male or Female |
| 2nd & 3rd | 22 | Year of admission |
| 4th | 1 or 3 or 5 or 7 or 9 | Semester of admission: 1= Fall; 3=Winter; 5=Spring; 7=Summer9 ;1=Summer2 |
| 6th, 7th, 8th, 9th & 10th | ID number | Sequential serial number |

# Appendix 1 -General Documentation Requirements

1. All applicants to University programs must provide the following documents:
- Application for admission (completed in full, signed and dated, fully submitted online).
- University payment receipt for the non-refundable application fee.
- recent passport-sized color photo of the applicant.
- Copy of passport.
- Copy of valid Emirates ID card.
- No Objection Letter from National Service Department (for male Emiratis).
- Original copy or attested copy of the following:
  - Either UAE GSSC-MOHESR Grade 12 transcript with minimum required average specified in the program requirements.
  - Or for other school systems (eg. British IGCSE, American High School Diploma, International Baccalaureate [IB], Iranian, Indian, Pakistani, Bangladesh, military schools or schools outside UAE), one of the following:

 Grade 13/12 transcript with minimum required average specified in program requirements plus an equivalency letter issued by the UAE MOHESR or for conditional admissions only a UAE MOHESR No Objection Certificate (if applicant has no UAE MOHESR equivalency letter).

2. Certificates issued by an educational authority outside UAE must be attested, by specific authorities and in the following order:
   1. By the country's relevant authority (eg. Ministry of Education , Education Board, or British Council).
   2. By the Embassy of the relevant country in the UAE.
   3. By the UAE Ministry of Foreign Affairs.
3. The University will verify all certificates submitted by accessing the relevant institution's website and making enquiries by email.
4. Equivalence of certificates and grades from international educational systems will be evaluted by the University using the following online resources:
- World Education Services (www.wes.org)
- Scholaro International Education Database (www.classbase.com)
- Academic Credential Evaluation Service (www.academicevaluations.org)
5. The University will return the originals to the applicant and stamp the file copies with "Original

Seen" (in all cases, whether the application is accepted or rejected). The University will not forward copies to another institution.

6. In addition to the mandatory documentation for all applicants listed above, specific programs may set extra requirements – see Appendix 4, Appendix 5 and Appendix 6.
7. No exemptions will be made from the mandatory documentary requirements unless an official authorization is received from the UAE MOHESR or CAA.

# Appendix -2 Language and other proficiency requirements

1. The University uses results of English Language tests to evaluate the proficiency of students and determine their admission status, as required by CAA and MOHESR to programs offered in the English Language. Applicants must provide original certification of one of the following:

- Valid certified TOEFL results with a minimum score of 173) 500CBT, a 61iBT).
- Valid certified IELTS (Academic) results with a minimum score of bands 5.0.
- Score of %80 on the English subject taken in high school for applicants to the Bachelor's program or %70 for applicants to the Diploma programs Or These students will be allowed to directly register in the ENG100 – English 1 course.

Students who do not satisfy the minimum required English proficiency test score will register in the English Foundation course (zero-credit course) before enrolling in ENG 101:

2. Language score requirements summary:

| ITP TOEFL Valid for 2 yrs | IBT TOEFL Valid for 2 yrs | CBT TOEFL Valid for 2 yrs | IELTS Valid for 2 yrs | English subject at high school |
|---|---|---|---|---|
| 500 | 61 | 173 | 5.0 | %80 (Bachelor) %70 (Diploma) |

# Appendix -3Admission Statuses

## General

1. Applicants must provide documents specified in Appendix 1 and Appendix 2 of the Admission Policy.
2. Applicants without an appropriate English proficiency test result must take one non-credit English Foundation course. Other remedial non-credit courses may also be required depending on academic background and program requirements. If these are not taken the applicants will not be permitted to take major courses.
3. Admission status is clearly indicated in the admission letter and is determined on whether the student has fulfilled all admissions criteria, including supplying all required documentation.
4. Admission statuses and any consequent limits on course registration are set out below.

## Full Admission

1. Applicants who provide proof of English language proficiency and of required subject scores (Physics/Math/Biol/Chem depending on program sought), in the form of a certified result on a standardized test of proficiency accepted by the MOHESR or passing the subject during high school, will be admitted with a status of Full Admission.

a. Students with Full Admission status may at any time after admission apply to enter a different University program, provided they meet the program admission requirements and, if required, demonstrate further proficiency in English language, mathematics, sciences or other subjects.
b. A student with Full Admission status may enroll in credit-bearing courses for which he/she has the required prerequisites, up to a maximum of 18 credit-hours in Fall/Spring semesters and 6 credit-hours in Winter/Summer semesters.

## Conditional Admission

a. Applicants who do not provide proof of English language proficiency or of required high school subject scores (Physics/Mathematics/Biology/Chemistry, depending on the program sought) will be admitted with a status of Conditional Admission.
b. A student with Conditional Admission status may register only for:

- Non-credit remedial English Foundation course
- Subject foundation course(s) if needed
- A maximum of Three General Education (GE) courses (9 credit hours) in Fall/Spring semesters, or one course (3 credits) in Winter/Summer semesters.

# Appendix -4 Bachelor Degrees Rules and Admission Requirements

General Rules

1. All applicants must submit all required documents as specified in Admission Policy Appendix 1 (General) and Appendix 2 (Language/EmSAT). In addition, the admission requirements for each faculty are set out in later sections of this Appendix.
2. The University will verify all certificates submitted by accessing the relevant institution's website and making enquiries by email.
3. Equivalence of certificates and grades from international educational systems will be evaluated by the University using the following online resources:

- World Education Services (www.wes.org)
- Scholaro International Education Database (www.classbase.com)
- Academic Credential Evaluation Service (www.academicevaluations.org)

4. Applicants may be granted advanced standing for prior learning, which is an acknowledgement by the University that they have already gained the knowledge, understanding and skills equivalent to the stated learning outcomes of a course taught at the University. The University Recognition of Prior Learning and Advanced Standing Policy give full details of the related process and criteria.
5. Any student wishing to change major/program after admission must meet the admission requirements of the new program/major, in addition to all University rules and regulations for changes of program/major.
6. Applicants who graduated from a University diploma program may be admitted to articulate to bachelor level, they will be required to meet the requirements of the program sought. All credits completed for the diploma program may be counted towards the bachelor's degree provided they are within the study plan of the program sought.
7. An additional University undergraduate degree will be awarded only if a student meets the admission requirements for the second degree and completes the requirements of the second degree, which must include at least 30 credit hours distinctive to the second degree and not

taken to meet requirements of the first degree.

8. Note regarding Full Admission: for all curricula parallel to GSSC, an MOHESR UAE equivalency letter issued by MOHESR is also mandatory.
9. Note regarding Conditional Admission: for all curricula parallel to GSSC, an MOHESRUAE equivalency letter OR MOHESR-NOC issued by MOHESR-UAE is also mandatory.

## Passing the UAE National Secondary School Certificate or its equivalent in other programs

# Appendix -5-Diploma Application & Admission Rules

1. The University offers the following Diploma programs:

- Diploma in Business Administration and Computer Information system
- Diploma in Human Resource Management
- Diploma in Computer Graphics and Animation
- Diploma in Information Technology
- Diploma in Health Management and Informatics
- Diploma in Medical Laboratory Analysis
- Diploma in Emergency Medical Care

2. All applicants to these programs must submit all required documents to evidence identity, education and language/other proficiency, as specified in Appendix 1 and Appendix 2 of the Admission Policy.

# Appendix -6Visiting Students Application & Admission Rules

1. Visiting students are students attending University courses with prior approval from their home institution who are not seeking a degree at the University.
2. Visiting students will be given, at their request, a transcript of courses taken at the University. They are responsible for all accreditation/transfer requirements of their home institution in relation to gaining credit for any University course(s) taken.
3. Documents required for admission of visiting students are as follows:

- Application for admission (completed in full, signed and dated).
- Copy of a valid passport.
- Copy of UAE National Family Registry for (local students).
- One recent passport-sized colored photograph.
- No-objection letter issued by the visiting student's home institution.
- Valid UAE National Identity Card.

4. Visiting students who later opt to complete their degree at the University and change their status to that of a regular University student must meet all admission requirements of the program at that time.
5. Applications to be a Visiting Student where the applicant is not enrolled in another academic institution may be admitted as a University Visiting Student without progressing to an academic degree, subject to the approval of the Recruitment, Admission and scholarships Manager on a case-by-case basis.

# Post graduate Admission

1. University admission for graduates from HEIs in the UAE requires holding a bachelor's degree recognized by the Ministry of Higher Education and Scientific Research.
2. All applicants seeking admission to the University must provide original copies of all required documents relating to identity, education and language/other proficiency. Mandatory documents required from all applicants are listed in Appendix 1.
3. The University will verify all certificates submitted by the applicant through accessing issuing institute web site directly or inquiring from issuing institute.
4. The University application form contains a declaration that all information and documentation supplied by the applicant is accurate, true and correct. Where any applicant (new, transfer to deceive the University and/or misrepresent facts , the University has the right to reject the application and/or dismiss/expel the student. In such cases, the applicant/student will lose any rights (academic or financial).

– No exemptions will be made from the mandatory documentary requirements unless an official authorization is received from the UAE MOHESR or CAA.

---

[2] Presenting false or misleading credentials on applications or other documents constitutes academic misconduct. For full information, see Academic Integrity & Misconduct Policy

5. The Director of Marketing and Enrollment with the support of the Recruitment, Admissions, and Scholarship manager manages and supports the admission process, in accordance with university rules and regulations. In doing so, they will:

- Prepare, implement and evaluate an annual student admission/enrolment plan according to caps and targets.
- Maintain up-to-date and secure student records (including online back-up files).
- Provide reports on the number of admitted and registered students in each semester by campus and by program to university management on a regular specified schedule and to departments and authorized individuals upon request.

6. Application forms and information are available online.

- Applications will be processed 5 times (Fall Term A, Fall Term B, Spring Term A, Spring Term B and Summer 1).
- Applications for admission may be submitted any time prior to the start of each term (by the end of drop and add period specified in the Academic Graduate Calendar).
- In each term, the final day for late registration is the last day of the Add/Drop period (see Academic Graduate Calendar on the University website).
- Applicants must pay a (non-refundable) application fee at the time of admission.
- Applicants will be notified of the outcome of their application within a maximum of two weeks after the application is submitted.

7. The Recruitment, Admissions and Scholarships Office staff will check each application and will hold any application where major documents are missing and/or admission criteria are

not met. Applicants will be requested to provide missing documentation and consideration of the application will be deferred until those are supplied.

8. Applicants who meet the admission criteria may be required to attend an academic department interview with the program coordinator or a representative of the academic department concerned and will be registered in courses agreed at this interview if the need arises.
9. Following assessment of the full application, the Recruitment, Admissions and Scholarships Office staff will issue the appropriate letter with the conditions (if any). The letter will include the student identification number and will be one of the following:
   New student with full admission.
- New student with conditional admission.
- Rejection of application.

10. Admission status is clearly indicated in the admission letter and is determined based on whether the student has fulfilled all admissions criteria. Full information on all admission status is set out in Appendix 3.

# Appendix -1General Documentation Requirements

1. All applicants to graduate University programs must provide the following documents:
- Application for admission (completed in full, signed and dated, fully submitted online).
- University payment receipt for the non-refundable application fee.
- recent passport-sized color photo of the applicant.
- Copy of passport.
- Copy of valid Emirates ID card.
- No Objection Letter from National Service Department (for male Emiratis).
- Original copy or attested copy of the following:
  - Bachelor's degree transcript of record.
  - Bachelor's degree certificate
  - Two letters of recommendation
  - Updated CV

2. Certificates issued by an HEI outside UAE must be attested, by specific authorities and in the following order:
   - By the country's relevant authority (e.g. Ministry of Education, Education Board, or British Council).
   - By the Embassy of the relevant country in the UAE.
   - By the UAE Ministry of Foreign Affairs.
3. The University will verify all certificates submitted by accessing the relevant institution's website and making enquiries by email.
4. The University will return the originals to the applicant and stamp the file copies with "Original Seen" (in all cases, whether the application is accepted or rejected). The University will not forward copies to another institution.
5. In addition to the mandatory documentation for all applicants listed above, specific programs may set extra requirements.
6. No exemptions will be made from the mandatory documentary requirements unless an official authorization is received from the UAE MOHESR or CAA.

## Appendix -2Language and other proficiency requirements for PG programs taught in English

- For PG programs taught in English, graduates from LU or HEIs where English is the language of instruction will be exempted from the English requirement provided an official document from the previous institution is provided. This exemption is subject to an interview with the College Committee.
- Holders of degrees where the language of instruction is not English are required to pass the English requirement by obtaining a score of 5.50 on IELTS, 530 on TOEFL (ITP is only taken at AMIDEAST), or 71 on IBT TOEFL, or an equivalent.
- Students who do not meet the required English proficiency requirement will be required to register for English Foundation course during their first semester

## Appendix -3Admission Status

### Regular Admission Based on Bachelor's Degree:

- A bachelor's degree from an accredited university recognized by the UAE's Ministry of Higher Education and Scientific Research
- Students may register for no more than six (6) credit hours during their first term of enrollment.
- To remain in good standing, a minimum CGPA of 3.00 (on a 4.00 scale) must be continuously maintained.

### Conditional Admission Based on a Bachelor›s degree from a major other than the Master program students are applying for:

- A bachelor's degree from an accredited university recognized by the UAE's Ministry of Higher Education and Scientific Research
- Register for 9 (nine) credit hours of pre-core courses during their first semester of enrollment and obtain a minimum GPA of 3.00 in each course.
- Students may be exempted from one or more remedial courses if the equivalent subject was successfully completed during their bachelor's program.

### Conditional Admission for students who have not satisfied the English requirement:

For PG programs where the language of instruction is English, applicants who have graduated from an HEI where the language of instruction is not English and who have not passed one of the required tests will be offered conditional admission to take English Foundation course during their first semester of enrolment along with a maximum of one graduate course unless they also need to take pre-core courses.

# Post graduate Admission

1. Re-admission applications must be submitted in person before the beginning of the semester. Re-admission applications will not be accepted where the student has an outstanding balance to pay.
2. Applicants for re-enrollment whose study at the University was interrupted for less than two years are eligible for re-admission as follows:

– Students in good standing who had withdrawn or otherwise interrupted their studies are eligible for re-admission to the same or another program.
– Students dismissed due to poor academic performance are eligible for re admission only to a different program.

- University graduates are eligible for re-admission to a different program.

3. All applicants for re-admission whose study at the University was interrupted for a period of two years or more are eligible for re-admission as follows:

- May join programs as shown for the categories in 2.
- Must present a valid English language proficiency certificate or exemption.
- Must meet specific requirements of the program (see Admissions Policy).

4. Where a student is re admitted under provisions of 3, they will be readmitted as a new student with a the same old ID number. Any transferable courses with a C grade or above will appear on the transcript as taken during previous study at the University.

5. Students who have been re-admitted must complete at least %30 of the new University program following the readmission date.
6. Admission requirements and application/admission processes are set out in the Admissions Policy.
7. The Recruitment, Admissions and scholarships Manager will maintain all admission records and report on admissions and readmissions to management on a regular basis and when required with the Vice President of Academic Affairs (VPAA).
8. The Recruitment, Admissions and scholarships Manager will make a comprehensive annual report on admissions and readmissions to the DOME.

# Transfer Admissions & Credit

1. A student may apply for transfer student admission to the University if they have previously studied for at least one academic semester (or equivalent) at an:

- HEI in the UAE licensed by the Ministry of Education.
- Institution outside the UAE accredited by that country's relevant ministry.
- Institution which has an articulation agreement with the University.

2. Students meeting the criteria in 1 will be considered for admission as follows:

- If their CGPA at the previous HEI is at least 2.00 they may be admitted to any appropriate program.
- If their CGPA at the previous HEI is less than 2.00 they may only be admitted into a program that is in a different field of study from their original area of study at the previous HEI.
- Transfer students whose UAE high school score is less than %60 may be admitted provided they have spent a full academic year at an accredited HEI and their cumulative GPA is 2.50 or above.

3. Candidates for admission as transfer students must:

- Apply to the Admissions Office with a completed Transfer Student Application Form, specifying the University program they wish to study.
- Fulfil all University admission requirements for the program of study applied, including English language proficiency and subject requirements, if any. They may not be admitted with conditional status.
- Provide all documents specified in the Admission Policy.
- Provide an official transcript from each HEI previously attended, showing all post-secondary study. This must be certified by the issuing HEI.

4. The decision to admit a candidate to the University as a transfer student is separate from and independent of the decision to award credits for previously taken courses.
5. Decisions on awarding University credit for study at a previous HEI are made by the department offering the program into which the transferring student is admitted. A candidate wishing to transfer credit from their previous HEI must:

- Apply to the Admission Office.
- Submit an official certified transcript issued by the HEI previously attended.
- Enclose the prospectus of the program they have been following and course description for courses where credit is requested.

6. The Transfer of Credit will be decided by the GE Department and College concerned and verified by the Senior Document Control Officer and monitored by the department manager before implementation.
7. Records relating to transfer admission and credit transfer will be maintained in the online student file by the Admissions Office.
8. The following criteria and conditions apply to each course being considered for credit

[3] Transfer students are admitted simultaneously to the University and the program.

transfer:

- It must have credit hours that are equal to, or more than, the equivalent course offered by University.
- It must have been passed with a grade C or above.
- It must be equivalent in terms of learning outcomes to the University course.
- A transfer credit may be granted for a combination of two courses or more.
- Students must complete at least %50 of the program at the University.
- Credit will not be given for courses for an internship, graduation project, capstone, or thesis.
- Credit will not be given twice for substantially the same course taken at two institutions, therefore either a course for which credit is transferred must replace a course taken at the University or the course is not transferred.

9. Transfer of credits for clinical training may only be considered if the training was undertaken in the UAE, or (in exceptional circumstances) following review and approval by CAA for a waiver to this requirement.
10. The result of the claim will be communicated in writing to the student prior to enrolment. When the claim is successful, the courses will be recorded in the student's record on SIS as Credit Transfer courses. Courses for which Credit has been transferred:

- Will be shown as credit-bearing on the student transcript.
- Will have the text 'credit transfer' in the Grade column.
- Will NOT be included in the GPA calculation.

11. The Recruitment, Admissions and Scholarships Manager will report on admission status including transfer students to University management to be used in future strategic planning..

# International & Exchange Student

1. The College is an academic community dedicated to the creation, dissemination, and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth, in pursuit of the UAE Vision of a knowledge economy. As part of its commitment to quality of campus life, the College aims through this Policy to ensure that international and exchange students are integrated into the campus community, receive appropriate support and resources, and have a successful and rewarding experience.
2. Under this Policy, international and exchange students have the same rights and responsibilities, including admissions requirements. Rights include access to campus resources and services, participation in extracurricular activities, and to express their opinions and beliefs freely. Responsibilities include complying with College policies and procedures, attending classes and completing coursework, and upholding the College Code of Conduct (which sets out expectations for academic integrity, student behavior, and campus safety).

## International students

3. All international students (College-sponsored or not) are subject to the same admissions requirements as domestic students. This includes meeting the same academic and language proficiency standards, submitting required documentation, and meeting any additional requirements for their specific program of study.

4. When an inquiry from outside the UAE is received, an automatic reply will be sent informing the applicant of this Policy and requesting required documents.
5. International students must provide the following documents with the appropriate application fee:

- High school certificate duly attested by the UAE Ministry of Higher Education and Scientific Research, Ministry of Foreign Affairs and Embassy of UAE in the country where the certificate is issued .
- Copy of passport (valid for at least 6 months).
- 1 passport size photograph.
- A letter confirming adequate funds (10,000 USD or convertible currency for tuition, accommodation and cost of living).
- Standard form indicating that the applicant will abide by College rules and regulations.
- Report from an evaluation service showing an average grade equivalent to the one specified by College admissions requirements.

6. If the applicant meets admissions requirements and accepts the offer letter, registration is subject to proof of payment of the international student fee.
7. International students sponsored by the College must sign an abiding letter that they will:

- Maintain full-time status.
- Remain in good academic standing.
- Pay a refundable deposit as required by the Abu Dhabi Department for Naturalization & Residence.
- Not accept any offer of employment while they are sponsored by the College.

## Exchange students

8. Candidates for exchange programs must meet College admission requirements, and provide the following documents four months before the expected date of enrollment:

- Completed application form (no application fee is charged).
- Official transcript from the home institution.
- Copy of passport.
- 2 passport size photographs.
- Original copy of TOEFL/IELTS or any other proof of English Proficiency.

9. Candidates will be informed of the application decision three months prior to the semester start date.
10. All transfer credits between institutions must be determined before the exchange takes place.
11. Students on a two-semester exchange program must successfully pass the first semester or will not be permitted to continue.
12. Specific details, conditions and requirements for each exchange program are set out in the relevant inter-institutional agreement. All provisions of these agreement apply.

## Support services

13. The College provides a range of support services for international and exchange students, including academic advising, language support, cultural orientation, and assistance with immigration and visa issues. It also offers programs and activities that promote cross-cultural understanding and help international students feel welcome and supported on campus.

---

[4] If attested certificates/transcripts are not provided students may receive conditional admission for one semester & must supply attested documents during this period or registration will be cancelled.

[5] Students can use the World Education Services (www.wes.org) or the American Association of Collegiate Registrars & Admissions Officers (www.aacrao.org), which provide the US academic equivalent of each certificate, diploma or degree. The College admissions letter will be issued to international students only after the credential evaluation is received.

# International & Exchange Student

1. The University recognizes that in exceptional circumstances there may be occasions on which earning credit in a course at another accredited academic institution may be considered appropriate to earn credit to be used to fulfill University degree requirements.
2. The conditions to be satisfied in order to permit a student to enroll in courses at another institution are as follows:

- The student must be a continuing student in good academic standing.
- Not permitting the request would delay the student's graduation.
- The course meets one of the following criteria:
  - It is not offered at the University in the current semester.
  - It is offered at the University but its scheduling conflicts with that of another required course.

3. The course to be taken must be equivalent to a University course, as defined in the Credit Transfer Policy.
4. The Registration Office will evaluate the student's request against the specified conditions and if the conditions are met, the request and all supporting documents will be forwarded to the relevant Dean.
5. If approved by the relevant Dean, the request will be submitted to the Vice President of Academic Affairs (VPAA) for final approval. The Registration Office will then inform the student and, if needed, issue a Letter of Approval to the other academic institution.

# Recognition of Prior Learning

1. LU is an academic community dedicated to the creation, dissemination, and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth, in pursuit of the UAE Vision of a knowledge economy. LU recognizes that program applicants may through prior informal learning and/or education have already acquired the competencies required for successful achievement of the learning outcomes of program courses. This Policy therefore sets how LU will approach requests for exemption on this basis . It is based on requirements of Commission for Academic Accreditation (Standards for Institutional Licensure & Program Accreditation, Dec 2019, Annex 20) and will be revised appropriately.
2. Prior informal education/learning may include publications, work experience and any other experiential non-classroom learning. LU describes the assessment and acceptance of such prior learning as Recognition of Prior Learning (RPL) and, to ensure an equitable transparent approach to considering RPL applications, the Policy covers the following sections:
   - Documentation required for consideration of RPL applications.
   - Criteria for granting RPL exemptions.
   - Process and authority for assessment and approval of RPL applications.
3. Applicants for RPL must submit the RPL application and supporting documentation (see Appendix 2) and any other relevant documents or evidence to demonstrate prior knowledge, skills and competencies that fulfil the learning outcomes of the relevant course(s) with their application for admission to LU. Applications will not be considered after program registration.

---

[6] Sometimes termed prior experiential learning

[7] Transfer of academic credits for courses taken at other institutions is covered in the Undergraduate Credit Transfer Policy and the Admission Policy.

4. All RPL applicants must take a competencies test to assess achievement of learning outcomes of the course(s), in line with the %80 minimum similarity required for transfer of academic credit.
5. RPL applications will be assessed by an academic committee assigned by the VPAA, consisting of two members of the department concerned and one from the General Education Department.
6. The committee will review each RPL application, the supporting evidence of knowledge/ learning/competencies previously acquired and the competence test result to determine whether the evidence of prior learning/experience matches the learning outcomes and rigor of the current LU course. Additional information may be requested from the student.
7. 7. In considering RPL applications, the following stipulations apply:
    - Credits awarded through RPL must not exceed %50 of total program credits.
    - Credits awarded through RPL must not exceed %25 of final year credits.
    - Credits cannot be awarded twice (and count towards student graduation requirements) for substantially the same prior learning.
8. Courses for which RPL exemption has been awarded under this Policy will be given a grade of Exemption (EX). This grade:
    - Will be annotated as RPL on the SIS.
    - Will show as EX in the Grade column on the student transcript.
    - Will be annotated as RPL on the student transcript.
    - Will be shown as credit-bearing on the student transcript
    - Will not be included in the AGPA Calculation.
9. The RPL application and supporting documents will be kept
    - In the ARD student file (in physical or digital format).
    - In the academic department (in soft copy) for reference and benchmarking.
10. 10. The applicant's program application will be considered in line with the provisions of the Admissions and Registration Policy.

# Remedial Courses

1. The University is an academic community dedicated to the creation, dissemination, and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth, in pursuit of the UAE Vision of a knowledge economy. As part of its commitment to a high-quality student academic journey, the University aims through this Policy to offer remedial courses that help applicants who do not meet one or more aspects of University academic admission requirements to address these areas and thereby enhance their overall educational experience.
2. Under this Policy, the University provides remedial courses which prepare an applicant for enrolling in a regular program by aiding rectification of area(s) academic deficiency. These courses are non-credit and do not count toward the requirements of an academic qualification. Remedial courses are provided in line with all internal and external regulatory guidelines (including those of the Commission for Academic Accreditation (CAA). This Policy sets out the details of University remedial courses, who is required to take them, and related duties.
3. University guidelines for remedial courses are as follows:
    - Non-credit remedial courses are required of an applicant who do not meet one or more aspects of University academic admission requirements, and therefore cannot be directly admitted to the relevant program.
    - Remedial courses have clear, measurable learning outcomes which must be achieved in order to pass the course.
    - Enrolment in non-credit remedial courses is permitted only for a specified period of time.
    - When the duration of enrollment in a remedial course is concluded, those who have successfully achieved its learning outcomes may be fully admitted to a credit-bearing

program, and those who have not will have to enroll into a different academic program that does not require this specific requirement.

4. All members of the LU community are required to support the implementation of this Policy. This includes:
    - The Vice President of Academic Affairs (VPAA), who will oversee its implementation through clear admission criteria, alignment with other policies and educational standards, and appropriate academic staff support and training.
    - Academic staff, (faculty members) who must deliver high-quality remedial courses with effective teaching strategies, provide support and guidance to students, and assess their progress. They must also stay updated on best practice in remedial education and actively participate in professional development activities related to their role.
    - Students, who must actively participate in remedial course by regularly attending classes, engaging in coursework, seeking assistance when needed, and making efforts to improve their academic performance.
    - Academic advisors and other relevant staff, who play a crucial role by guiding applicants to appropriate remedial courses, assisting them to develop academic improvement plans, monitor their progress, and provide guidance throughout the remediation process.
5. University remedial courses and related information is set out in Appendix 1In all cases, the remedial course(s) must be taken in the first semester, will not be credit-bearing and will not count towards the study plan.

# Registration

1. The University is committed to standard and transparent measures to record and manage all stages of the student life cycle. This Policy is based on University requirements for accurate information, the right of students to confidentiality and the expectations of the Commission for Academic Accreditation (CAA) and the Ministry of Higher Education and Scientific Research (MOHESR) regarding registration of students in Higher Education Institutions (HEIs).
2. Registration is the activity of recording the student's course choices for their program of study. This Policy sets out provisions for the registration of University students, including those related to:

- Course/student load, withdrawal, duration of study and extension.
- Course registration, drop and add period, withdrawal from courses, change of program/major, etc.

3. Student records are kept and retrieved from PeopleSoft Student Information System (SIS).
4. Registration is automated through the online system, which students can access using their ID and password. Prior to registration, students must consult with advisors for course planning/ scheduling and contact accounts for clearance.
5. After completion of their first University semester, students who have missing documents will not be allowed to register unless these documents are provided.
6. The minimum and maximum duration of study for the completion of a University degree complies with CAA/MOE requirements, as follows:
    - Diploma/Associate Degree: The minimum period of study is 1.5 years. The maximum period of study must not exceed 4 academic years (8 regular semesters). In exceptional circumstances, a one-year leave of absence may be added with the approval of the dean.
    - Bachelor's degree: The minimum period of study is 3 years. The maximum period of study must not exceed 7 years (14 regular semesters). In exceptional circumstances, a one-year leave of absence may be added with the approval of the dean.
7. Master degree: The minimum period of study is 1 years. The maximum period of study must not exceed 3 years (6 regular semesters). Students may request an extension to the study period (up to a maximum of one semester, renewable once) subject to the following:
    - Requests must include brief details of the reason for the extension, student progress and

the revised expected date of completion.
    - Requests must be approved by the dean for the first and renewed semester.
    - Students whose extension request is approved will be required to pay the appropriate fee.
8. Course loads for undergraduate students are as follows:
    - Regular semesters (Fall and Spring): up to eighteen (18) credit hours.
    - Short semesters (Summer ): up to six (6) credit hours.
9. Course loads for Graduate students are as follows:
    - Regular semesters (Fall and Spring): up to twelve (12) credit hours per semester, each term max load 6 CHR
    - Short semesters (Summer ): up to six (6) credit hours.
10. Exceptions/variations to the limits in 6 and 7 may only be made in the following cases:

- Students in their final graduation semester or term may register for a maximum of 3 additional credits.
- Visiting students may register for up to 18 credit hours per semester in undergraduate programs and up to 12 credits in graduate programs.
- Students on academic probation may register for up to 12 credit hours per semester (prioritizing any courses with F and/or D grades to be repeated) and up to 6 credits in graduate programs.

11. The course load defines whether student mode is full- or part-time as follows:
    - A full-time undergraduate student is defined as one taking between 12 and 18 credits per regular semester.
    - A part-time undergraduate student is defined as one taking less than twelve (12) credits per regular semester.
    - A full-time post graduate student is defined as one taking between 9 and 12 credits per regular semester.
    - A part-time post graduate student is defined as one taking less than nine (9) credits per regular semester.
12. In order to ensure an appropriate course load for each undergraduate student, personal limits are applied based on academic performance, as follows:

| Grade (CGPA) | Limit |
|---|---|
| CGPA >= 2.50 | Regular semesters: up to 18 credit hours<br>Short semesters: up to 6 credit hours |
| CGPA > 2.21 and < 2.49 | Regular semesters: up to 15 credit hours<br>Short semesters up to 6 credit hours |
| CGPA >= 2.00 and <= 2.20 | Regular semesters: up to 12 credit hours<br>Short semesters: up to 6 credit hours |
| CGPA < 2.00 | Regular semesters: up to 12 credit hours<br>Short semesters: up to 6 credit hours<br>Priority: courses with F and/or D grade to be repeated |

13. In order to ensure an appropriate course load for each post graduate student, personal limits are applied based on academic performance, as follows:

| Grade (CGPA) | Limit |
|---|---|
| CGPA >= 3.0 | Regular semesters: up to 12 credit hours<br>Short semesters: up to 6 credit hours |
| CGPA < 3.00 | Regular semesters: up to 6 credit hours<br>Short semesters: up to 3 credit hours<br>Priority: courses with F and/or C,C+,B- grade to be repeated |

14. Students must complete the registration process (in person or online) prior to the beginning of each semester (during the early registration period). Detailed steps are set out in Appendix 1 and the following points should be noted:
    - Prior to registration students must review the program requirements and discuss their course selection with their academic advisor in light of pre-requisites and courses to be repeated.
    - If a student wishes to register for a course not indicated by the program (eg alternative course, extra course(s) to graduate, etc), registration must be done in person and is subject to University policy and approval of the head of department (signed approval forms will be kept in the student file).
    - The first two weeks of the Fall and Spring semesters and the first week of the Short semesters are designated as the Drop and Add period. Specific regulations with regard to processing and refunds apply to these periods, as set out in Appendix 1.
15. Specific provisions cover course/program withdrawal, postponement, program transfer and withdrawal from the University (see Appendix 1).
16. The Registration Office will provide detailed statistics on the number of admitted and registered students in each semester by campus and by program to University management on a regular specified schedule and to departments and authorized individuals on request.

# Appendix -1Registration Procedures

## Registration

1. Students must complete the registration process (in person or online) prior to the beginning of each semester (during the early registration period).
2. Where a student has forgotten their password or had been suspended, they must show their student ID card at the Registration Front Desk to be provided with their access to online registration.
3. Before registration each semester, students may:
    - Identify the courses to be taken in the semester to satisfy the program requirements (study plans are available at Registration and from their advisor).
    - Meet their academic advisors and discuss course choices in light of E-advising recommendations, pre-requisites and courses to be repeated and any other academic probation requirements, then complete the course selection.
    - Where relevant, seek approval from the head/chair of department to register a course not indicated by the program (e.g. alternative course, extra course(s) to graduate, etc.) and register in person (signed approval forms will be kept in the student file).

## Drop and add period

1. The first two weeks of the Fall and Spring semesters and the first week of the short semesters are designated as the Drop and Add period. Specific regulations with regard to processing and

refunds apply to these periods.

2. Procedure for Drop and Add period in the Fall and Spring semesters:
    - When a student drops a course during the first and second calendar week of the Fall/ Spring semester, they will receive a refund as per Student Fees Policy.
    - After the Drop and Add period students may withdraw from courses only up to the last withdrawal day which is two weeks before the final exams. These courses will be marked W (Withdrawal) on the transcript. No refund will be given; refer to the Student Fees Policy.
    - The University reserves the right to cancel any course/level where the number of students registered does not meet the minimum required number of students. When the University cancels a course, students enrolled will be notified and given a refund of %100.
3. Procedure for Drop and Add period during short semesters:
    - Where a student drops a course during the first calendar week of the Fall/Spring semester, they will receive a refund as per Student Fees Policy.
    - After the Drop and Add period students may withdraw from courses only up to the last withdrawal day which is one week before the final exams. These courses will be marked W (Withdrawal) on the transcript. No fee refund will be given; refer to the Student Fees Policy.
    - The University reserves the right to cancel any course/level where the number of students registered does not meet the minimum required number of students. Where the University cancels a course, students enrolled will be notified and given a refund of %100.

## Withdrawal from a course

1. Academic advisors should advise students to withdraw from a course if they show poor performance in the mid-term exams. After the mid-terms, students may withdraw from a course up to the last withdrawal day (two weeks before final exams in Fall/Spring and one week before exams in short semesters ( Summer).
2. Students must complete the withdrawal request available in Student Information System (SIS). These courses will be marked W (Withdrawal) on the transcript.
3. No fee refund will be given.

## Postponement of study

1. In exceptional circumstances, students may postpone their study for a period not exceeding one (1) year (2 consecutive semesters), with the approval of the dean.
2. The period of postponement will not be computed as part of the maximum number of years of study.

## Withdrawal from the University

1. Students who wish to leave University before graduation must complete the Withdrawal Application Form available in SIS.
2. Official withdrawal will be granted and considered effective once the clearance procedure is completed.

## Change of major

1. Students may change their program/major during their study subject to the following provisions:
    - Students must meet the admission requirements of the new program/major.
    - Where the student's CGPA is 2.00 or above, all courses and grades will be accredited to them.
    - Where the student's CGPA is less than 2.00, only courses with C grade or above and available in new program study plan will be accredited to them.
    - Students must complete all requirements of the change of program/major process before the beginning of the semester.
    - Students must be registered on the new program/major for at least two regular semesters before graduating from it.

# Registration for Extra Courses

1. The University recognizes that in addition to registering for courses required by their study plan, students may wish to register for extra courses according to their academic interests and pursuit of knowledge. This Policy sets out the requirements relating to student registration for extra courses.
2. The University is clear that any extra courses and/or credit hours taken in addition to those specified for the program must not impact inappropriately on the student's academic standing and this Policy includes measures to ensure this.
3. Students will be permitted to register for extra courses subject to the following conditions:
   - A maximum of 15 credits may be registered for extra courses over the number of credits required for the student's registered program.
   - The total number of courses taken in any semester (required and extra) must not exceed the maximum stated in the Student Academic Load policy.
   - Extra courses which are not part of the student program study plan will not be counted towards the semester GPA or the cumulative GPA (i.e. they will be factored-out).
   - Extra courses (with credits and grades) will be included on the transcript and indicated by Out of Plan.
   - Students must sign a declaration (counter-signed by the dean and kept in the student file) that:
     - They have obtained faculty advice.
     - The choice to take extra courses is their own.
     - They understand that the extra courses will not count towards their GPA.
     - They understand that there is no guarantee that extra course/credits will be transferred to a University program in the future.
4. The Registration Office will determine whether any course is to be factored-out from the student's cumulative GPA, based on the following criteria:
   - The number of credit hours earned is more than the number of credit hours required for a University degree.
   - The course to be omitted is an elective course.
   - The course to be omitted is a student-chosen extra (non-program) course.

# General Education

1. The University is an academic community dedicated to the creation, dissemination, and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth, in pursuit of the UAE Vision of a knowledge economy. As part of its commitment to high quality programs, the University aims through this Policy to provide a general education program which facilitates the successful transition of new undergraduate students from high school to university life.
2. Under this Policy, the University delivers a comprehensive educational experience, equipping students with the skills essential to their future. The general education (GE) curriculum provides academic support, tools and techniques required for developing competencies in written and oral communication, AI literacy, qualitative reasoning, innovative and critical thinking, team building, leadership, entrepreneurship, ethical reasoning, design thinking, sense-making and use of social and emotional intelligence.
3. This Policy sets out how the University oversees its GE provision, and ensures that it complies with the requirements of the Ministry of Higher Education and Scientific Research (MOHESR) and the Commission for Academic Accreditation (CAA), and designs it to provide a broad-based education comprising skills and knowledge which prepare students to become responsible

citizens, critical thinkers, and effective communicators.

4. GE courses are offered through the General Education Department, and cover essentials areas of language (English and Arabic), mathematics, artificial intelligence, humanities, Islamic studies, UAE studies, innovation and entrepreneurship and social sciences. The GE curriculum for Bachelor and Diploma programs (see Appendix) is provided and annually updated in the University Catalog.
5. To achieve the objectives 33 credit hours for bachelor and 24 credit hours for Diploma programs of the GE program, all students must complete the equivalent of at least 21 credit hours of coursework, including:
    - English Language: At least one course to develop student proficiency in English and communication skills.
    - Arabic Language: At least one course to develop student proficiency in Arabic and communication skills.
    - Islamic Studies: At least one course providing an understanding of the basic tenets of Islam and its impact on society and culture.
    - UAE Studies: At least one course providing an understanding of the history, culture and social & economic developments of the United Arab Emirates.
    - Innovation, Entrepreneurship, and Sustainability: A course that explores the principles of innovation, entrepreneurship, and sustainability.
6. The GE program is well-planned, with specific learning outcomes, so as students proceed they will develop the skills in the program learning outcome of their respective programs.
7. The University evaluates student achievement of the GE learning outcomes every year. Results are used in an action plan for continuous program improvement.

## Appendix

The University General Education curriculum is comprised of the following courses:

### REQUIRED FOR All PROGRAMS (24 CH)

| Code | Course | CH | Pre-requisites |
|---|---|---|---|
| ENG100 | English I | 3 | |
| GEN100/GEN101 | Communication Skills in Arabic/ for Arab and non-Arabic speakers | 3 | |
| GEN102 | Islamic Culture (Arabic/ English) | 3 | |
| GEN105 | Emirates Culture and Society (Arabic/English) | 3 | |
| CIT101 | Introduction to Generative Artificial Intelligence | 3 | |
| GEN201 | Psychology (Arabic/ English) | 3 | ENG100 |
| GEN304 | Ethics (Arabic/English) | 3 | ENG100 |
| GEN302 | Fundamentals of Innovation and Entrepreneurship (Arabic/English) | 3 | ENG100 |

### REQUIRED FOR ALL BACHELOR PROGRAMS (6 CH)

| Code | Course | CH | Pre-requisites |
|---|---|---|---|
| ENG104 | English II | 3 | ENG100 |
| GEN103 | Logic and Critical Thinking (Arabic/English) | 3 | ENG100 |

### ADDITIONAL REQUIREMENT FOR BUSINESS ADMINISTRATION/MEDIA & PUBLIC RELATIONS/IT (3 CH)

| Code | Course | CH | Pre-requisites |
|---|---|---|---|
| MTH105 | Mathematics & Statistics | 3 | |

### ADDITIONAL REQUIREMENT FOR ENGINEERING/ HEALTH SCIENCES (3 CH)

| Code | Course | CH | Pre-requisites |
|---|---|---|---|
| MTH110 | Calculus I | 3 | |

# General Education

1. The University is committed to the provision of an academically sound program offering. This Policy stipulates the University-wide requirements that apply to each academic program, in order to ensure that students can only graduate after completing the appropriate scheme of study.
2. Program completion requirements apply to all programs and are specific to each level of study.
3. Overarching University requirements applicable to all students are as follows:
    a. Grade Point Average: All students must successfully complete all course requirements and other activities specific to their specialized study plan. The CGPA of each undergraduate graduating student must be at least 2.0 out of 4.0 at the time of graduation. The CGPA of each graduate graduating student must be at least 2.0 out of 4.0 at the time of graduation.
    a. Credit Transfer: The maximum approved transfer credits must not exceed %50 of the total credits towards graduation. A minimum of %50 of the program credit hours must be earned at the University.
    a. Study Plan: Each program will have a specified study plan which specifies the courses that students must take in order to graduate. Study plans will include University requirements, major requirements, and elective courses, if applicable.
2. The minimum and maximum duration of study for the completion of a University degree complies with CAA/MOE requirements, as follows:
    - 4.1 Diploma/Associate Degree Level: The minimum period of study is one and a half (1.5) years. The maximum period of study must not exceed four years (8 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of exceptional circumstances, with the approval of the Vice President of Academic Affairs (VPAA).
    - 4.2 Bachelor Level: The minimum period of study for Bachelor students is three (3) years. The maximum period of study for Bachelor students must not exceed seven (7) years (14 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of unforeseen circumstances, with the approval of the VPAA.

- 4.3 Master Level: The minimum period of study for Master students is two (2) years. The maximum period of study for Master students must not exceed four (4) years (8 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of unforeseen circumstances, with the approval of the VPAA.

# Examination

1. The University is committed to creating a student-centered learning environment conducive to student intellectual and personal growth. It has therefore developed a set of assessment policies to ensure rigorous assessment of student learning through various assessment instruments, constructed at an appropriate level and to reflect a fair picture of student achievement. All assessment instruments (assignments, projects, exams, etc.) will be designed, implemented, assessed and moderated in full compliance with University quality criteria and academic staff will be provided with training in designing assessment instruments and assessing student work. The Examination Policy should be read in conjunction with the University Assessment & Grading Policy.
2. This Policy is established to ensure University examinations are conducted in line with principles of academic integrity, fairness and rigor. This Policy focuses on final examinations, conducted outside normal class time, however its provisions apply to all examinations. This Policy is guided by three general principles:
    - The examination process is inherently stressful and must be managed so as to minimize confusion, uncertainty and stress.
    - The exam environment must allow students to reflect upon what they have learned with minimum disruption and distraction.
    - Responsibilities, rules and regulations governing exam administration and conduct must be well publicized so they are clearly understood by students and academic and administrative staff before the exam period begins.
3. 3. In preparation for examinations, Registrar Office ) will:
    - Provide subject-specific exam guidelines to students and academic staff.
    - Ensure students receive the full exam timetable (locations, times and durations) in advance and a minimum of two weeks before the exam period.
    - Endeavor to schedule exams fairly for each student across the exam period, with due regard to prayer timings, course combinations and avoiding (where possible) students having to take more than two exam per day.
    - Ensure exam rooms are quiet and free from unnecessary and unreasonable disruption; suitable in terms of temperature, workspace, cleanliness and configuration; provide sufficient space to ensure academic integrity.
    - Take all practical measures to anticipate and prevent disruption of exams.
4. The course coordinator , course instructor and invigilator(s)/proctor(s) all have specific responsibilities regarding exam administration, as follows:
    - Each College/Department will:
        - Arrange for invigilators/proctors and ensure they are informed about their schedules and roles.

---

[8] Where no course coordinator is appointed, the course instructor is responsible for all aspects of exam administration, including those indicated in this Policy as for the course coordinator.

    - Plan for backup invigilators/proctors in case of emergencies.
    - Arrange for copying final exam papers and delivery of exam envelopes to invigilators/ proctors one hour before the exam.
    - Be available during the exam days to resolve potential issues.
  - The course instructor will:
    - Circulate between exam rooms a minimum period of 30 minutes during the first hour of the exam duration to answer student questions.
    - Be available in his/her office for the rest of the exam duration.
  - The invigilator/proctor will ensure the proper conduct of the examination in the exam room. Specific mandatory instructions must be followed (as set out in Appendix 1 to ensure the integrity of the examination process.
5. Examination Security: Colleges/Departments are responsible for the integrity of the exam paper (and related material) and for its security at all times. The following points are mandatory:
  - No exam material may be left unattended at any time (including hard and electronic copies of exam papers or related material).
  - When a new exam paper is prepared, it must be kept on a storage media (such as flash memory) and must be saved with a password.
  - Printed copies of the exam paper must not exceed the number of students plus two.
  - In the exam room, students must not look at the exam paper until instructed to do so. When the exam ends, students must place the exam paper inside the answer script before leaving the exam room. The exam invigilator/proctor must verify that every answer script has the exam paper and must collect any missing paper from the student(s) concerned.
  - When marking the exam, the course instructor must destroy all exam papers inside the answer scripts.
6. Students must attend all exams. A zero mark will be given to students who do not attend an exam. In exceptional circumstances, where there is an acceptable reason for absence (e.g. sickness), an alternative date will be set to allow the student to re-sit the exam, but only on provision of written evidence of one of the following situations:
  - Sickness (requires a medical report stamped by the Ministry of Health).
  - Death of a family member.
  - Accidents (e.g. car accident).
  - Natural causes such as heavy storms.
7. Instructions for the conduct of university examinations are set out in Appendix 1 and must be followed, by all academic and administrative staff and students.
8. In addition to the conduct of examinations, other assessment process are carried out at appropriate stages and specific procedures apply. These stages are all covered by the and are as follows:
  - Assessment and grading: each process has clear rules, rubrics and systems, as set out in the Assessment & Grading Policy.
  - Students with exceptional circumstances: ensuring proper consideration of matters that fall outside the norm (e.g. students with special needs; students with personal mitigating circumstances; and students found guilty of academic misconduct). These are set out in the Students of Determination Policy and the Academic Integrity and Misconduct Policy.
  - Student appeals: providing a transparent mechanism for students to raise a concern or appeal against results of coursework or final exam assessment, on relevant grounds (other than academic judgment), as set out in the Grade Appeals Policy.
9. The University has a zero-tolerance approach to cheating, plagiarism and other forms of academic misconduct and will apply strict penalties in proven cases, as set out in the Academic Integrity Policy.

# The Assessment & Grading

The University is committed to creating a student-centered learning environment promoting student intellectual and personal growth. It has therefore developed a set of assessment policies to ensure rigorous, consistent and fair assessment of student learning through assessment instruments at an appropriate level which reflect a fair picture of student achievement. All assessment instruments (assignments, projects, exams, etc.) will be designed, implemented, assessed and moderated in full compliance with University quality criteria and academic staff will be provided with training in designing assessment instruments and assessing student work. This Assessment & Grading Policy should be read in conjunction with the University Examination Policy.

## Assessment

1. The University is committed to quality assessment with two purposes:
   - Assessment of learning, i.e. documenting student performance.
   - Assessment for learning, i.e. provision of feedback on performance so that:
     - Students can learn better, improve results, reflect on learning experiences, adjust learning strategies and skills and identify where they need help.
     - Academic staff can reflect on delivery strategies, make necessary adjustments, track student progress and identify those needing extra help.
2. Academic staff will therefore develop assessments that serve both purposes. Assessments are grouped into three major types: diagnostic, summative and formative (full definitions are provided in section 6) and use different assessment methods (either traditional or alternative/ authentic), depending on the discipline, the nature of the individual course and the intended learning outcomes.

| Traditional | Alternative/authentic | |
|---|---|---|
| Tests | Papers | Exhibitions |
| Exams | Presentations | Portfolios |
| Assignments/homework | Projects | Self-assessment |
| Essays | Practical work | Case studies |
| Reports | Capstone course or graduation project | |
| | Performance (observed / judged) | |

3. The following overarching University regulations apply:
   - To pass a course, a student must achieve at least a %60 mark (i.e. D grade)
   - A semester GPA of 2.0 or above is required for good academic standing.
   - A cumulative GPA (CGPA) of 2.0 or above is required to graduate.
   - Coursework (assignments, projects etc.) must be submitted in soft copy with evidence of originality, normally generated from University-authorized similarity detection software (e.g. Turnitin or Safe Assign)
   - Coursework must be handed in by the due date. Work submitted late will incur a reduction of %15 of the mark per day. In specific exceptional circumstances and only on provision of appropriate written evidence a student may be allowed to submit coursework at a later date .
   - Every course will end with a final examination of two hours duration, unless otherwise stated in the course syllabus.
   - Where a course has a final exam, students must attend. A zero mark will be given for non-attendance (in line with the Examination Policy). In specific exceptional circumstances and only on provision of appropriate written evidence a student may be allowed to take the exam at a later date2.

[9] In such circumstances, the provisions of the Mitigating Circumstances Policy apply.

## Grades

1. Grades measure student performance and serve as a means of determining two important outcomes: academic standing and graduation eligibility. The University has a timely and rigorous process for academic staff to evaluate student work for all programs. Overall course grades are derived from a combination of grades from examinations, class participation, quizzes/tests, projects and assignments, etc. The method of grading and the weighting towards the overall grade for the course will be explicitly stated in every course syllabus and clarified by the academic staff teaching the course at the beginning of the semester. It must not be altered during the semester. During the semester, students will receive updates on their progress.
2. University Grading System

### Undergraduate Grading System

| Marks | Grade | Credit Points | Description |
|---|---|---|---|
| %100 - %90 | A | 4.0 | Excellent Performance |
| %89 - %87 | A- | 3.7 | |
| %86 - %84 | B+ | 3.3 | Very Good performance |
| %83 - %80 | B | 3.0 | |
| %79 - %77 | B- | 2.7 | |
| %76 - %74 | C+ | 2.3 | Good Performance |
| %73 - %70 | C | 2.0 | |
| %69 - %67 | C- | 1.7 | |
| %66 - %64 | D+ | 1.3 | Satisfactory performance |
| %63 - %60 | D | 1.0 | |
| %59 - %0 | F | 0.0 | Unsatisfactory performance / Failure |

### Graduate Grading System

| Mark | Grade | Grade Points | Remarks |
|---|---|---|---|
| %100-90 | A | 4.0 | Excellent |
| %89-87 | A- | 3.7 | Meets Expectation |
| %86 - 84 | B+ | 3.3 | |
| %83 - 80 | B | 3.0 | |
| %79 - 77 | B- | 2.7 | Below Expectation |
| %76 - 74 | C+ | 2.3 | |
| %73 - 70 | C | 2.0 | |
| %69 - 0 | F | 0 | Failure |

### Withdrawal and non-credit

| Mark | Grade | Grade Points | Remarks |
|---|---|---|---|
| No Mark | I | No Impact on CGPA | Incomplete Course |
| No Mark | W | No Impact on CGPA | Withdrawal from a course without academic penalty |
| No Mark | EW | No Impact on CGPA | Enforced withdrawal from a course due to poor academic performance |

| | | | |
|---|---|---|---|
| No Mark | TC | No Impact on CGPA | Transferred credit from other Higher Education Institution |
| No Mark | NC | No Impact on CGPA | Non-credit course |
| No Mark | EX | No Impact on CGPA | Exempted course |
| No Mark | IP | No Impact on CGPA | In Progress |
| No Mark | EWA | No Impact on CGPA | Enforced withdrawal from a course due to low attendance rate |
| No Mark | Pass | No Impact on CGPA | Non-credit course |
| No Mark | Fail | No Impact on CGPA | Non-credit course |

## CGPA Schema

| Merits in English | CGPA (out of 4) | Merits in Arabic |
|---|---|---|
| Excellent with Honor | 4.00 - 3.90 | امتيازمعمرتبةالشرف |
| Excellent | 3.89 - 3.60 | ممتاز |
| Very Good | 3.59 - 3.00 | جيد جدا |
| Good | 2.99 - 2.50 | جيد |
| Satisfactory | 2.49 - 2.00 | مقبول |

1. 3. A Dean's Honors List is published by the University at the end of every regular semester, to recognize academic excellence. Students on the List receive a recognition letter from the VPAA. To be included a student must:
   - Have registered and completed a minimum of 12 credit hours that semester.
   - Be in good academic standing.
   - Have a minimum semester of 3.7 GPA.
   - Have no fail or incomplete grades in any course.
   - •Not be subject to any disciplinary or academic misconduct action.
2. The award grade for students who pass the required courses will be determined from the cumulative GPA (CGPA), computed as follows:
3. Each course in the program is assigned a credit value (credit hours) typically on the basis of one credit for each contact lecture hour per week.
4. The grade point for each subject is calculated by multiplying the credit hours of the course by the credit points received for that course (grade C corresponds to 2.0 credit points).
5. The cumulative GPA is calculated by dividing the total number of grade points accumulated for all attempted subjects by the total number of credits of these courses.
6. Every student's record will contain a computation of the GPA for each semester individually and an accumulated GPA for the overall program.
   - The calculation does not include the units for which the student gets credit due to exemption (which appear on the transcript as EX).
   - Students must maintain a cumulative GPA of at least 2.0 in order to be in good academic standing. A CGPA of at least 2.0 is required for graduation.
   - PG Students must maintain a cumulative GPA of at least 3.0 in order to be in good academic standing. A CGPA of at least 3.0 is required for graduation.
   - A Student may repeat any course to increase his/her CGPA. In that case, the higher of the two grades is included in the updated CGPA.

## Assessment & Grading Duties

1. The task of achieving high quality assessment requires collaboration between those with specific responsibilities for aspects of assessment:
   - The Dean, who must:
     - o Ensure that College has its own discipline-specific assessment guidelines consistent

with University assessment guidelines.
    - Ensure that these guidelines and procedures are periodically reviewed.
    - Ensure that departments use assessment results for program improvement.
- The department Head:
    - Collaborate with faculty members in developing assessment guidelines and procedures that are appropriate to their major fields.
    - Ensure that faculty members implement these guidelines and procedures.
    - Ensure that faculty members inform students of assessment criteria.
    - Review assessment methods and criteria.
    - Ensure that assessment results are used for continuous improvement of learning and instruction.
- Academic staff teaching courses, who must:
    - Inform students in the course syllabus and at the beginning of the semester the due date for each class assignment or project and the penalties applicable to late submission.
    - Inform students at the start of the semester of assessment methods and criteria that will be used in assessing their performance and achievement.
    - Provide students with timely and constructive feedback on performance (ie grades and comments) and how it can be improved.

## Course Files/Portfolios

1. Academic staff teaching courses must each maintain for the purpose of internal/external assessment and evaluation, a course portfolio containing the items specified in the approved University checklist.
2. Academic staff are individually responsible for ensuring that every item in the course portfolio has been approved according to University requirements before use.

## Academic Misconduct

1. The University has a zero-tolerance approach to cheating, plagiarism and any other academic misconduct and will apply strict penalties in proven cases, as set out in the Academic Integrity Policy.

## Grade Appeals

1. The University has a Grade Appeals Policy providing for students to appeal against the grade(s) assigned. Valid grounds of appeal are 'procedural' (e.g. marks not added up correctly; assessment component omitted from final grade; etc.): students may not appeal against academic judgment of the examiner/assessor.

## Assessment & Grading For E-Learning/Hybrid Delivery

1. The University ensures through its Blended Learning Policy that courses using face-to-face delivery and e-learning/hybrid delivery have identical learning outcomes and that equivalent rigor is required in the quality of student performance and in the assessment of learning outcomes and grades assigned. This guarantees an equivalent learning experience regardless of delivery mode.

## Definitions

1. Assessment: the gathering of evidence of student learning and achievement to guide instructional decisions and aid student learning. There are three types:
    - Diagnostic: usually conducted at the beginning of the semester and used to identify student strengths and weaknesses, providing information to help students and academic staff build on strengths and remedy weaknesses.
    - Formative: conducted throughout the semester and used to enhance the learning and teaching process. Outputs help students improve study skills, learning strategies and achievement and ongoing progress and help academic staff diagnose and respond to student needs.
    - Summative: usually carried out at the end of the semester and used to determine the extent to which students have achieved course learning objectives or outcomes It helps academic staff make decisions and judgments for purposes of grading function, student progress and/or graduation.

2. Full definition of terms marked * in grading system (see 9):

| | |
|---|---|
| Academic Standing | The student may be in one of the following academic standings at a given time: good standing, on probation or suspension. |
| Good Standing | A student with a minimum CGPA of 2.0 |
| Probation | A warning to the student due to unacceptable academic attainment. |
| Credit Hour | A credit is equivalent to One lecture hours / Week. 2 to 3 laboratory hours / Semester are equivalent to 1 credit hours |
| Load | Total number of credits the student is registered for in a given semester. |
| Transcript | The chronological, permanent and most complete student educational record document, containing all course and program results/outcomes, academic standing, grades and GPAs (including incomplete grades, failures and withdrawals) and all academic awards, majors, minors and concentrations. It is issued to each student on graduation (unless they have outstanding financial accounts) and a certified copy is kept on file in the Registrar's Office. |
| GPA | Grade point average. |
| CGPA | Cumulative grade point average |
| Exemption | Exemption from a course. Refer to English language Proficiency for details. |
| Incomplete | Given when for an approved reason beyond the student's control (eg illness) he/she has been unable to complete course required work before the end of the semester, given that he/she completed all course work except the final exam. |
| In progress | |
| | Assigned for incomplete internship and/or graduation project and must be addressed no later than the end of the next academic semester. If not, grade is automatically changed to F. |
| Non-Credit | Where a student is allowed or required to participate in the course on the basis that no credit will be given towards GPA. |
| Transfer Credit | Transfer credit is available for successful completion of a course from an accredited higher education institution. Transferred courses grades are not calculated in GPA. |
| Withdrawal | Student officially leaves a semester or an individual course. |
| Enforced Withdrawal | Student is forced to withdraw by instructor recommendation, in line with University rules and regulations. |

# Program Completion

1. The University is committed to the provision of an academically sound program offering. This Policy stipulates the University-wide requirements that apply to each academic program, in order to ensure that students can only graduate after completing the appropriate scheme of study.
2. Program completion requirements apply to all programs and are specific to each level of study.
3. Overarching University requirements applicable to all students are as follows:

    3.1 Grade Point Average: All students must successfully complete all course requirements and other activities specific to their specialized study plan. The CGPA of each undergraduate graduating student must be at least 2.0 out of 4.0 at the time of graduation. The CGPA of each graduate graduating student must be at least 2.0 out of 4.0

at the time of graduation.

3.2 Credit Transfer: The maximum approved transfer credits must not exceed %50 of the total credits towards graduation. A minimum of %50 of the program credit hours must be earned at the University.

3.3 Study Plan: Each program will have a specified study plan which specifies the courses that students must take in order to graduate. Study plans will include University requirements, major requirements, and elective courses, if applicable.

4. The minimum and maximum duration of study for the completion of a University degree complies with CAA/MOE requirements, as follows:

4.1 Diploma/Associate Degree Level: The minimum period of study is one and a half (1.5) years. The maximum period of study must not exceed four years (8 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of exceptional circumstances, with the approval of the Vice President of Academic Affairs (VPAA).

4.2 Bachelor Level: The minimum period of study for Bachelor students is three (3) years. The maximum period of study for Bachelor students must not exceed seven (7) years (14 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of unforeseen circumstances, with the approval of the VPAA.

4.3 Master Level: The minimum period of study for Master students is two (2) years. The maximum period of study for Master students must not exceed four (4) years (8 regular semesters) after satisfying the English admission requirement. A one-year leave of absence may be added to this period in light of unforeseen circumstances, with the approval of the VPAA.

# Internship

1. The University is an academic community committed to the educational and personal growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the UAE Vision of a knowledge-based economy. In furtherance of this commitment, the University focuses on international best practices and a student-centered learning experience that includes activities with real-world relevance and develops skills with life-long impact, to meet the challenges of a rapidly changing, globally connected world. This Policy sets out how the University will deliver a high-quality internship course for all students.
2. Internships or clinical training are an integral part of Bachelor programs offered by the University and offer a period of practical experience in an organization related to the field of study, allowing students to integrate academic theory and real-world practice in a professional setting and thereby promote employability and professional ethics. Internship providers are selected based on their reputation, the internship relevance, and ability to offer valuable learning opportunities to students, aligned with course and program learning outcomes.
3. Internships contribute to program learning outcomes at the relevant QFEmirates level. In line with these, and with internationally recognized good practice for internships, the following overarching provisions apply:
    - All external locations used for internships will be approved by academic supervisors following evaluation against national regulations relating to employment, occupational environment, and health & safety.
    - Internship assignments will be aligned with the expected learning outcomes of the relevant academic program.
    - Internships will bear a number of credit hours according to the study plan of each program.
    - During the internship students will be:
    - Given a clearly defined framework for participation and learning.

- Supervised by an academic supervisor, who will monitor progress, resolve any concerns and conduct the final assessment.
- Monitored and evaluated by a site supervisor, who will liaise with the academic supervisor.
- Internships may be undertaken during regular Fall and Spring semesters. They can also be taken during two consecutive short summer semesters.

4. The student will receive an internship job description aligned with program and course learning outcomes and sign an Internship Agreement that sets out expectations for attendance, learning, and performance, and the supervision arrangements and duties of the academic supervisor and the site supervisor.
5. 5. During the internship, the student must:
    - Organize his/her own transportation to and from the internship site.
    - Maintain confidentiality of all sensitive organizational information.
    - Inform site and academic supervisors of any lateness or non-attendance.
    - Not act unlawfully or offensively, so as to harm the University or the organization's reputation; in such cases the internship will be terminated immediately.
    - Return all organization property upon completion of the internship.
    - Act professionally at all times (e.g. follow dress code, be on time for work and meetings, be polite and considerate, avoid personal calls during work hours, etc.).
6. Supervision of the internship is conducted by two key individuals:
    - Academic supervisor: an academic staff member from the relevant department, assigned to provide academic supervision, act as student mentor, support achievement of learning outcomes, and assess/grade the internship course. S/he is the link between the University and the organization hosting the internship and will visit periodically the student at the work location during the internship, meeting with student and site supervisor to discuss the student's professional performance. Visits also allow the student to express any concerns about the work environment.
    - Site supervisor: a person from the internship hosting organization whose qualification/ position matches internship requirements, who is responsible for on-site supervision, monitoring, guidance, and direction. Towards the end of the internship period, they provide the academic supervisor with informal overall feedback/evaluation on the student's performance.
7. The academic supervisor load is based on hours required for visits, interaction with the site supervisor, student presentations and reports, as set out in the Internship Supervision Policy.
8. Student final submission: At the end of the internship the student submits for assessment and grading by the academic supervisor, the following two items:
    - Report: including a detailed description of the tasks completed, the contributions made to the organization and a critical analysis of their work experience, including (in the report and/or oral presentation) a reflection on their achievement of course learning outcomes.
    - Presentation: which covers the same elements as the Report, in particular the reflection and critical analysis.
9. Grading the internship: The assessed components (academic supervisor assessment, student final report, student oral presentation) are each assessed separately by the academic supervisor and possibly the faculty members using specific rubrics. Summation of the components results in a final grade. The internship is graded according to the University grading system, and the student must achieve %60 to obtain a pass.

# Intensive Mode of Delivery

1. The University is an academic community dedicated to the educational and personal growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the UAE Vision of a knowledge-based economy. The University is committed to academic quality and international best practice, and this Policy sets out provisions to ensure that programs and courses offered in intensive mode are of the same quality and achieve the same learning outcomes as those offered over a traditional semester period, and fully comply with the requirements of the Commission for Academic Accreditation (CAA).
2. The University academic calendar complies with CAA requirements for semester length , and consists of two regular semesters of 15 weeks (Fall and Spring) and optional short semesters of 6 weeks (in Summer).
3. The following conditions apply to every University course offered in intensive mode:
    - It must include the number of contact hours specified by CAA for the course type (e.g. lecture courses must have 15 contact hours per credit hour).
    - It must deliver the full content of the approved syllabi, including assignments and assessment schemes.
    - It must require students (as far as possible) to sit through the same assessment as those studying in “normal” mode, including the need to achieve all course learning outcomes.
    - If the same assessment is not feasible, then internal moderation and quality assurance systems must ensure equal rigor and standards.
    - It must have comparable expectations as when offered during the regular semester.
    - It must allow sufficient time for preparation, reflection on learning materials, analysis, understanding of topics, research and learning outcomes achievement.
    - Courses such as major student projects are not typically suitable for an intensive mode delivery.
4. In addition, during the intensive delivery period students must be:
    - Fully informed of any operational modifications to course/program delivery that may have been made.
    - Able to access all student services (e.g. library access/support, IT labs/support, specialized laboratories, catering, health services, and recreational facilities)typically available during the regular semester.
5. Courses taught in intensive delivery mode are included in the faculty load calculation.
6. Students may register for a maximum of 6 credit hours in each short semester. No exceptions will be granted, except for students in their final graduation semester under the provisions of the Course Load Policy.

# Academic Integrity & Misconduct

1. The University is an academic community dedicated to the creation, dissemination, and application of knowledge. It is committed to fostering an intellectual and ethical environment based on the principles of academic integrity. Academic integrity is essential to the success of the University›s mission and violations of academic integrity constitute serious offenses against the entire academic community.
2. As part of its commitment to the highest standards of integrity in all its academic activities, the University expects similar high standards from its students during their academic journey. All University students are personally responsible for ensuring that the work they do for their program meets University standards for academic integrity.
3. This Policy and its provisions provide the framework for student academic behavior in the

context of ethics and integrity to ensure that these standards are met. The stipulations of this Policy will ensure that students:

- Understand the definition of academic integrity (4).
- Realize why academic integrity is important (5).
- Recognize acts of academic misconduct, i.e. violations of integrity (6).
- Fully comprehend the penalties for academic misconduct (7).

4. The definition of academic integrity in the student context is academic behavior that adheres to the following principles:
   - Proper acknowledgement and citation when using ideas/results/words of others.
   - Proper acknowledgement of all contributors to a given piece of work.
   - Ensuring that all work submitted as his/her own in a course or other academic activity is produced without using unsanctioned materials or unsanctioned collaboration.
   - Obtaining all data and results by ethical means and reporting them accurately without suppressing any results that are inconsistent with his/her interpretation and conclusion.
   - Treating all other students in an ethical manner, respecting their integrity and their right to pursue their educational goals without interference.
   - Ensuring never to facilitate academic misconduct by any other student and never to obstruct another student's academic progress.
5. Academic integrity is important because its principles ensure that:
   - Everyone is given proper credit for his/her ideas, words, results and other scholarly accomplishments.
   - All student work is fairly evaluated, and no student has an inappropriate advantage over others.
   - The academic and ethical development of all students is fostered.
   - The reputation of the University for academic integrity is enhanced.
6. Acts of academic misconduct (violations of academic integrity) may occur in several contexts and in several forms. Examples are set out below.
   - Cheating is an act that diminishes the learning process and is intended to gain grade or academic advantage without doing the intellectual work to merit the grade or degree. Examples include (but are not limited to):
     - Copying another person's test answers during exam.
     - Exchanging information regarding an exam during an exam.
     - Copying from notes (on clothing, piece of paper, the body, electronic devices e.g. mobile phone/calculator, etc.) in an exam.
     - Obtaining a copy of or information about an exam ahead of time.
     - Looking up answers in a book during a closed book exam.
     - Buying projects and term papers.
     - Copying from someone else's paper, project, or assignment, or using AI tools to create assignment and projects
     - Using notes/books during exams unless specifically allowed.
     - Hiring a surrogate test taker.
     - Bringing forbidden materials (e.g. calculators, computers, books or notes) into the exam unless specifically allowed.
     - Communicating with other students during an exam.
     - Using a mobile phone, tablets, earphones, Bluetooth devices, or any digital device during an exam or having it at an exam desk.
   - Plagiarism is a specific form of cheating which means representing work of another person as the student's own without acknowledgment (and therefore not writing the work they have submitted for grading) or using AI tools to produce part of an assignment and a project. While students may use direct quotes and pieces of text, these should be used to support ideas, must be properly cited and must not exceed %20 of the work . Examples include, but are not limited to:
     - Using text from an author without citation.

    - Submitting the same document in two different courses and submitting it as original work.
    - Using AI tools for assignment and projects or using all/part of another person's paper or outline or work.
- Fabrication of data is falsifying/inventing any information/citation in an academic exercise and must not be used in any laboratory experiment or research project. Examples include (but are not limited to):
    - Deliberately misreporting results of an experiment or field research.
    - Inventing data or resources for written oral or other presentations.
    - Inventing case studies or facts in reports, papers, or presentations.
- False credentials is presenting incorrect/misleading documents (applications, CVs, etc.) during study. Examples include (but are not limited to):
    - Claiming degrees/qualifications that were not earned.
    - Failing to report schools, or universities attended.
    - Presenting falsified transcripts or other information.
    - Falsely claiming employment.
    - Misrepresenting residency status.
    - Using a fake ID card.
- Collusion occurs when students work together on an assignment where "working together" is not allowed, or if students copy from each other .
- Free-riding is where, when assigned to work in a collaborative group with all students participating in the activity/project, a student does not contribute to the task or cannot demonstrate their contribution.
- Academic sabotage is deliberately impeding the academic progress of others. Examples include (but are not limited to):
    - Intentionally destroying or obstructing another student›s work.
    - Stealing or defacing books, journals and/or other library resources/material.
    - Altering or damaging computer files that contain data, reports or assignments that belong to another student.
    - Removing posted or reserve materials or otherwise preventing other students from accessing it.
- Misuse of intellectual property is the illegal use of copyright materials, trademarks, trade secrets or intellectual properties. Students must not violate the University Copyright Policy concerning the fair use of copies.

7. Penalties for academic misconduct (academic integrity violations) will be imposed by the University, including (but not limited to) one or more of the following:
    - Verbal warning/written warning.
    - Expulsion from classrooms.
    - Banning students from attending one or more lectures.
    - Banning students from participating in the activity he/she has abused.
    - Requiring substitution and/or repair of what has been damaged.
    - Voiding result(s) of the exam in which misconduct was committed.
    - Suspending the student for a week/semester/longer period.
    - Assigning a zero to a test/assignment where misconduct was committed.
    - Assigning «F (Fail)» Grade to the course.
    - Enforced Withdrawal «EW» to the course.
    - Suspension/final dismissal/expulsion from the University.
8. All students, academic staff members and relevant administrative staff have a role in upholding academic integrity.
    - Students must understand the principles of academic integrity and abide by them in all aspects of their University work. They are also strongly encouraged to bring all alleged violations of academic integrity they may encounter to the attention of the appropriate authorities.

- Academic staff must keep their students informed about this Policy and any other University regulations relating to academic integrity. They must also educate students about the importance of academic integrity. In relation to their own course students and advisees, academic staff must:
  - Inform students of requirements regarding academic integrity.
  - Provide a statement on academic integrity in their course syllabi.
  - Make reasonable efforts to minimize student academic misconduct.
  - Manage the coursework submission process in full compliance with the University Anti Plagiarism Guidelines .
  - Act appropriately where any academic misconduct occurs.
- Exam proctors and/or invigilators must ensure that they and all exam candidates adhere to the instructions in the University Examination Policy.
- Administrative staff whose role relates to students (including Student Affairs, Registration, Admission, and Library staff) must, in the context of their interactions with students, inform students about this Policy and any other University regulations regarding academic integrity and remind students of the importance of academic integrity.

9. Where a student academic misconduct allegation is made that involves plagiarism, the academic staff member must follow all requirements of the clear process in the Anti Plagiarism Guidelines, which include assessment of the scale of the misconduct and the penalties that will be applied.
10. Where a student academic misconduct allegation is made of any form other than plagiarism, including as described in 7, the University has a clear process:
    - The academic staff member/proctor/invigilator/administrator who discovers (or receives the report of) the alleged misconduct must make an immediate and detailed record.
    - The academic staff member/proctor/invigilator/administrator must make a report to the relevant head of department.
    - The dean/head of department will review the submission and make a recommendation for action to the Vice President of Academic Affairs (VPAA).
    - Where appropriate, the VPAA will establish a panel to consider the case.
    - Following the panel's deliberations, the VPAA will make a decision on whether a penalty is to be applied and, if so, what the penalty will be.
    - The VPAA and the dean/head of department are responsible for ensuring that any penalty imposed is carried out in full.
11. Detailed reports of all alleged academic misconduct and penalties applied must be kept by the academic department. Copies must be sent to the VPAA, to Registration and to Student Affairs for their files.

---

[13] The Anti-Plagiarism Guidelines contain clear statements of College expectations, guidance on determining the scale of plagiarism (also described as major/minor cases) and relevant penalties

# Anti-Plagiarism Guidelines

1. The University ensures the promotion of academic integrity through a set of mechanisms including the Academic Integrity & Misconduct Policy, related policies, procedures, guidelines, and the use of plagiarism detection software.
2. In line with international good academic practice, the University considers plagiarism and unauthorized use of AI tools to be academic misconduct, which will be penalized and recorded in the student's file. The University adopts a zero-tolerance approach to plagiarized content or contents created by AI tools in any student submission, defined specifically as:
    - Submitted work which has a similarity level or level of content used by AI that exceeds acceptable thresholds (see 5.12 below), even where sources are cited and referenced.

- Submitted work which has any similarity that is the result of unreferenced use of sources and AI tools, no matter the proportion.

3. These Anti-Plagiarism Guidelines identify the types of academic work which must be submitted for textual similarity checking and checking of AI generated content and the responsibilities of faculty members and students to ensure that submitted work is compliant with these Guidelines and with the University Academic Integrity & Misconduct Policy.
4. The Anti-Plagiarism Guidelines are issued for the information and guidance of the following:
   - Students
   - Heads of department
   - Student Affairs
   - Coordinators
   - Registration Office

### Anti-Plagiarism Requirements

In line with its commitment to academic integrity and zero tolerance of plagiarism and unauthorized use of AI tools, the University requirements specified in these Anti-Plagiarism Guidelines promote and educate students in ethical academic activities during their program. Compliance is mandatory for students and for academic staff.

### Guidance on avoiding plagiarism

1. Academic staff (as stated in the Academic Integrity & Misconduct Policy) must:
   - Provide students with orientation and/or guidelines on how to avoid plagiarism and unauthorized use of AI tools . This must be done at the beginning of the course. Instructions must also be included in course specifications and in the course outline (as a week 1 activity in the week-by-week course progression schedule).
   - Provide students with clear information about the Academic Integrity & Misconduct Policy, these Anti-Plagiarism Guidelines and associated rules and penalties.
   - Give students the opportunity of "trial" use of Turnitin/SafeAssign during a formative assessment before use for summative assessment.
   - Give students in level one (year one) the opportunity to resubmit on one occasion only any submitted work not complying with these Anti Plagiarism Guidelines.
2. The relevant head of department, in coordination with academic staff members, must conduct at least one tutorial per semester about ethical behavior and plagiarism awareness and avoidance, in addition to the faculty responsibilities set out in 5.2 above.
3. To avoid plagiarism and unauthorized use of AI tools in student academic work, the following points should be borne in mind:
   - Continuous assessments may include quotes, small sources and bibliography, which must be properly referenced and are subject to the limits stated in 5.12 below. Major assessments such as thesis, graduation project and internship report may include bibliography and quotes, which must be properly referenced and are subject to the limits stated 5.12 below.
   - In order to ensure students present their own work for assessment and meet international norms of good academic practice, the quotes/sources mentioned must not exceed the threshold percentages stated in 5.12, even if properly referenced.
   - No part of assessment should be generated using AI tools unless the Instructor clearly mentioned the use of AI tools to generate specific tasks in the assessments.

### Submission of work

1. Student work that is subject to anti-plagiarism verification includes (but is not limited to) the following:
   - Graduation projects.
   - Case studies and presentations.
   - Assignments.
   - Reaction papers.
   - Reports, including internship reports.

2. All student academic work with a grade weight of at least %20 towards the overall course mark will be checked for plagiarism and unauthorized use of AI tools.
3. Where no course assignment is weighted %20 or above, at least one continuous assessment for each course must be checked for plagiarism and unauthorized use of AI tools. This applies at all levels of all programs and must be clearly indicated in the course syllabus.
4. For theses, graduation projects, internship reports and other major assessments with a weight of more %20 in the course grade computation:
   - The supervisor assigned to support and guide the student during the preparation of the work will advise the student on avoidance of plagiarism and unauthorized use of AI tools, the importance of originality and any revisions needed to ensure that the work is compliant with the similarity threshold.
   - The student may use Turnitin/SafeAssign more than once to check their work prior to submitting it in order to ensure that the final work is compliant with the University regulations.
   - The student is expected to follow the supervisor's guidance, however the student has sole responsibility for deciding on the final version of the work that they will submit.
5. Students are responsible for uploading academic work for textual similarity and unauthorized use of AI tools review through Turnitin/SafeAssign and for submitting the academic work with the originality report to the academic staff member teaching the course by the specified deadline.

**Similarity, unauthorized use of AI tools & similarity checking**

1. The academic staff member teaching the course is responsible for checking for plagiarism in work submitted by students and must maintain reports in the course files. Automatic similarity and unauthorized use of AI tools checking software (Turnitin, SafeAssign, etc.) will be used initially (if suitable to the format of the assessment), followed in all cases by a manual examination to determine whether plagiarism is present.
2. For assignments of a nature where similarity and unauthorized use of AI tools cannot be detected (or not fully or appropriately detected) by Turnitin/SafeAssign tools (such as an assignment requiring programming code), the teacher of the course is responsible for checking for plagiarism manually (per 5.10) and if any additional similarity checking method is used, it must be documented in the course folder.
3. The University has set a similarity threshold which is intended to ensure that students present their own work for assessment. The use of references and citations of other work is appropriate and necessary, however such work (even where properly referenced) should not form a major part of the submitted work. The thresholds for similarity and unauthorized use of AI tools for student academic work are shown below:

| Item | Similarity Threshold |
|---|---|
| Continuous Assessment (coursework, assignments, mini projects, case studies, presentations, etc) | %20 |
| Major Assessments such as thesis, graduation project, internship report, final project or course work used as replacement of final exams | %15 |

4. The academic staff member teaching the course will review the student work and originality report to determine whether the work:
   - Complies with maximum similarity thresholds for academic work categories.
   - Contains plagiarism (i.e. use of unreferenced sources/work).

### Plagiarism & penalties

1. Sources (similar text) that are properly referenced:
    - If the similarity level is equal to or less than the acceptable percentage of similarity shown in 5.12, the mark will be recorded as assigned.
    - If the similarity level is over the acceptable percentage of similarity shown in 5.12 by %5 or more (i.e. %25 or more for continuous assessment or %20 or more for major assessments), the work will be rejected with no possibility of revision or second submission and the grade assigned and recorded for the item will be zero (0).
    - If the similarity level is more than the acceptable percentage of similarity shown in 5.12 by less than %5 (i.e. in the range %25-%21 for course work and %20-%16 for major assessments), the assigned grade will be reduced by %25.
    - For repeat offences (over the threshold by any amount), the assigned grade for the item will be recorded as zero (0).
2. Sources (similar text) that are not properly referenced:
    - If the manual check confirms that work, sources, or similar text are present and are not properly referenced, this will be considered as plagiarism, deemed to be an academic offense and will be recorded in the student's file. In addition, a penalty will apply as follows:

| Offense | Penalty |
|---|---|
| Plagiarized work equal to or less than acceptable percentages shown in 5.12 | Zero (0) mark for the item |
| Plagiarized work exceeding by any amount the percentages in 5.12 | The course grade will be reduced by one letter grade |
| Repeat offense(s) of plagiarized (unreferenced) work of any amount in the same course | F grade in the course |
| Repeat offense(s) of plagiarized (unreferenced) work of any amount in a subsequent semester | F grade in all courses registered in the semester |

3. Assignments where Turnitin/SafeAssign is not suitable for similarity and unauthorized use of AI tools checking (e.g. assignments requiring programming code etc) have the same acceptable similarity threshold levels stated in 5.12 and violations of these threshold will be penalized following the approach set out in 5.14 and 5.15 above.
4. Repeat offenses of excess similarity and all cases of plagiarism will also be referred to the Disciplinary Committee, which may apply additional sanctions if considered appropriate.

# Student Discipline

1. The University is an academic community committed to the educational and personal growth of its students, and to its core functions of teaching & learning, research, and community engagement, towards the UAE Vision of a knowledge-based economy. In furtherance of this commitment, the University promotes academic and personal integrity and international best practices in a student-centred learning environment. This Policy sets out how the University will manage any instances where University students breach its Code of Conduct, by academic misconduct or other disciplinary offence.
2. Through its policies and Code of Conduct, the University sets out expectations for student conduct, requiring them to demonstrate respect for the University, staff, fellow students, and property. The Code includes examples of unacceptable conduct, although the list is not exhaustive, and the University will, through the processes in this Policy, determine if an instance

of unacceptable conduct has occurred. The Code is available online and included in the Student Handbook, which is distributed to all students at induction. Students are required to sign a pledge at the time of admission, undertaking to abide by the Code and other University rules. This Policy is invoked where it is alleged that a student is failing to meet these expectations.

3. Under this Policy, while breaches of the Code of Conduct may be generically described as misconduct or misbehavior, the University uses two specific terms for student behavior that breaches the Code:
   - Academic misconduct is used to refer to breaches of the Academic Integrity Policy and of academic-related regulations and policies, including relevant parts of the Code of Conduct.
   - Disciplinary offence is used to refer to breaches of the Code of Conduct and of regulations and policies that do not relate to academic matters.
4. The University is committed to a fair and equitable disciplinary process, which is managed under this Policy, always carried out professionally, and results in a prompt and efficient resolution of issues. It allows for reasonable time for preparation, investigation, and assessment of the circumstances of each case while avoiding unnecessary delays.
5. The student is presumed innocent of an allegation of academic misconduct and/or disciplinary offence until proven otherwise by the evidence provided in the case. The burden of proof rests with the University; in other words, the University is responsible for providing evidence that substantiates an allegation of breaching the LC Student Code of Conduct.
6. Allegations of student misconduct/misbehavior are, wherever possible, dealt with informally. Informal counselling may form part of the process and, if used at an early stage, may help prevent the issue from escalating into a formal disciplinary matter. This Policy and the formal disciplinary process are to be invoked if informal action is not appropriate or has been unsuccessful.
7. Under this Policy, all conduct in breach of University policies and regulations (academic or other) is considered to be unacceptable conduct and is subject to disciplinary action.
8. The Deanship of Student Affairs is responsible for explaining to students matters relating to the Code of Conduct and to this Policy.

### Academic misconduct

1. Types of academic misconduct and associated penalties are set out in the Academic Integrity Policy.
2. The University procedure set out in this Policy will apply in all cases of academic misconduct. Action and penalties will differ according to the type of offence and whether it is a first or repeat occurrence. Full details are provided in matrix format in Appendix 1.
3. The University has a computerized system named Disciplinary-Track to report and record cases of student academic misconduct, which is monitored by Student Affairs.

### Disciplinary offences

1. All types of unacceptable student conduct relating to non-academic matters are described as disciplinary offences.
   Examples of **Major** include offences include (but are not limited to):
   2. Acts against religion and/or morality (e.g., blasphemy, insulting the divine entity (God), the religion, the Quran, or the prophets).
   3. Acts that defame the University or its staff or bring the University into disrepute.
   4. Breaches of any University policy.
   5. Acts of harassment, including Personal Safety & Security, Sexual Harassment, and Fair Treatment.
   6. Consumption of alcohol or banned substances.
   7. Any digital, verbal, or physical attack/insult on University staff/faculty and behavior towards them in an impolite manner.
   8. Any digital, verbal, or physical attack/insult on students and classmates within University premises and official platforms
   9. Stealing property from the University, faculty, staff, or students.

10. Damaging or misusing University property, resources, gaming & sports tools including computers, or property belonging to others (e.g., students, faculty, staff members, and visitors).

---

[14] All conduct in breach of University policies and regulations is considered to be unacceptable, even where it may be categorized as minor or major under the specific relevant policy.

11. Claiming degrees that were not earned, presenting falsified transcripts or falsified information
12. Using fake ID cards
13. Accessing, using, exchanging, or downloading offensive or illegal material.
14. Conviction of a crime.
15. Acts that cause injury to self/another or compromise safety on University premises.
16. Disruption to or improper interference with University activities.
17. Unacceptable student actions or behaviors during internships, trips, or other activities involving external parties that negatively impact the image of the University.
18. Failure to comply with a previously imposed penalty under this code.

Examples of **Minor offences** include (but are not limited to):

1. Unauthorized use of Students of Determination tools or amenities that impacts the special needs students.
2. Taking photos of students/staff without prior written University approval
3. Smoking anywhere in the University building.
4. Eating/drinking in teaching and practical rooms (labs).
5. Writing on walls, doors, or desks or hang posters without prior University permission.
6. Use University computers for commercial or entertainment purposes.
7. Gather at campus entrances and/or near reception, as this may block access.

1. The University procedures set out in this Policy will apply in all cases of student disciplinary offense. Action and penalties will differ according to the type of offense, whether it is a first or repeat occurrence, and whether it occurred inside or outside the classroom. Full details are provided in matrix format in Appendix 2.

## Disciplinary process

1. Any student who is reported to have committed a minor disciplinary offence will be dealt with as follows:
   - Called by the counseling office for investigation and hearing
   - Offered behavior modification through proper guidance
   - Verbally warned to not repeat this act again
   - Requested to sign a disciplinary pledge

The incident and actions will be recorded in the Disciplinary-Track system.
If the student doesn't adhere to the guidance provided or repeats the act, their case will be escalated to the student discipline panel.

2. Any student who is the subject of an allegation of major disciplinary offence will be dealt with as follows:
   - Called by the counseling office for investigation and hearing
   - Settle the issue if possible and make the student sign a disciplinary pledge avoiding escalation to the student discipline panel
   - Record the incident and actions in the Disciplinary-Track system
   - If the case is not solved within the Deanship of Student Affairs, notification is sent to student by email from the Deanship of Student Affairs at least 1 working day before the student discipline panel meeting, including a clear statement of the allegation and their right to representation.
   - Make representation at the formal hearing, orally and in writing.
   - Be accompanied and represented by another person from LC ( student, staff, or faculty)

at any formal hearing and/or procedural stage (optional).

3. It should be noted that, where necessary for the safety/welfare of other students/staff, the University may impose temporary exclusion or suspension before the formal hearing while the allegation is being investigated. The University will ensure that:
   - Formal written notification of temporary expulsion/suspension, with full details of the allegation and reasons why University attendance is not appropriate.
   - Investigations are conducted as quickly as possible, so that the hearing can be held promptly.
   - Wherever possible, subject to the safety and welfare of other students and staff, arrangements are made to minimize disruption to the excluded or suspended student›s program of study (e.g. arrangements may be made to allow completion of outstanding academic work and attendance at exams).

### Disciplinary hearings

1. The formal hearing for non-academic offences will be conducted by the Student Discipline Panel, an ad hoc panel set by VPAA which usually comprises:
   - Dean of Student Affairs (Chair).
   - Student academic advisor.
   - A member of staff with knowledge of the circumstances of the allegation.
   - A member of University academic staff unconnected with the student's program.
   - Representative from the student council (council president or nominee)
   - A note taker.
2. The Panel will proceed as follows:
   - The student will be invited to attend the hearing and given at least 1 day notice, and has the right to be accompanied by a friend/representative . If the student chooses not to attend, the hearing may continue in his/her absence, at the Chair's discretion.
   - Witnesses may be called by the student or the panel and can be questioned by all parties.
   - After the panel has heard from the student and any witnesses, the panel will discuss the case to reach a recommendation.

### Outcomes from the disciplinary process

1. 1. Actions arising from the disciplinary process include one or more of the following depending on the case:
   - No case to answer / Case unproven
     - Where there is no evidence to substantiate the allegation, the Panel will decide that the case remains unproven, the suspension/expulsion will be lifted, and no note will be made in the student file.
   - Written Warning:
     - In instances other than minor breaches of the University's code of conduct, the issuing of a written warning may be appropriate.
     - The non-academic written warning is kept in the student's file throughout the student's study period.
     - If the decision of the Panel at a hearing is to issue a written warning, the student will be informed of the decision.
     - The Deanship of Student Affairs will send written notice to the student within three working days of the end of the hearing deliberations.
   - Final Written Warning:
     - In instances where a serious breach of University rules has been proven, it may be appropriate for a final written warning to be issued. This may be with or without prior oral or written warnings.
     - Unless the Panel decides otherwise, a final written warning will be kept in the student's file throughout his/her study period.

---

[15] Exclusion means withdrawal of student's right of access to specified University premises and/or activities; suspension means total exclusion from University premises and activities. Both may include a requirement that the student has no contact of any kind with a named person or persons.

[16] The student must make his/her own representation arrangements.

- If the Panel decides that a final written warning is appropriate, the student will be informed of the decision
- A written notice will be sent to the student by the Deanship of Student Affairs within three working days of the end of the hearing deliberations.
- Further breach(es) during the effective period may lead to expulsion (following an appropriately convened Panel hearing).

- Other penalties may be imposed in addition to or instead of, a formal warning, which may include that the student must:
  - Give a written undertaking of subsequent good conduct at the University.
  - Give a written/verbal apology to the individual(s) or group(s) affected.
  - Pay for damage to property or recompense the University for loss/costs incurred directly or indirectly from the student›s misconduct.
  - Be fined up to a maximum of AED 1000.
  - Have all or specific privileges withdrawn, e.g. exclusion from classrooms/lectures, a University service, activity, council or club, or similar as considered appropriate.
  - Suspension ranging from one week to one or more semesters
- Expulsion for Gross Misconduct:
  - The University has the right to expel any student for committing a single (or several) act(s) of gross misconduct.
  - A decision to expel may be the outcome of an unsatisfactory disciplinary record over a period of time, in which no single incident warrants immediate expulsion. In such cases, the formal warning procedure, outlined above, is followed.
  - As per 4.19, a further disciplinary offense during the effective period of a final written warning will also result in immediate expulsion.

### Formal notice of disciplinary hearing outcome

1. The Dean of Student Affairs is responsible for issuing formal written notice of the outcome of all Student Discipline Panel hearings within three working days of the end of the panel deliberations. Where relevant, the notice must also include details of the penalty imposed, and of the student's right to appeal . If the penalty involves suspension for any period or dismissal from the University, the notification must be issued by the VPAA office. A copy of all notifications (with or without penalty) must be kept in the student's file.

### Appeals

- Students may appeal against disciplinary action by notifying the Deanship of Student Affairs in writing within three working days of receiving the outcome notification. Thereafter:
- Student Affairs will acknowledge receipt and confirm the appeal is in progress.
- On receipt of the case from Student Affairs, the Vice President of Academic Affairs (VPAA) will form an ad hoc Appeal Panel.
- Appeal Panel will be composed of persons appropriate to the case who were not involved in the decision which is the subject of the appeal as follows:
  - chaired by a Dean
  - Student Affairs staff
  - One manager
  - One member of administrative staff
  - One department head
  - One student representative
- The Panel decision must be sent to the VPAA for endorsement within 5 working days. Once endorsed, the Panel decision is final and must be notified in writing to the student within a further 5 working days.

[17] Student appeals against academic grades are covered by the Grade Appeals Policy.

### Monitoring

- Student Affairs will monitor all student disciplinary offense cases recorded on Disciplinary-Track system and will analyze them on an annual basis.
- The analysis report will be presented to Academic Council by the Dean of Student Affairs, which will conduct a comprehensive review of cases, policies, and procedures in light of historical data.

## Appendix -1 Academic Misconduct Matrix

The Matrix below sets out academic misconduct offenses which are breaches of the Academic Integrity Policy, with the action and penalty that will be applied in all cases.
Cases are recorded on the University Disciplinary-Track computerized system, to ensure effective reporting and tracking.
In all cases, students have the right to appeal against a penalty, in line with the Disciplinary Policy (Disciplinary process section 2 onwards).

| Academic Misconduct Matrix | | | |
|---|---|---|---|
| Offense | Instance | Category | Action / Penalty |
| Cheating in first/second/mid-term exam<br>Attempts (successful or unsuccessful) to communicate with another student | First offense | Minor | • Verbal warning |
| | Second offense in same test | Minor | • Expulsion from classroom<br>• 0 grade assigned for test<br>• Record made on Track system by instructor |
| Cheating in first/second/mid-term exam<br>Copying answers; obtaining exam in advance; bringing in notes (any format) or prohibited items including books if closed book exam, or phones | First offense | Major | • Expulsion from classroom<br>• Report to dean<br>• 0 grade assigned for test<br>• Record made on Track system by instructor |
| | Second offense: 0 grades for cheating in two/ more course assessments | Major | • F grade assigned to course<br>• Report to dean<br>• Record made on Track system by instructor |
| Cheating in first/second/mid-term exam<br>Personation:<br>either engaging another person to take a test in one's place<br>or taking a test on another person's behalf | First offense | Major | • F grade assigned to course<br>• Report to dean<br>• Record made on Track system by instructor<br>• Student dismissed from University |
| | | | |
| **Cheating in final exam**<br>Attempts (successful or unsuccessful) to communicate with another student | First offense | Minor | • Verbal warning |
| | **Second offense** in same exam | Major | • Expulsion from exam room<br>• Report to Exams Committee & dean<br>• F grade assigned to exam course<br>• Record made on Track system by instructor<br>• Student warning letter issued |

| | | | |
|---|---|---|---|
| | Third offense: F grades for cheating in two/ more courses within the same academic year | Major | • Report to dean<br>• Student suspended for one semester |
| Cheating in final exam<br>Copying answers; obtaining exam in advance; bringing in notes (any format) or prohibited items including books if closed book exam, or phones | First offense | Major | • Expulsion from exam room<br>• Report to Exams Committee & dean<br>• F grade assigned to exam course<br>• Record made on Track system<br>• Student warning letter issued |
| | Second offense: F grades for cheating in two/ more courses within the same academic year | Major | • Report to dean<br>• Record made on Track system<br>• Student final warning letter issued<br>• If previous warning issued, student is suspended for one semester |
| | Third offense: Second occurrence of two F grades for cheating within the same academic year | Major | • Report to dean<br>• Student dismissed from University |
| Cheating in final exam<br>Personation:<br>either engaging another person to take an exam in one's place<br>or taking an exam on another person's behalf | First offense | Major | • Report to Exams Committee & dean<br>• Record made on Track system<br>• Student dismissed from University |
| Plagiarism | Academic staff members must follow all requirements of the clear process in the Anti Plagiarism Guidelines, including assessment of the scale of the misconduct and the penalties to be applied | | |
| Fabrication of data | First offense | Major | • Report to dean<br>• 0 grade assigned to project/ assignment/work<br>• Record made on Track system<br>• Student warning letter issued |
| Collusion | First offense | Major | • • Verbal warning to all students involved<br>• • 0 grade assigned to project/ assignment/work<br>• • Record made on Track system<br>• • Student warning letter issued |
| Free-riding | First offense | Major | • • 0 grade assigned to project/ assignment/work<br>• • Record made on Track system<br>• • Student warning letter issued |

| | | | |
|---|---|---|---|
| Academic sabotage | First offense | Minor | • • Student will be banned from attending one or more lectures and his absence will be counted.<br>• • Record made on Track system |
| | Second offense | Major | • • If the action was repeated the student will be suspended for a semester.<br>• • Record made on Track system |
| Misuse of intellectual property | First offense | Major | • • 0 grade assigned to project/ assignment/work<br>• • Record made on Track system<br>• • Student warning letter issued |
| | Second offense | Major | • • F grade assigned to relevant course/s<br>• • Suspension for one semester or more |

# Appendix 2

## Disciplinary Offense Matrix

The Matrix below sets out disciplinary offenses and the action and penalty that will be applied in all cases.

In all cases, students have the right to appeal against a penalty, in line with Disciplinary Policy (section Appeal (1) onwards).

| Disciplinary Offense Matrix | | | |
|---|---|---|---|
| Offense | Instance | Category | Action / Penalty |
| Disciplinary offences inside or outside classrooms Offences of social/behavioral nature cited in Student Discipline Policy (section Disciplinary offences(1) | First Offence | Minor | • Called by the counseling office for investigation and hearing<br>• Behavior modification through proper guidance<br>• Verbally warn the student to not repeat this act again<br>• Sign a disciplinary pledge<br>• Record the incident and actions in the Disciplinary–Track system |
| | Repeated Offence | Minor | • If the student doesn't adhere to the guidance provided or repeated the act, their case will be escalated to the student discipline panel |
| | First Level | Major | • Called by the counseling office for investigation and hearing<br>• Settle the issue if possible and make the student sign a disciplinary pledge avoiding escalation to the student discipline panel<br>• Record the incident and actions in the Disciplinary –Track system |
| | | | • If the case is not solved within the Deanship of Student Affairs, notification is sent to student by email from the Deanship of Student Affairs at least before 1 working day of the student discipline panel meeting, including a clear statement of the allegation and their right to representation.<br>• Make representation at the formal hearing, orally and in writing.<br>• Be accompanied and represented by a person of their choice at any formal hearing and/or procedural stage (optional).<br>• Actions will be decided based on the case and relevant disciplinary action will be implemented in reference to policy "section Outcomes from the disciplinary process" (1)<br>• The non-academic written warning is effective for study period unless otherwise stated at the time of issue.<br>• Academic written warning is effective for one academic year unless otherwise stated at the time of issue |

# Grade Appeals

1. The University is an academic community committed to the educational and personal growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the UAE Vision of a knowledge-based economy. The University promotes ethical behavior and international best practice. This Policy sets the University commitment to providing a transparent mechanism for students to raise a concern or appeal against the results of the final course grade.
2. Under this Policy, valid grounds of appeal are 'procedural' (e.g. marks were not added up correctly; an assessment component was omitted from the final grade; etc.). The student may not appeal against the academic judgment of the examiner/assessor.
3. The University recognizes the benefits of resolving these matters before an official appeal is made, through discussion that takes place as soon as possible after the grade is released. Every effort will be made to resolve the matter at this stage. At this stage, the student must meet with the following individuals, in the order listed, to discuss the matter:
    - Faculty member teaching the course.
    - Head of the department in which the course is offered.
    - Dean of the Faculty in which the course is offered.
4. If the matter is not resolved at this stage, the student should fill out a formal appeal through the University services portal and pay the relevant fees. This request must be made before the deadline stated in the academic calendar.
5. On receipt of the appeal and fee, the appeal will be forwarded to the dean of the faculty teaching the course who will assign a faculty from the same specialization (but not anyone involved in the evaluation of the student who has appealed) to consider the appeal. The result of the consideration will be one of the following recommendations:
    - The original grade to be upheld.
    - The grade to be lowered relative to the original.
    - The grade to be raised relative to the original.
6. The recommendation is submitted to the recommendation for final approval.
7. Following consideration and approval by the dean, a change grade form must be filled out and sent to Student Affairs and to Registration for execution.
8. The result of the appeal will be communicated to the student through the service portal by Student Affairs. Registration will update the grade on the SIS.

# Student Grievance

1. The University aims to foster the values of respect, integrity, fairness and transparency among all students and staff and to maintain a friendly and positive atmosphere where students can study and develop academically and personally . There are occasions, however, when conflicts arise which require resolution and this Policy provides a framework for students to submit a formal grievance; to have it evaluated sensitively, confidentially, promptly and objectively; and to have it resolved through a clear and unbiased process.
2. Confidentiality will be upheld by all parties to the highest degree possible at all stages of the grievance. This means that no issue regarding the grievance will be discussed with any person who is not directly involved in the investigation.

---

[18] The Student Rights & Responsibilities Policy contains a full list of student rights.

3. Anonymous complaints will not be acted upon, however students who wish to make useful general suggestions on University services (eg program content, teaching methods, learning resources or other issues) may submit them () via e-mail to Student Affairs , the student visit form or through the Student Council.
4. This Policy defines a grievance as a student request for formal investigation of any decision(s)/ action(s) by a member of University staff they perceive to be wrong, mistaken, unjust, discriminatory and/or in violation of their rights. A student may not submit a case under this Policy if the alleged grievance is:
    - Against another student(s) .
    - Against grades or decisions regarding academic work (note: where any harassment and/ or discrimination is involved, this Policy does apply).
    - Against a University policy/procedure or a University employee acting in compliance with a policy/procedure.
    - Based on the same/similar circumstances involving the same student, which are pending resolution, under adjudication, or resolved.
5. The University considers that conflicts between students and staff are best resolved informally and in good faith between the individuals concerned. It therefore encourages informal meetings between student and staff, with or without involvement of third parties (eg Student Council, Student Affairs, course coordinator, head of department, dean) to assist with communication and mediation.
6. In cases where the informal meetings prove unsuccessful or unsatisfactory, the student has the right to file a formal grievance in accordance with the provisions of this Policy. In such cases, the student must submit a written grievance to Student Affairs no later than 5 working days after the occurrence of the grievance. No appeal will be accepted after that, with the following information:
    - The date the incident took place, location and person(s) involved.
    - A clear and concise statement of the grievance, describing what occurred and the Policy/ right that is alleged to have been violated.
    - Any action taken with the source(s) of the grievance, any remedy sought and any outcome agreed upon/discussions left/decision left to be taken .
7. Grievance Resolution: Student Affairs will consider the grievance submitted to determine whether it is minor or major and progress it appropriately, as follows:
    - Minor Grievances: These will be addressed by a person-to-person discussion between the student, the staff member concerned, Student Affairs staff and the student›s advisor. The student's advisor and Student Affairs will keep records of the case and its outcome.
    - Major Grievances: Where Student Affairs considers the case significant or where the student is dissatisfied with the outcome of the Minor Grievance process, the case will be forwarded by Student Affairs to the VPAA . The VPAA and the Dean of Student Affairs will discuss the case and if the VPAA can reach a solution that satisfies the student, the grievance case will be closed.
8. Where a major grievance case is not closed, the Vice President of Academic Affairs (VPAA) will establish an ad hoc Grievance Panel to investigate and recommend action. Panel members will be appointed by the VPAA according to the case area in the following categories:
    - The VPAA or designee, as Chair.
    - The Dean of a College not involved in the case.
    - Head of a relevant administrative department not involved in the case.
    - Student Council member or designated student.
    - The Manager of Student Affairs or designee.

---

[19] These are managed in line with the Code of Conduct.

[20] The Grade Appeals Policy, the Academic Integrity Policy and the Student Disciplinary Policy apply.

[21] For example, the issue may have been discussed with relevant academic staff with no resolution.

9. The Dean of Student Affairs is responsible for the implementation of this Policy. Student Grievance Forms are held at Student Affairs and will be made available to students on request.
10. The Grievance Panel will conduct its business as follows:
    - Student Affairs will collect all information related to the grievance, call the Panel meeting and maintain records of the grievance, the process and the outcome.
    - If a Panel member declares a conflict of interest (or one is discovered) before or during proceedings, they will be excused by the Chair who will appoint a replacement. If there is disagreement as to whether the member should be replaced, the matter will be determined by a majority vote.
    - Panel members may not serve on any appeals committee subsequently appointed by the President to hear the case.
    - The Panel has the right to postpone decisions and hold further meetings if further information is needed.
    - The final decision will be made in all cases on the basis of a formal vote at a Panel meeting. It will be notified to the student and the relevant department dean within five (5) working days of the Panel meeting.
11. The student has the right to appeal against the Panel decision by submitting an appeal to the Manager of Student Affairs, in writing and within five (5) days from receiving the Panel decision. Any appeal will be submitted to the President.
12. The President will make a final decision within five (5) working days of receiving the appeal, after reviewing the Panel report, the evidence, and the process used support the decision. The President may:
    - Uphold the Panel decision(s).
    - Reverse the Panel decision(s).
    - Refer the case back to the Panel for reconsideration de novo.
    - Uphold the Panel decision, with any modification deemed reasonable.
13. The President's decision will be notified within five (5) working days to the student and the dean by the Manager of Student Affairs and kept on file in the student record.

# Independent Study

1. The University recognizes that there may be instances in which it is appropriate to permit a student to earn course credit through learning conducted outside the usual classroom environment. Use of this study mode is termed independent study (IS) and is "a learning mode in which a student is individually supervised by a faculty member in order undertake a learning opportunity which is otherwise unavailable".
2. Use of independent study mode is an exception to the norm, permitted by the University only for undergraduate studies and only in two cases:
    - As a mechanism to avoid delaying graduation and in such cases, the course is a regular course which the student is allowed to take in an independent study mode during any of the last two (2) semesters preceding their graduation.
    - As an opportunity for students to study topics of inquiry based on student interest and faculty expertise. In such cases (and even where it satisfies one or more program learning outcomes) an independent study mode course may not replace an offered/required course and may be taken only as an elective course, counted toward elective credit in the program.
3. A student registered in a University undergraduate program is entitled to register in an independent study mode course only once during their study, except with prior approval from the VPAA. In addition, the following provisions apply:
    - If a student transfers from one University program to another and was registered for an independent study mode course in the previous program, s/he may not register for an independent study course in the new program.

- If a student has graduated from a University program and was registered for an independent study course in that program, s/he may register for an independent study course provided that previous Independent Study course was not part of the transferred credit to the new program.
- The maximum number of courses taken in independent study mode must not exceed one course (3 credit hours).In exceptional cases, VPAA can allow one additional independent study course.

4. Undergraduate student requirements to take an independent study mode course are as follows:
   - They must have a cumulative GPA of 3.0 out of 4.0 or above.
   - They must have completed a minimum of 90 credit hours in their program.
   - They must have demonstrated initiative, discipline, independence, and persistence, indicating potential to successfully complete an IS course.
   - They may not repeat a failed course in independent study mode.
   - They may not register for independent study mode to make up deficiencies resulting from failures in other courses.
5. The University requires that all independent study mode courses:
   - Must have a learning plan (syllabus), learning outcomes, end of term evaluations and appropriate assessment.
   - Where taken outside the curriculum (see 1), require initial approval by a faculty member willing to mentor the student, in addition to the approval of the department head and the dean.
   - An IS course can have a maximum of 3 students registered in it, and all these students should meet the criteria of registration in independent study.
   - Are indicated on the student transcript using the acronym IS.
   - Are considered as one (1) credit load for the academic staff concerned.
6. Academic department heads and deans are required to consider all proposals to take a course in independent study mode and must ensure that:
   - Approval of a proposal to take a course by independent study is only given (and subsequently delivered) in compliance with this Policy.
   - Academic staff are not assigned more than one (1) IS course as part of their load per semester.
   - An IS course is only assigned to an academic staff member who has taught the course in regular mode in the last 2 semesters.
   - Records of IS courses delivered by the department/University are maintained.
7. Academic staff involved in the delivery of IS courses must do so with the same level of quality and commitment as in regular delivery mode. This includes:
   - Preparing adequate materials with diversified media and approaches that support the independent learning approach and content (use of flipped class approach, pre-recorded video, etc, is encouraged).
   - Allocating specific office hours' time slots for the IS course/student(s).
   - Maintaining a Course Folder according to University Policy.
8. Students whose application to take an Independent Study course is approved must acknowledge and commit to their responsibility to:
   - Fully explore the IS course content; attend the agreed face-to-face hours with the assigned academic staff member; and actively engage during the specified office hours.
   - Meet deadlines, keep appointments, complete assignments/projects/exams, work independently, as agreed in the proposal (without any need for follow-up or prompting from the assigned academic staff).
   - Recognize that substantial abbreviation of their commitment and/or superficial study is unacceptable and will be cause for appropriate sanctions.
9. In respect of Independent Study courses, the Registration Department will:
   - Ensure no student registers on more than one Independent Study course.

- Arrange appropriate scheduling of IS sections.
- Ensure the student transcript properly indicates the mode as IS.

# Academic Standing

1. Academic standing is the key mechanism by which a student's progress in their program is monitored at the conclusion of each semester. It affects matters such as continuation in a program, promotion, graduation, and the requirement for a student to withdraw. The purpose of specifying a student's academic standing is to alert them, their department head and academic advisor as early as possible to any problem that may negatively impact their progress.
   - This Policy sets out the University methodology for determining the student's academic standing and the remedial action and measures which may be taken, including the maximum study/course load permitted for students during the time they are on academic probation.
   - The University requires that undergraduate students must maintain a 2.00 CGPA or higher and graduate students must maintain a 3.00 CGPA or higher to be considered in good academic standing.
   - If the student's CGPA drops below 2.00 for undergraduate programs and below 3.00 for graduate programs after completing at least 30 credit hours in case of undergraduate and at least 15 credits for graduate programs , he/she will be placed on academic probation in the following semesters until the student's CGPA improves to that required for good academic standing. While the student remains on probation, s/he will be limited to 12 course credit hours per semester for undergraduate programs and 6 credits for graduate programs.  Any student who is under academic probation is allowed to change major only once.
   - If the student's CGPA remains below the requirements of good academic standing for three consecutive semesters, the student will be dismissed from the University and may apply for readmission to as specified in the Readmission Policy.

# Course Coordination

1. he University is an academic community committed to the creation, dissemination and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth, towards the UAE Vision of a knowledge economy. As part of this commitment, this Policy sets out how the University will ensure that appropriate high academic quality and standards are maintained when courses are delivered across campuses and/or in multi-section arrangements.
2. The University considers it critically important to the student learning experience that, when a course is taught on more than one campus and/or with multiple sections delivered by different instructors, a common syllabus (usually with common textbook[s]) is used, to ensure that all students registering for a course receive the same content, the same assessment, and have the same opportunity to achieve course learning outcomes and competencies.
3. Coordination across campuses and/or sections of a course is essential to ensure that there is consistency in the University learning environment, eliminate course drift and offer all students the same course experience. department heads must therefore assign a course leader title to each such course, whose main duties are to lead the coordination activities and maintain the course folder.
4. Under this Policy, the course leader and relevant academic staff must work together to:
   - Review course learning outcomes and content, and develop a common set of topics and learning materials.
   - Review course content, learning outcomes, and assessment tools, and develop a common

set of major assessment materials (see 5 below).
- Transfer the syllabus to a detailed semester weekly plan/outline for departmental approval.
- Upload the approved semester weekly plan to Blackboard LMS for students before the start of the semester.
- After delivery of the course, review content, learning outcomes, assessment tools and outcomes, and develop a common set of improvement measures.

5. All home/class assignments, projects, final exams, and assessment components weighing %20 or more of the total course mark must be identical for all sections and at all campuses. Quizzes and/or midterm contributing less than %20 may be prepared separately by the member of academic staff teaching the section (in line with the agreed approach).
6. Two course coordination meetings involving the whole course team[23] must be held each regular semester, the first before midterms and the second to prepare the final exams. Minutes of meetings must be kept, and maintained on course folders, in department files.
7. Academic staff teaching courses offered across sections and/or campuses must:
   - Participate in all course coordination activities (3) and meetings (6).
   - Comply with the agreed coordination plan.
   - Inform the department head promptly if there is a need to change the planned class implementation or schedule.
   - Reflect on and collaborate in teaching and assessment practices.
   - Work actively to ensure grade comparability across sections.
8. Department heads, and course leaders must:
   - Monitor closely the student experience across campuses/sections to ensure that coordination measures are effective.
   - Report to the dean on any variations between component and overall marks for courses offered across campuses/sections.
   - Generate cohort analysis reports at the end of each semester and academic year which include student achievement data for campuses/sections
9. This Policy applies to specific arrangements for coordination of courses offered across several sections and/or campuses. All University policies and procedures related to academic quality, course delivery, academic conduct, and academic operations (e.g. internal/external moderation, blind second-marking, course folder audits, credit hours, class visits, course add/drop, academic misconduct, etc.) must be applied to all such courses.

---

[23]Course coordination meetings may be organized by the course leader for the course or by the department head for all courses at the same time, at the discretion of the department head.

# Course Coordination

1. The University is an academic community dedicated to the creation, dissemination, and application of knowledge, in a student-centered learning environment that promotes intellectual and personal growth. This Policy provides a framework for managing the class scheduling process, to ensure study plans are catered for, conflicts are avoided, unavoidable postponements or cancellations are managed appropriately, and University facilities are used in an optimal manner.
2. The number of weeks for each semester and the start/end dates are published in the Academic Calendar at the start of the academic year. All departments must schedule their course offering appropriately and send the draft to the Registration Officer by the deadline. The Registration Officer prepares the combined University class schedule for each semester with room allocations and obtains approval from the VPAA
3. Day abbreviations used for class scheduling are as follows:

| | |
|---|---|
| Sunday | U |
| Monday | M |
| Tuesday | T |
| Wednesday | W |
| Thursday | R |
| Friday | F |
| Saturday | S |

4. Approved scheduling patterns: Regular semesters (15 weeks):
    - 3 credit hour courses may be scheduled twice a week (TR or MW) for 90 minutes each or on a single day back to back session on Saturday or Sunday for 3 hours and 15 minutes with a break of 15 minutes in between.
    - 2 credit hour courses may be scheduled twice a week (TR or MW) for 60 minutes each.
5. Approved scheduling patterns: Intensive semesters (6 weeks):
    - Courses with 3 credit hours to be scheduled twice a week (TR or MW) for 3 hours and 30 minutes with a break of 20 minutes.
    - Courses with 2 credit hours to be scheduled twice a week (TR or MW) for 2 hours and 30 minutes with a break of 20 minutes.
6. Approved variations to scheduling:
    - Labs and studio courses may have start times in line with the requirements of the program.
    - 3 credit hour courses may be scheduled twice a week (TR or MW) for 90 minutes each or on a single day back to back session on Thursday for 3 hours and 15 minutes with a break of 15 minutes in between.
    - 2 credit hour courses may be scheduled twice a week (TR or MW) for 60 minutes each.
    - Departments which schedule courses back-to-back on any day other than Thursday must ensure they schedule another course also back-to-back with the same timing on subsequent pattern day, i.e. if a course is scheduled on U back-to-back, another course must be scheduled on T back-to-back with the same timing to ensure optimal use of classrooms and slots.
7. Departments must comply with the approved scheduling patterns in 5 ,4 and 6 above; and note that lengthy back-to-back sessions are discouraged.
8. Prior to the start of each semester the Registrar will ensure that no classes are scheduled in breach of this Policy and will discuss and resolve any issues with the relevant department.
9. Any request to vary from the approved scheduling schema must be submitted by the Dean and department head, with full justification, for approval by the Vice President of Academic Affairs.

Requests will be considered on a case-by-case basis, in light of factors including availability of classrooms/other resources and may not always be approved.

10. Where a faculty member teaching a class needs to postpone or cancel a class, they must send an email request to the department head (with a class make-up plan) giving as much notice before the class as possible. The department head must seek appropriate approval (see 11 and 13) unless the request is urgent (unplanned, same day notification), in which case the department head may approve and notify the authorized person (see 11 and 13).
11. Classes may only be postponed with approval from the Vice President of Academic Affairs (VPAA) and in the following cases:
    - Faculty member absence/unavailability at class time due to illness, work-related travel, or other approved reason.
    - An event (internal or external) requiring attendance by all class students or by the faculty member assigned to teach the class.
12. Where the VPAA approves a request for class postponement, the department must adopt one of the following approaches:
    - Make-up class on another date(s), announced to students well in advance.
    - Temporary assignment of another faculty member to cover the class at the sscheduled time and date.
13. Classes may only be cancelled with approval from the President and in the following cases:
    - An official public holiday on the same day as the class.
    - National Day Celebrations.
    - Classes held on the same day as the University major events.
14. Once the request is approved, the department head must notify the Deanship of Student Affairs (for student notification).
15. The Student Affairs department will extract student information from the records and send an appropriate notification as soon as possible to students affected using the University email address .
    - The standard notification wording for class postponement is:
    - "Dear Student,
    - Kindly note that the class of ***course name*** scheduled on ****date***** at **time*** has been postponed. The course lecturer will inform you about the make-up class time and date. Thank you."
    - "عزيزي الطالب
    - يرجى ملاحظة أن محاضرة ********* التي موعدها بتأريخ ******* الساعة ****** قد تم تأجيلها. سيقوم أستاذ المادة بإخباركم لاحقا بموعد المحاضرة التعويضية. مع الشكر."
    - The standard notification wording for class cancellation is:
    - "Dear Student,
    - Kindly note that the classes scheduled ****date**** are cancelled due to, ****Holiday, ....., National Day celebration****. Thank you."
    - "عزيزي الطالب
    - «يرجى ملاحظة أن المحاضرات ليوم ****** قد تم الغاءها بسبب *********. مع الشكر
16. The University recognizes that postponement or cancellation may be necessary in certain cases, nevertheless:
    - Department heads must ensure that adequate class hours are completed before the end of the semester; and must report to the VPAA that the class make-up plan is done, or if any circumstance has prevented it.
    - The Dean of Student Affairs must ensure that cancellation/postponement notifications are not sent to students without approval (see 11 ,10 and 13); and must at the end of the semester send a report to the VPAA of all cancelled and postponed classes in the semester.

# Grade Change

1. The University is committed to ensuring and maintaining academic integrity in all its operations. It also recognizes that there may be occasions when it is necessary, for legitimate reasons, to change a student grade that has been recorded. The measures in this Policy ensure that any necessary grade change is processed and recorded effectively, transparently and in accordance with principles of academic integrity.
2. Legitimate reasons for a grade change include errors in calculation, omission of marks for elements of assessment and outcomes of student appeals. This Policy covers the former (sometimes termed procedural errors); student appeals are dealt with in the Grade Appeals Policy.
3. Academic staff are responsible for uploading marks/grades to the system after peer review/ second marking and when the grades are published as final. After this time, the system is locked, and they cannot make further changes.
4. Where the academic staff member discovers any error in the grade after the grade modification period they must report this using the appropriate grade change form through the SIS, which must be approved by the HOD
5. On receipt of appropriate signed form, designated Registration staff will
    - Make the required amendment to the SIS.
    - Ensure that the change is communicated to the student.
    - Where a student identifies a (potential) procedural error they must discuss this with the academic staff responsible for the course, in line with the informal stage of the Grade Appeals Policy. If the existence of a procedural error is confirmed, it will be addressedd under 4.4 above by the academic staff member.

# Information Release

1. The University is committed to maintaining and managing records of applicants and students which are secure, complete, and accurate and which comply with the requirements of the Ministry of Education. The Student Record Policy provides for the content of the student record, which is the set of paper-based and/or online information that the University maintains on each applicant/student.
2. All student information (academic and non-academic) is confidential to the student, the University and any party authorized by the student. This Policy determines the protocols for releasing student information.
3. The University will permit student information release requests in the following circumstances:
    - Information from the student record will be released to the following:
        - Students (to their own record).
        - University personnel (for legitimate reasons).
        - Parent/guardian/Third party (if authorized by the student).
    - Applications for release must be made to the Registrar or designee.
    - The student must notify Registration to give permission for information release.
    - The authorized person (not student) must present acceptable identification.
4. The following student information release requests will be denied:
    - Requests for mass listings of directory information.
    - Requests to remove the student record or any content from Registration.
    - Requests for copies of the record or content to be removed from Registration.
    - Requests from students to remove from Registration any documents from other institutions such as high school certificates, university transcripts, etc. submitted to support

an application for admission or transfer credit .

5. Release / copies of University transcripts:
   - A University transcript is official only if University-issued, signed and sealed.
   - A University transcript will not be released to a third party without written student consent and/or if the student has outstanding balance(s) to pay.

# Student Records

1. The University is committed to maintaining and managing records of applicants and students which are secure, complete, and accurate and which comply with requirements of the Commission for Academic Accreditation (CAA) and the Ministry of Higher Education and Scientific Research (MOHESR). The University recognizes its legal responsibilities, the rights of students and its mission to promote student welfare and development and aims therefore specifies robust measures for the maintenance, update, security, and confidentiality of student records.
2. The student record is the set of paper-based and/or online information that the University maintains on each applicant/student. Physical and electronic records have the same content, except the electronic copy will not contain the registration form (kept in on-line application module), as shown below:

| |
|---|
| Original student entry qualification (or attested copy) |
| Copy of Emirates ID |
| Copy of the student passport |
| Copy of family book (for UAE national students) |
| Photographs (passport size) |
| Completed admission form |
| Results of the English entry exam |
| Results of other required proficiency exams (e.g. EmSAT) |
| Remarks of head of department/program leader after student interview |
| Copy of exemption letter for credit allowed for prior study (if any) |
| Copies of academic or disciplinary warnings while valid (if any) |
| Medical certificates or reports for disability (if any) |
| Medical certificates or reports for students enrolled in RC, EMC and MLS |
| Copy of the final award (signed by student as proof of receipt) |

3. Security files is of paramount importance. Therefore, all student records are kept in the secure University storage cloud facility.
4. Access to student records is strictly controlled as follows:
5. Student Access: is permitted (to own record) on written request. Permission will not be given if the student has an outstanding balance to be paid.
   - University Personnel Access: is permitted to University staff with a legitimate requirement (including academic advisors).
   - Third Party Access: is permitted with written authorization by the student and will not be given if a student has an outstanding balance to be paid.
   - Parental Access: Parents of dependent students may make a written request to access the student›s record, with or without student permission (students are considered dependent

unless they notify the University otherwise).

---

[24] Such documents are kept in the student record and form an integral part of the file. They are the property of the College until returned to the student upon graduation or withdrawal.
[25] See also the Information Release Policy.

# Student Code of Conduct

1. This Policy applies to all officially enrolled University students, whether registered as full-time, part-time, visiting or other mode. This Policy covers
   - All activities where the University is represented at internal, local, national or international conferences, functions, events or though exchanges.
   - All activities that utilize, or are facilitated by, University infrastructure, equipment or services.
   - All activities that take place outside University but are run by, endorsed, or funded by the University or by University-associated entities, internships and/or placements.
   - All activities that take place online which are created, authorized, sponsored or funded by the University, or involve people who identify themselves as University students.
   - All activities that take place on or off campus organized by Student Affairs or other University departments, students' societies and/or student clubs.
2. The University is an academic community committed to the educational and personal growth of its students. In order to promote a healthy atmosphere in the University, any behavior that infringes upon the rights, safety or privileges of students or staff and/or impedes the educational process is deemed unacceptable and may lead to sanctions, including (in extreme cases) dismissal from the University.
3. All enrolled University students are obliged and expected to abide by and comply with established University policies and act accordingly while on University premises or participating in University activities that take place off-campus and to conduct themselves as responsible citizens.
4. In order for the University to flourish as an academic community, its members are expected to commit to care, cooperation and adherence to standards of behavior. The University therefore reserves the right to discipline or impose sanctions upon any student whose behavior violates this Policy.
5. The University Code of Conduct consists of the following rules and regulations which students are expected to abide by and comply with:
   - Act in accordance with the values, principles, policies and procedures of the University, as active contributors in building a collegial learning community and the positive University reputation.
   - Undertake their academic work with integrity and honesty, acting at all times to the highest ethical standards.
   - Interact fairly and in good faith with others and respect other viewpoints, including cultural or religious perspectives as part of a culture that values academic freedom and debate.
   - Communicate with and about members of the University community with respect, consideration and courtesy, through any mode of communication, in person, through telecom ways and online (including email, Zoom, MS Teams and social media channels).
   - Use University property, resources and facilities responsibly and sustainably, in accordance with relevant policies and consider the needs, choices, health and safety and well-being of others.

- Provide the University and maintain, accurate personal and contact details and read and respond where necessary to University correspondence in a timely manner (this includes regularly checking student email, SIS and other official platforms).
- Protect the confidentiality and privacy of personal records and University correspondence.

6. To commit to adhering to the Code of Conduct and other University rules and regulations, all students must sign the following consolidated pledge at the time of admission:
   - As a University Student, I pledge to follow the following rules and conditions:
   - Show respect to everybody at the University (students, faculty and staff).
   - Avoid any unacceptable behavior such as laughing aloud, swearing, fighting and the like.
   - Avoid eating or drinking inside classes and other facilities.
   - Avoid smoking at any area inside the University premises.
   - Respect the general appearance and wear conservative clothes. Avoid wearing heavy make-up and the multi-dying of hair (for females).
   - Not to have any metal piercings in face (eg metal rings in lips, eyebrows and nose) which contradict local traditions.
   - Full compliance with the rules and regulations within the university campus and its associated facilities (such as university parking areas, seating zones adjacent to the campus, during event organization, and others).
   - Not to use or exchange any unethical or illegal materials, or to use computers for any non-educational purposes.
   - Not to invite or receive any people from outside the University without the administration's permission in advance.
   - Not to take photos using digital or mobile cameras without the administration's permission in advance.
   - Preserve University assets (computers, furniture...) and recognize that any damage to them will be referred to the University Discipline Committee.
   - Recognize that the University has the right to take photos of its students in celebrations, student activities and public events eg graduation and may use them in its advertisements and that students who don't wish to appear must mention this at the time the photographs are taken.
   - Not to cheat in exams and to act with academic integrity in all activities (eg homework, projects...).
7. Unacceptable conduct includes (but is not limited to) the following:
   - Harassing, sexually harassing, bullying, or engaging in any form of interpersonal, psychological, sexual, or physical violence.
   - Assaulting or using physical violence against others.
   - Jeopardizing the safety of others or violating human rights.
   - Committing fraudulent or corrupting acts that would unfairly advantage or disadvantage other students.
   - Disrupting, interfering with, or undermining University activities, events, functions, or teaching.
   - Adversely affecting the safety and well-being of others and/or undermining the values of the University and the UAE society.
8. The University will manage any breaches of this Student Code of Conduct in accordance with its policy framework and the process will be handled by the Student Affairs Department.
9. The available penalties for breaching the Code of Conduct, selected/applied depending on the situation and in compliance with University regulations, are as follows:
   - Verbal warning for the student.
   - The student writes an official pledge not to repeat the misbehavior.
   - A written warning is issued for the student and the guarantor parent or employer is informed.
   - A final written warning is issued followed by prevention from studying or expulsion from the University.

10. Any member of the University community may report misconduct, violation or breach of this Policy.
11. Complaints about misconduct must be submitted to the Student Affairs office. The timeline from receipt of a formal complaint to conducting a formal hearing is five working days.
12. If the Dean of Student Affairs feels that mediation to resolve a dispute is possible, s/he might meet separately with the individuals concerned to reach an acceptable solution to all individuals concerned.
13. When there is a reason to believe that a student's behavior is endangering the safety of fellow students or the University community, or causing their safety to be considered at risk, the Dean of Affairs may confirm the immediate suspension of such a student. The Student Affairs Dean may confirm the immediate suspension of such a student for an interim period pending a conduct hearing and recommendation of the Vice President for Academic Affairs
14. The Dean of Student Affairs oversees the hearing process and the following provisions apply:
    - Students who have been suspended from University due to misconduct are not permitted to access University premises (for campus visits, attending classes, participating in student clubs/activities, etc). unless special permission is granted by the Dean of Student Affairs. Exceptions are made only if a student is required to meet a faculty/staff member.
    - If the Disciplinary Committee decides that the case requires disciplinary action, the Disciplinary Committee will make its recommendation to the Dean of Student Affairs.
    - If disciplinary action is recommended, it will be taken in line with the University Disciplinary Policy.
    - The sanctioned student has the right to appeal against the Disciplinary Committee decision within three days from the day he/she receives the Disciplinary Committee›s decision.
    - If the student is dismissed, his financial situation and any refunds will be according to the University Refund Policy.
    - All violation reports and records of proceedings will be kept confidentially in the student records held by the Student Affairs Department.

# 1. Student Rights and Responsibilities

1. University students are members of an academic community that is committed to shared ethical principles and concepts of courtesy. This Policy outlines the rights, responsibilities and behavioral expectations of students during their period of study at the University. It ensures compliance with UAE laws and provides students with information about what they should expect from the University and what the University expects of its students.
2. This Policy should be read in conjunction with the Student Code of Conduct. Both documents are included in the Student Handbook, which is issued to all students every year and available on the University website & LMS.

## 1.1. Students' Rights

**As members of the University community, students have the right to:**

- Be provided with a quality educational experience and program.
- A friendly atmosphere in which they can study and develop academically and personally.
- A healthy and safe environment, including protection from unreasonable search and seizure.
- Remain free from discrimination on the basis of race, ethnicity, gender, age, religion, creed, national origin or disability.
- Integrity, confidentiality and security of their records and academic performance reports.
- Discuss their grades with academic staff teaching on their program and review records kept in their student file.
- Readily access University policies and procedures, including those relating to cheating, plagiarism and low attendance and the consequences and/or penalties for noncompliance.
- Receive fair and equitable treatment in all aspects of University life including academic and disciplinary disputes, as set out in related policies, including being accompanied by a representative or advisor.
- Make appeals against academic and/or disciplinary actions, as provided for in the Grade Appeals Policy, Student Grievance & Appeals Policy.
- Engage in inquiry and discussion, exchange thoughts, opinions and views and speak or write on any subject (except in breach of University regulations or federal or local laws).
- Organize and represent themselves through the Student Council to discuss with management of any problems and/or concerns.
- Be given course outlines at the beginning of each semester (indicating number of credits, course description, objectives, learning outcomes, assessment and references to supplementary material).
- Be informed of program graduation requirements, admissions procedures, course descriptions, prerequisites, co-requisites, course availability, timetable and costs.
- Expect that classes will start and end on time, and be notified of class cancellation immediately and be informed of any changes to rules relating to classroom procedures.

## 1.2. Student Responsibilities

**As members of the University community, students are expected to:**

- Comply with all laws of the UAE.
- Follow and implement all University regulations and policies.
- Adhere to the University Code of Conduct and provisions of the Student Disciplinary and Appeal Policy.
- Comply with the University dress code.
- Show respect to the UAE Society, Islamic values and other cultures.

- Practice ethical use of information technology available at the University.
- Comply with the Academic Integrity Policy and ensure that all work for their program (coursework, final exams and other materials) is a product of their own ideas, efforts and research.
- Maintain a minimum of %70 attendance on every course, recognizing the course tutor's right to enforce attendance rules and noting that breaches are liable to academic sanctions up to cancellation of course registration.
- Arrive punctually for classes and activities and remain for the scheduled duration, assuming personal responsibility for any classes missed.
- Complete and submit all coursework on time and write tests and exams at the scheduled times.
- Maintain a minimum CGPA of 2.0, noting that poor performance is liable to academic sanctions up to cancellation of program registration.
- Follow University procedures to register, drop/add or withdraw from a course and/or program.
- Recognize the course tutor's right to determine course content, methodology and evaluation and to set assignment deadlines and penalties for failure to meet them.
- Never in any circumstances commit a serious breach of the Student Code of Conduct.
- An indicative list of prohibited actions is provided at Appendix 1. It should be noted that this list is illustrative and not exhaustive.

## Appendix -1Serious breaches of the Student Code of Conduct

The Students Rights & Responsibilities Policy sets out entitlements and expectations of students as members of the University community. Compliance with the Policy and Code of Conduct ensures appropriate student behavior. For absolute clarity, this Appendix provides an indicative (but not exhaustive) list of prohibited actions. Breaching the Code or committing any of these acts will lead to action under the Student Disciplinary Policy.

## Students must never in any circumstances:

- Act or conduct themselves so as to breach or obstruct or hinder the application of the Student Code of Conduct, including assisting/inciting others to breach the Code.
- Commit an academic offense in breach of the Academic Integrity Policy.
- Trespass or forcibly enter University-owned, leased or controlled premises without permission.
- Make unauthorized use of computer system or access codes.
- Destroy, vandalize, misuse or steal property (including intellectual property) of the University, its members or visitors; or fail to report lost/found items to security guard /Facilities office.
- Willfully fail to comply with reasonable directions of University officials (eg faculty, staff, security personnel and other employees) or knowingly give them false information.
- Fail to provide identification or other documentation to security guards if requested.
- Insult or disrespect University academic, administrative, security or management staff.
- Violate safety regulations (eg fail to evacuate premises in an emergency; falsely report an emergency; possess/use or alter/tamper with University owned emergency or safety equipment; possess fireworks, firearms, weapons or other explosive devices) or take any action that might compromise the safety of others.
- Harass or threaten/cause physical or mental harm to others or otherwise create a hostile environment within the University community.
- Physically attack University academic, administrative, security or management staff, visitors

or fellow students.

- Promote hostile behavior, obscene language or intent to damage reputation by an individual or group through use of technology including (but not limited to) websites, social networking sites, phones and emails.
- Disrupt classroom activity or any other University operation by any action(s) or that interfere or prevent others from freely participating in a University activity or program.
- Petition to change University decisions and/or demonstrate inside or outside the University.
- Print/release any information about the University, including contacting media (eg news, radio, newspaper or television) without prior permission from the University.
- Inappropriately make physical contact or intentional touching of a body part and indecent exhibition of intimate parts of the body.
- Gamble on University premises.
- Record, store and/or distribute images, videos or other content without consent.
- Impersonate/pretend to be another person or use another student ID for any purpose.
- Violate any UAE law.

# LRC Code of Conduct

1. The University has established its Learning Resources Centre (LRC) to support the learning and research of students, staff and permitted visitors. As an academic community dedicated to creation, dissemination and application of knowledge, the University is committed to fostering an intellectual and ethical environment. It therefore seeks to ensure that all LRC users obtain the maximum benefit from the service, in a pleasant environment which is friendly, safe, secure and relaxed.
2. This Code of Conduct covers the behavior expected of LRC and relates to use of all types of LRC materials, computers, software and the academic network.

## 1. User Identification

Student or User ID card must be carried at all times.
Student or User ID card must be shown to LRC Reception or Security staff on request.

## 2. LRC Opening Hours

Users must be aware of the LRC opening hours.
Users must stop using facilities and leave promptly when asked to do so by LRC staff.

## 3. User Behavior

Users must treat LRC staff and other users with respect and courtesy.
Users must refrain from shouting, using abusive, discriminatory, indecent or offensive language, comments and/or behavior and any type of verbal or physical harassment.
Users must contact a member of staff if impacted by conduct of another user in breach of these rules.

## 4. Noise

Silence must be observed in the silent study area.
Group study rooms in the LRC must be used for group work only.
All noise and disturbance must be avoided in all areas of the LRC.

## 5. Mobile Phones

Mobile phones must be switched off or set to silent mode before entering LRC premises.

## 6. Music

Music played via speakers is not allowed in the LRC.
Music may be listened to via headphones from a personal laptop or LRC computer, if it is at

low volume that is not audible to other users.

[1] LRC denotes the University Library & Learning Resources Centre, sometimes referred to as 'Library'.

## 7. Eating and Drinking

Eating and drinking is strictly prohibited in all areas of the LRC.

## 8. LRC Transactions

- No transactions may be undertaken without a student or User ID card.
- LRC users are responsible for all materials issued to them; these should not be passed on to anyone, as the user remains responsible for all items issued.
- Items on loan must be returned within the specified time and if requested by a member of staff, to enable fair use by all users.
- Users must pay any fines or charges incurred under the LRC borrowing policy. Failure to pay outstanding charges may result in withdrawal of services or withholding of University grades/awards.

## 9. Theft and Vandalism

- Before leaving the LRC, users must make sure that all LRC books or other items have been properly issued to them.
- If a user is found in possession of material that has not been properly issued, this will be treated as a serious breach of the Code of Conduct.
- Users must treat all LRC materials with due respect and care and must not write, highlight or underline in books or mutilate items.
- Users must not misuse or damage any furniture or equipment.
- Users must contact a member of staff immediately if any LRC property is discovered to have been vandalized.
- Vandalism of any LRC property or premises is subject to disciplinary action.

## 10. Computing Facilities

- Users must not tamper with the security of LRC computers.
- In line with the University IT facilities security requirements, users must not download any unauthorized materials, software, etc.
- Permission by LRC staff must be given in advance, where, for course support purposes only, a user needs to download software onto an LRC computer.
- All LRC users are bound by the University regulations for use of computing facilities when using any LRC computing and/or networked facilities and external electronic resources.
- Under this Policy, all users of the University LRC must abide by the rules set out above. Failure to do so may result in being asked to leave LRC premises and may incur other sanctions under University disciplinary policies.

# LRC E-Resources Usage

1. The University has established its Learning Resources Centre (LRC) to support the learning and research of students, staff and authorized visitors. As an academic community dedicated to creation, dissemination and application of knowledge, the University is committed to fostering an intellectual environment through an LRC collection that provides the maximum benefit to all users.
2. This Policy governs use of the LRC collection of electronic information resources such as commercial databases, open-access resources, institutional repositories, videos, e-journals, image collections, e-books, e-newspapers, articles, information in full text databases, etc. It applies to University use and to inter-library loans, in order to:

- Ensure fair use of e-resources for all LRC users.
- Raise user awareness of the legal, secure, and ethical use of e-resources in the University and in the UAE and the constraints on their use.
- Provide safeguards that prevent inappropriate use of e-resources.

3. It is the responsibility of individual users to ensure that the use of electronic resources does not breach the terms and conditions specified in the license agreements. Licenses vary from publisher to publisher.
4. E-resources may be searched, browsed and material may be downloaded and printed as single copies of articles as in the case of printed LRC material. Downloading or printing of a complete book or an entire issue or a volume of one or more journals (called systematic downloading) is strictly prohibited under this Policy and the LRC Reproduction & Copyright Policy.
5. University e-resources must only be accessed in classes, at library workstations or via the University network via usernames and passwords. Actions permitted are:
   - Viewing, downloading, copying, printing, and saving search results.
   - Viewing, downloading, copying, printing, and saving individual articles.
   - Using e-resources for scholarly, educational, or scientific research, teaching, private study and clinical purposes.
   - Sending a copy of an article to another authorized user.
   - Posting the URL to the publisher›s version of the article on a class website (publisher links will allow only authorized users access).
6. Any user who makes an unauthorized copy or irresponsibly uses e-resources will be considered to have infringed copyright and breached this Policy. They will be subject to University disciplinary action and there may also be legal consequences.

# LRC Reproduction & Copyright

1. The purpose of copyright law is to promote the progress of useful arts and science by protecting the exclusive right of authors and inventors to benefit from their works of authorship. This Policy is derived from the UAE Copyright Law (see Appendix 1) and designed to ensure its implementation.
2. The scope of copyright law applies to printed materials, electronic information resources, inter-library loan (ILL), resources that are free from copyright law; these are covered in the sections below. The Policy also includes penalties for misuse and/or breach of copyright and responsibilities of specific individuals.

## Copying that complies with copyright law

1. Copyright law allows copying for academic purposes which falls within acceptable copying parameters as indicated below. Detailed requirements relating to permitted copying are described in Appendix 2.
2. Copyright Law for Printed Resources
   - Single photocopying for instructors: photocopies for research work, to teach or to prepare for teaching.
   - Multiple copies for classroom use: not more than 1 copy per student and subject to specified requirements.
   - Copying an entire book: this is not allowed.
3. Copyright law for Non-Print / Electronic Information Resources
   - Use of Licensed system/ Databases: covered by licensing agreements for non-profit use, with different parameters for online research services, streaming video and audio products, MARC records, scholar/research profiles and LRC catalogue enrichment.
   - Use of images in the classroom: entire images, photographs or illustrations may be used, provided that no more than %10 or 15 images (whichever is less) is taken from any single source.
   - Use of videos in the classroom: full-length videos and motion pictures may be shown in class but may not be copied or distributed.

1. Copyright Law for Interlibrary Loan (ILL): the same provisions apply to books and e-resources obtained through ILL and the University Learning Resource Center will reject any ILL request that may violate copyright law.

## Resources that are copyright free

1. 2. Works that are not eligible for copyright protection:
   - Works that have not been fixed in a strict form of expression.
   - Titles, names, short phrases, slogans, familiar symbols/designs, variations of typographic ornamentation, lettering, coloring, lists of ingredients or contents.
   - Ideas, procedures, methods, systems, processes, concepts, principles, discoveries or devices.
   - Works consisting entirely of information that is common property and containing no original authorship.
   - Works that have been assigned to the public domain by their author.
   - Works that have entered the public domain because copyright has expired.
   - URLs in the public domain.

## Monitoring copyright compliance

1. The VPAA and the LRC will monitor lecture slides and other teaching materials on a random basis (approx. %10 of courses) to check for any copyright infringement.
2. The LRC photocopying station will not allow copying of an entire book or taking of multiple copies in breach of 4.4. Details of documents copied and user details will be recorded on the LRC form (see Appendix 3).

## Penalties for misuse

1. Penalties for copyright infringement can be harsh under UAE copyright law, which allows for imprisonment for a period of up to 5 years and a fine of AED 100,00 to AED 500,000 or one of these two penalties.
2. The University will also penalize copyright infringement: penalties include issuing a warning and/or termination for faculty and staff and expulsion for students.

## Appendix -1Extracts from UAE Federal Law No.7 Concerning copyrights and neighboring rights (published in the Official Gazette of UAE)

[Concerning copyright protection]

"This law shall provide protection to authors of the works and the holders of the neighboring rights, in case aggression against their rights occurs in the state. Protection does not extend to mere ideas, procedures, methods of work, mathematical understandings, principles and abstract facts.

This law shall define author's rights. These rights include the following:

- The right to determine first publication of the work.
- The right of writing the work in his name.
- The right to protest alteration of the work if the alteration leads to distortion or mutation.
- The right to withdraw his work from circulation.
- The performers and their general successors enjoy a literary right, which is not assignable or prescribe able, but authorizes them to do the following:
- The right of having the performance in their names whether live or recorded.
- The right to suspend any distortion, mutilation, modification or derogation action, which would be prejudicial to their status.
- The law properly covers all substantive issues pertaining to author's rights and neighboring rights."

[Concerning Penalties]

"A penalty of imprisonment for a period of no less than six months and a fine of no less than AED 100,000 or either of these two penalties, shall be imposed on whomever without the written

permission of the author or the holder of the neighboring right or their successors commits any of the copyright violation."

# Appendix -2Copying Parameters that Comply with UAE Copyright Law

Copyright law allows copying for academic purposes which falls within acceptable copying parameters. These are outlined in the Policy and the detailed requirements/parameters are set out below.

1. **Copyright Law for Printed Resources**

- a) Single Photocopying for Instructors
- Faculty are permitted to make photocopies for research work, to teach or to prepare for teaching, as per the examples below:
  - A chapter from a book
  - An article from a periodical or newspaper
  - A short story, short essay or short poem, whether from a collective work
  - A chart, graph, diagram, drawing, cartoon or picture from a book, periodical or newspaper
- b) Multiple Copies for Classroom Use
- Multiple copies, which should not be more than 1 copy per student, may be made by or for a faculty for course classroom use or discussion, provided that all the following requirements are met:
- The copying is brief. In this context, brief means:
  - Poetry: a complete poem if less than 250 words and printed on not more than two pages or an excerpt from a longer poem of not more than 250 words.
  - Prose: a complete article, story or essay of less than 2500 words or an excerpt from a longer prose work of not more than 1000 words or %10 of the work, whichever is less.
  - Illustration: one chart, graph, diagram, drawing, cartoon or picture per book or per periodical issue.

- The copying should not have an improper cumulative effect. For copying not to have an improper cumulative effect:
  - The copying of the material must be for only one course.
  - Not more than one short poem, article, story, essay or two sections may be copied from the same author or more than three from the same collective work or periodical volume during one class term.
  - There must not be more than 9 instances of such multiple copying for one course in one class term
  - The copying should be spontaneous, i.e. it is at the instance and inspiration of an individual teacher and the decision to use the work and the time for its use for effective teaching are so close that it would be unreasonable to expect a timely reply to a request for permission.
- The copying does not violate any of the following general prohibitions:
  - Copying shall not be used to create, replace or substitute for anthologies, compilations or collective works.
  - There shall be no copying from workbooks, exercises, standardized tests and test booklet answer sheets or any similar materials intended to be "consumed" in the course of study or teaching.
  - Copying shall not substitute for the purchase of books, publisher's reprints or periodicals.
  - Copying shall not be directed by anyone other than the teacher of the class.
  - Copying shall not be repeated in more than one semester with respect to the same item by the same teacher.
  - No charge shall be made to the student beyond the actual cost of photocopying.

- c)Copying an Entire Book

It is not allowed under UAE copyright law, for a faculty member to photocopy or scan an entire book for a classroom purpose or for use in an online learning management system such as Blackboard or other e-learning system.

Faculty members should contact the LRC to discuss options if the department has ordered a textbook which has not arrived by the start of the semester.

Under copyright law, students and faculty members may copy any portion of a book as long as it is used for personal learning or teaching purposes and for non-commercial use. This copy must not then be freely made available online, as that would violate the copyright holder›s rights. The LRC cannot authorize photocopying a whole book for an instructor or student. The LRC recommendation to avoid breach of the law is to copy no more than %10 of a whole book (although a larger proportion of copying may be allowed based on the nature of the work as a whole).

Copying is not a substitute for the purchase of books or periodicals.

2. Copyright law for Non-Print / Electronic Information Resources
    - a)Use of Licensed Systems/Databases
    - The library's non-print / electronic resources are covered by licensing agreements for non-profit use by faculty members, students and staff for educational and research purposes. LRC users may use the resources within licensed services consistent with the principles of "fair use" or "fair dealing". The recommended guidelines for the resources in the licensed systems are as follows:

- Online Research Services The services allocated for online research may be used for internal research or educational purposes within these parameters:
    - Research and Analysis: LRC users can use the resources to display and use them for the purposes of illustration, explanation, example, comment, criticism, teaching or analysis
    - Digital and Print copies: For internal/personal use as allowed under the principle of "fair use" or "fair dealing", for use in legal proceedings, to furnish such information to a third party for the purposes of anticipation of regulatory approval or purposes provided that the recipient is advised that the copies are not for distribution.
    - Scholarly sharing: LRC users may provide to a peer group or colleague minimal, insubstantial amounts of materials for personal/scholarly use and/or educational research in the form of hard copy or electronic, provided that in no case is any such sharing is done in a manner as to act as a replacement for the recipient's educational institution's own subscription to either the service or the purchase of the underlying work.
- Streaming Video and Audio products: LRC users shall not download or otherwise copy streaming video or audio. In the case of content that can potentially be publicly performed, users must secure permission from the licensor or the copyright holder for any public performance other than reasonable classroom/educational uses.
- MARC records: MARC records must be kept in the LRC Online Public Access Catalogue (OPAC) or shared online catalogue.
- Scholar/Research profiles: These can be used to facilitate research and collaboration among colleagues but may not be exported or otherwise exploited for mass mailing or similar marketing purposes.
- LRC Catalogue enrichment: The LRC may use metadata records for enriching its own catalogue but may not convert these into MARC format or distribute or display the enrichment elements in other applications, catalogues or websites.
- b) Use of Images in the classroom
    - The recommended guidelines are that entire image(s), photograph(s) or illustration(s) may be used, provided that no more than %10 or 15 images (whichever is less) are used from any single source.
- c) Use of Videos in the Classroom
    - During class, it is permissible to show a full-length video or motion picture as part of classroom learning. However, this only permits displaying or performing it during class time

and does not permit copying or distributing a work or posting it on the public internet or selling it commercially. The recommended guidelines for using video from CDs, DVDs, databases and from the public internet in the classroom are

- No more than %10 or 3 minutes (whichever is less) of motion-based works
- No more than %10 or 30 seconds (whichever is less) of a song or video.

3. Copyright Law for Interlibrary Loan

The University Learning Resource Center (LRC) may provide books and other e resources in compliance with copyright law. The LRC has the right to reject any ILL request that may violate copyright law.

The following declaration will be added to any ILL request:

"The ILL agreement excludes document delivery of electronic resources that do not support respective license agreement and/or for which "walk-in" use is stipulated and/or enrolled/ employed status is required."

4. Resources that are copyright free
    - Works that are not eligible for copyright protection:
    - Works that have not been fixed in a strict form of expression (for example, choreographic works that have not been notated or recorded or improvisational speeches or performances that have not been written or recorded)
    - Titles, names, short phrases and slogans; familiar symbols or designs; mere variations of typographic ornamentation, lettering or coloring; mere listings of ingredients or contents
    - Ideas, procedures, methods, systems, processes, concepts, principles, discoveries or devices, as distinguished from a description, explanation or illustration
    - Works consisting entirely of information that is common property and containing no original authorship (for example: standard calendars, height and weight charts, tape measures and rulers and lists or tables taken from public documents or other common sources
    - Works that have been assigned to the public domain by their author
    - Works that have entered the public domain because the copyright on them has expired
    - URLs in the public domain. Note: when a user points to a URL for classroom use, copyright permission includes use in a course pack (permission is not needed for a list of links to LRC databases).

# Tuition Fees

The University sets out clear and consistent information about its fees and financial policies.

The Policy is established in compliance with the requirements of the Commission for Academic Accreditation (CAA) and relevant Directives of the Ministry of Higher Education and Scientific Research (MOHESR).

The University will communicate clearly with students about tuition fees, other student fees and student services fees. Fee information will be made available on the University website and in the Student Handbook.

The University reserves the right to change or update any tuition or non-tuition fee during the academic year. The fee schedule will be updated and students will be informed of the change prior to the start of the semester in which the new fees apply.

Scholarships and financial aid are available to all University students, as set out in the Student Scholarships Policy and the Financial Aid and Discount Policy.

## General Terms and Conditions

1. Students are responsible for fulfilling their financial obligations to pay tuition and other fees by the University deadline(s).
2. At the beginning of each semester, each student must either pay their fees in full or (at minimum) make a down-payment: see 8.
3. If a student does not meet the University payment deadline(s), the following actions will be

taken:

- SIS account for student services will be deactivated.
- Final exams results will be withheld.
- Students will not be allowed to register for the next semester.

4. If a student withdraws permanently they must pay any outstanding fee balance.
5. All University tuition fees and non-tuition fees are subject to %5 VAT, except where the item is exempt according to the Federal Tax Authority (FTA).

# Billing and Invoicing

1. 1 The following arrangements apply to University fee billing and invoicing:
   - Invoices will be issued to students on completing registration (and are subject to change until the end of add/drop period).
   - Invoices will include the approved schedule of fees and other charges.
   - Tuition fees will be calculated based on the approved rates per credit hour and the number of credit hours the student has registered for.
   - Invoices will comply with Federal Tax Authority (FTA) laws and regulations.

# Payment Methods and Schemes

1. **Payment methods are as follows:**
   - Payment through online payment gateway.
   - Bank transfer
   - Payment by credit/debit card at cashier counter.
   - Payment of cash at cashier counter.
   - Payment by current date/post-dated cheques at cashier counter.
1. **Payment schemes are as follows:**
   - Single payment for semester tuition fees.
   - Installment payments plan, scheduled as follows:

| **Long Semesters** | | | |
|---|---|---|---|
| Installment # | % of payment | Method of Payment | Payment Terms |
| 1st payment | %25 | Online/Card/Cash | On Registration |
| 2nd payment | %25 | Online/Card/Cash/PDC | Week 4 |
| 3rd payment | %25 | Online/Card/Cash/PDC | Week 8 |
| Final payment | %25 | Online/Card/Cash/PDC | Week 12 |

| **Short Semesters** | | | |
|---|---|---|---|
| Installment # | % of payment | Method of Payment | Payment Terms |
| 1st payment | %50 | Online/Card/Cash | On Registration |
| 2nd payment | %50 | Online/Card/Cash/PDC | Week 5 |

1. Students will be strongly recommended to submit post-dated checks (PDCs) at the beginning of each semester.
2. Any exception to the payment scheme schedules will be subject to approval by the Finance Manager and Collection Supervisor which will only be given where the student has a good prior payment record and is in good academic standing.
3. Students with outstanding balance of AED 5,000 or below shall be allowed to register in the following semester.

# Refunds

1. University students are entitled to claim refund of fees paid for courses dropped in the semester add/drop period as follows:

| **Long Semester** | |
|---|---|
| Drop Request Period | Course Fee Refund |
| Add/Drop Period 1st & 2nd weeks | %100 |

| **Short Semester** | |
|---|---|
| Drop Request Period | Course Fee Refund |
| Add/Drop Period 1st week only | %100 |

2. The University Application Fee is not refundable. Full payment of tuition fees is required if a student withdraws or postpones studies after the add/drop period. Fees will not be refunded in the following circumstances:
   - To students who withdraw or drop courses after the add/drop period.
   - To students dismissed for disciplinary issues or poor academic performance.
   - To students who receive an official University letter confirming registration for the new semester and wish to drop courses before the add/drop period.
3. Where fees have been paid in advance (in full or in part, either by the student or the sponsor) and the student withdraws before the end of the add/drop period and there is no pending balance in the student account, an application for refund of fees paid may be submitted and will be granted.
4. Where a student has paid (in full or in part) and the fees are subsequently paid by the student's sponsor, an application for refund of fees paid by the student may be submitted and will be granted.
5. Where required textbooks (hardcopy or E-book) for the semester are unavailable in the bookstore, refunds of %50 of the book/study material fees will be credited back to the student account.
6. In other exceptional circumstances, students may submit a refund application (with all supporting documents) to the Accounts Receivable Department. DoFA will evaluate the supporting documents to determine whether the case is approved or rejected.

# Sponsored Students

1. An official communication approval letter that includes the starting date/semester must be provided by the sponsor stating that the student is awarded a full/part sponsorship.
2. The University must confirm and acknowledge to the sponsor party the receipt of the student sponsorship award (if applicable).
3. The University and the student must comply with all sponsor requirements (e.g. number of credit hours per semester, minimum CGPA, etc).
4. If a student receives an external sponsorship while already holding a University scholarship, the scholarship will be automatically deactivated unless the sponsor and the University formally agree to allow both to remain active.
5. If a student graduates or is required to withdraw while still having an available sponsor credit balance, the Accounts Receivable (AR) team will immediately notify the sponsor of the credit status and ask for instructions on how to handle the remaining funds. If the sponsor does not respond to the University AR team within three days, the University will issue the refund

directly to the beneficiary (the student).

6. A Know Your Customer (KYC) check is required for all non-governmental parties.
7. Sponsored students are personally responsible for paying fees in the following circumstances:
    - Any other fees not covered by the sponsor.
    - If the student does not comply with all sponsor requirements.
    - If a sponsorship agreement is cancelled.

# Student Scholarships & Financial Aid

1. The University is committed to fulfilling its social responsibilities and serving the community. It is also committed to supporting academic excellence and ensuring, as far as possible, that academic education is available to students regardless of their financial situation. This Policy sets out how the University will offer and manage its financial aid programs.
2. Each year, the amount available for student financial aid and discounts will be calculated as a proportion of the total tuition fees revenue for that academic year. The amount will therefore increase or decrease compared to the previous year, based on changes in enrolment and credit hours each semester. The funds allocated for Financial Aid & Discounts/Offers must be within %2 of the total approved SSFA budget.sc granted in the academic year. Funds allocated need to be provided by FD to SSFA team members at the beginning of each semester.
3. The University will establish a Financial Aid Committee (FAC) to consider student applications for financial aid. The FAC's responsibilities, scope, aid percentages, and mode of operation will be confirmed each year by the President. The FAC and its chairman will report to the President. FAC membership is as follows:
    - Director of Marketing and Enrolment (Chair).
    - Finance Manager.
    - Student Affairs Manager.
    - Recruitment, Admission and Scholarships Manager.
    - Student Scholarships & Financial Aid Officer (SSFAO).
4. Students may apply for financial aid and/or discounts, provided that they:
    - Achieved either a minimum grade of 80 percent in secondary education final examinations (for first-year students) or a Cumulative Grade Point Average (CGPA) of 2.5 (for existing students).
    - Are in good academic standing.
    - Are enrolled in twelve (12) credit hours in the Fall and Spring semesters or six (6) credit hours for Winter and Summer terms.
5. Students must submit an application for financial aid, with supporting documents demonstrating their need. Students must apply each semester and applications must be received by the published deadlines.
6. The FAC will consider each application and recommend the amount of financial support to be granted based on the student›s financial circumstances and academic status. Financial aid or discount will range from %10 to %50 of tuition fees due, depending on budget availability etc.
7. The FAC will forward a list of recommendations of students to receive financial aid for the semester to the DOFA and then the President for approval and subsequently follow the chain of approvals as per the limits of authority. Once approvals are completed, the approved list will be sent to SSFAO for implementation. For the cases outside this policy, the list will be sent further to Chairman' office for approval. .
8. 8 The SSFAO will maintain full records of University financial aid programs and will report to the Director of Marketing and Enrolment , with details of the amount allocated for financial aid and discounts for the year, the amount utilized up to that date, and the number of students who have benefitted up to that date.

# Scholarships

1. The University is committed to meeting student needs, fulfilling its social responsibilities and ensuring, as far as possible, that education is available to students regardless of their financial situation. Recognizing the financial challenges that may be faced by students and within the community, the University has established provisions for scholarships and discounts.
2. This Policy sets out the details of University scholarships and the arrangements in place to ensure that they are awarded and disbursed consistently, fairly and efficiently. University scholarship schemes are available to all students who meet the criteria and requirements. The schemes are listed below:
   - **Chairman's Scholarships.**
   - **University Scholarships.**
   - **Honor Scholarships.**
   - **Student Relatives Scholarships.**
   - **Social Responsibility Scholarships.**
   - **Employees Scholarships.**
   - **Strategic Partnerships Scholarships.**
   - **Postgraduate Scholarships for postgraduate students**
3. The University will publish a scholarships leaflet with details of the specific rates and discounts for each scholarship scheme. This will be made available on the website, noticeboards and other appropriate channels.
4. The amount to fund student scholarships shall be a percentage of the total revenue for the academic year. The overall fund (including financial aid and discounts) will not exceed %12 of the total revenue for that semester. The fund will increase or decrease depending on the enrollment figures for that semester.
5. The University reserves the right to amend scholarship rules, eligibility and discount levels at any time. Changes will be announced before implementation.

# Eligibility criteria for all scholarships:

- A scholarship application must be submitted by the student to the Student Scholarships & Financial Aid Office (SSFAO) before any award can be made (except in specific cases where approval from Chairman's Office or President's Office is granted).
- Applications received after the deadline cannot be considered unless approved by Recruitment, Admissions and Scholarships Manager (limited number, case by case applications)
- A student can apply for several scholarship programs, but he/she will be granted only one scholarship (whichever is higher value).
- New intake students will be eligible for the approved scholarship discount for the first 2 semesters provided they register in 12 credit hours per semester.. Limited exceptions may be considered and approved by DOME depending on the case (Force majeure, sickness).
- A student holding an existing scholarship granted under previous University policies may continue to hold it, subject to continued fulfilment of the scholarship terms and requirements stated in that policy. Once the scholarship is deactivated due to not meeting the terms and conditions, the student may apply under the current policy later unless the category of scholarship is not included in the current policy. Then, the old policy persists.
- Readmitted students will be considered under the current policy

# Ongoing scholarship maintenance:

- After the first semester from registration, scholarships will continue in each semester of the student's program without the need to reapply, subject to:
- Registration in at least 12 credit hours in a regular semester (6 in a short semester) and
- Maintaining the minimum of 3.0 CGPA.
- Compliance with any scholarship-specific maintenance rules (see 9).

# Rules for all University scholarships:

- Scholarships discounts do  apply to remedial/bridging/Foundation courses Scholarships (including free seats) apply to tuition fees only and do not cover other payments (e.g. administrative fees, book fees, lab fees, incomplete exam fees, repeat final fees, etc.).
- Scholarships and tuition fee reductions are non-transferable.
- If a student withdraws from classes during a semester without prior approval, this may result in the cancellation of the scholarship.
- If a student receives an external sponsorship while already holding a University scholarship, the scholarship will be automatically deactivated unless the sponsor and the University formally agree to allow both to remain active.
- If a student breaches the Code of Conduct or Academic Integrity Policy, he/she will forfeit any approved scholarship for the remaining period of study at the University following a formal communication from the disciplinary committee to SSFAO.
- If a student provides false documents to obtain a scholarship, he/she will forfeit any approved scholarship and will not be eligible for any scholarship for the duration of his/her study.
- If a student suspends study for two consecutive semesters or more without a proper application, he/she will forfeit any approved scholarship (but may apply for a new scholarship on subsequent registration under the current policy).

# Scholarship-specific rules:

### Chairman's Scholarships

- Eligibility: Students who are UAE residents and achieved %97 or over in the high-school certificate .
- Amount: %100 (tuition fees).
- Notes: Five (5) scholarships are available, selected by the University and announced at the start of 3rd week after application closure for the Fall Semester. If more than five students are eligible, the scholarships will be awarded to the students with the five highest scores or as recommended by the SSFA Committee.
- Student should have graduated from high school within three years from joining LU
- Student should be granted full admission and have provided the equivalence of the secondary school certificate if graduating from a non-MOE program.
- Maintaining a minimum of 3.7 CGPA.
- Note: Scholarship continues in following semesters subject to specific scholarship maintenance rules. See 7

# University Scholarships

- Eligibility: Students who are UAE residents and have good scores in the high-school certificate, as per the table below.
- Amount: Varies per score achieved as shown below.
- Eligibility: Students who are UAE residents and have good scores in the high-school certificate, as per the table below.

Amount: Varies per score achieved as shown below.

| High School Score<br>See note | Other Programs | EMC /RC<br>Programs | Additional Criteria |
|---|---|---|---|
| >= %95 | 50 % | %25 | Maintain 3.5CGPA |
| >=%90 to < %95 | 30 % | %15 | Maintain 3.2 CGPA |
| >=%85 to < %90 | 20 % | 10 % | Maintain 3.0 CGPA |
| >=%80 to < %85 | 15 % | %5 | Maintain 3.0  CGPA |

Note: Scholarship continues in following semesters subject to specific scholarship maintenance rules. See (Ongoing scholarship maintenance)

## Honor Scholarships

- Eligibility: Students who have achieved 3.5 CGPA.
- Maintaining a minimum of 3.5 CGPA.
- Amount: %10.
- Note: Applies in the semester following CGPA achievement.
- Note: Scholarship continues in following semesters subject to specific scholarship maintenance rules.(Ongoing scholarship maintenance)

## Student Relatives Scholarships

- Eligibility: New & current students with first degree relative(s) studying at the University.
  - Amount: %10 for the first 3 and %15 for 4 and above.
  - Students benefitting from this scholarships need to be simultaneously registered or in case of graduation of one and should have a minimum GPA of 3.0; otherwise, scholarship will be deactivated.
- Note: Scholarship continues in following semesters subject to specific scholarship maintenance rules. See(Ongoing scholarship maintenance)

## Social Responsibility Scholarships

- Eligibility: Students with valid government Person of Determination card and who has been accepted through the LU POD committee
- Amount: %25.
- Notes: Award confirmed after admissions committee considers application.
- Maintenance rules (Ongoing scholarship maintenance) are not applicable in this scholarship category.

## Employees Scholarships

- Eligibility: University employees or first degree relatives.
- Amount: Employees %50; first-degree relatives %30.
- Notes: HR to sign off applications; only applies while in post.
- Maintenance rules (Ongoing scholarship maintenance) are not applicable in this scholarship category.

## Strategic Partnerships Scholarships

- Eligibility: Students associated with organizations with an approved Agreement/Memorandum of Understanding (MoU) with the University
- Amount: As specified in the Agreement/MoU.
- Notes: As specified in the Agreement/MoU.

## Postgraduate Scholarships:

**LU graduates:**

- Eligibility: LU graduates
- Amount: %20
- Maintaining a CGPA of 3.0

**Non-LU graduates:**

- • Eligibility: Non-LU graduates with CGPA of 3.5
- • Amount: %20
- • Maintaining a CGPA of 3.0
- Eligibility: Non-LU graduates with CGPA of 3.0
- Amount: %10

Maintaining a CGPA of 3.0

9. University scholarships are administered by the Student Scholarships & Financial Aid Office (SSFAO), working with the Financial Aid Committee (FAC) and Finance, Student Affairs, Marketing, Student Admission and Registration.

# Personal Safety & Security

1. The aim of this Policy is to provide a safe and secure environment on University premises; to ensure necessary measures to prevent and minimize the occurrence of violence and/or physical harm; to provide access to assistance and recourse when required; and to ensure proper investigation and action to prevent future recurrence. By means of this Policy, the University complies with the standards and legislation related to the Private Security Business Department (PSBD), Abu Dhabi Police and Abu Dhabi Public Health Centre (ADPHC), formerly Abu Dhabi Occupational Safety & Health (ADOSH)
2. The framework to ensure a safe and secure environment for University stakeholders includes:
    - Prevention of unauthorized access to minimize injury and other physical abuse to all stakeholders, including 7/24 availability of security personnel on University campuses.
    - Proper records of all access to University campuses by students, staff, and visitors (including vehicle registration) and issue of access passes to visitors.
    - Integration of security considerations in all aspects of University operations.
    - Deployment of security personnel at access points to the male and female sections of the University campus, to ensure access only by authorized persons.
    - Routine random security patrols of all floors of all University campuses.
    - Integration of security measures with procedures for emergency evacuation and drills.
    - Appointing an Emergency Response Team (ERT) members consist of different employees that are trained to assist and to lead the University response to incidents.
3. The framework also allocates certain responsibilities to specific University postholders:
    - Director of Finance & Administration (DoFA) will:
        - Receive reports of violent incidents involving intruders.
        - Ensure proper monitoring of security arrangements.
    - Facility & HSE Coordinator or HSE Engineerwill:
        - Record and document incidents of violence.
        - Conduct necessary risk assessment as required to identify possibility of violence and trends in the University community.
        - Investigate incidents of violence when required by management.
        - Report each semester on incidents managed under this Policy.
    - Security Team will:
        - Respond to and defuse any episodes of violence reported or observed.
        - Monitor and patrol University campuses to observe any suspicious activity.
        - Act as first contact with emergency and civil services.
        - Escort maintenance/repair personnel to work location and monitor safe work conditions.
        - Report each semester on incidents managed under this Policy.
    - CCTV Operator will:
        - Oversee safe operations on campus by means of Closed-Circuit Television Cameras and report any suspicious activity to the Facility & HSE Coordinator.
        - Line Managers/Heads/Deans will:
        - Report incidents of violence among staff to the HR Department and Facility & HSE Coordinator.
        - Ensure that reported incidents of violence are investigated and disciplinary measures are taken promptly.
    - Student Affairs will:

  - Receive/record incidents of violence among students and report them to the Facility & HSE Coordinator.
- Emergency Response Team (ERT) will:
  - Respond to reported incidents of violence among students and report them to the Facility & HSE Coordinator.
- Reporting Incidents of Workplace Violence
  - Violence with imminent danger: Any member of the University community who finds or considers themselves or someone else to be in imminent danger while on University premises should call the ERT. The Facilities Coordinator will send a mass email to all the related stakeholders about the contact numbers of the below mentioned employee every start of the semester and will be included in every HSE Induction program. The ERT will call 999 depending on the severity of the risk.
  - Violent incidents/threats of violence: Any member of the University community who become involved in or witnesses a violent incident or a threat of violence or who receive a report of such an incident are required to call ERT. The ERT will call 999 depending on the severity of the risk.
  - Non-urgent threats: violence which may be physical, verbal, written or otherwise that does not present an immediate risk of physical harm, but makes the affected person(s) feel threatened or otherwise concerned for his/her safety must be reported promptly to the line manager/faculty head.
  - Responding to incidents of workplace violence: ERT members will respond to incidents of violence with imminent danger taking the following precautions:
- Approaching the scene calmly and without showing any form of aggression (physically, verbally).
- Attempting to calm the situation while waiting for backup/external authorities.
- Ensuring to keep a safe distance and to clear the area.

4. All reports and forms related to this Policy will be kept by the Facility & HSE Coordinator. It should be noted that:
   - All incidents of violence will be recorded and documented in the accident and incident form/register.
   - Medical reports from the incident if it results in injury will be documented.
   - Police reports will be documented if the incident escalates to external authorities.
5. The following forms are used for HSE and security purposes:

| HSE and Security Forms & Documents | |
|---|---|
| Exit Material Request Form | Risk Assessment Form |
| Material Return Form | Vehicle Registration Form |
| Security Patrolling Report | PSBD Licenses for Security Personnel |
| General Safety Inspection Report | Key Borrowing Form |
| Visitor's Log & Access Card Registration Form | |
| Contractor's Log & Access Card Registration Form | |

# Facilities

1. The University is an academic community committed to the educational and personal growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the achievement of a knowledge-based economy. In furtherance of this commitment, the University focuses on international best practice and invests in people and technology. This Policy sets out the framework within which the BSF will provide and manage University facilities.
2. The mission of the BSF is to provide a safe, clean, attractive, and comfortable physical environment for all users of University facilities and grounds, through achieving and maintaining high standards of quality in the following functions[1]:

| | |
|---|---|
| Cleaning services | Access control |
| Waste management | Space management |
| Facility maintenance | Central Stores |
| Painting | Utilities |
| Landscape maintenance | Mail services |

## Cleaning services

3. BSF aims to ensure the health and safety of University students, faculty and staff and will ensure that cleaning is carried out in a safe manner. Specifically:
    - All cleaning operatives will be trained to a level appropriate to their activity; with training recorded; training requirements continuously monitored; and a continuous training program.
    - All cleaning operatives will receive training on infection prevention/control.
    - All cleaning operatives will be instructed in the requirements of University policies and of federal statute/regulation and adhere to them.
    - All cleaning operatives will be provided with appropriate personal protection equipment (PPE) and instructed how to use it.
    - Correct uniform will be issued, worn and laundered as per relevant policy.
    - Cleaning equipment standards will be followed, to ensure it is safe to use and appropriate for the job; and safety checks of all equipment (including electrical equipment) will be performed daily by operatives and supervisors.
    - Cleaning schedules will be used throughout the University, reviewed frequently, and followed by relevant staff.
    - Minimum cleaning frequencies will be set according to local needs.
    - Waste will be segregated and removed from University premises as per the Health & Safety Policy.

## Waste Management

4. The University is committed to protecting the environment through effective handling and processing of waste and will therefore engage an appropriate outsource partner as its recyclable waste handler, and aim to:
    - Implement a sustainable production and consumption approach to waste management.
    - Capitalize on economic benefits, including the revenue that can be gained from maximizing the resource potential of waste.

[1] Services may be provided in-house or via outsource agreements with independent providers.

- Maximize opportunities for the University in reuse, remanufacturing, and reprocessing.
- Minimize waste generation and the hazardous nature of certain wastes; and
- Protect and promote public health and safety.

## Facility Maintenance

5. BSF aims to ensure that the University campus is maintained in a manner providing a safe, reliable and secure environment, compliant with current regulations, as far as is reasonably practicable. BSF is responsible for providing routine, planned and preventative maintenance of electrical, plumbing, carpentry and other regular maintenance on the University campus(es), that aims to:
    - Provide a built environment that is fit for purpose and effectively supports University plans.
    - Ensure the University obtains a cost effective and professional maintenance service, which makes best use of the available funding.
    - Protect the asset value of University premises by optimizing the life of components, consistent with intended use.
    - Minimize the risk of unforeseen major defects that might adversely affect the core business of the University.
    - Establish robust planning processes to prioritize maintenance and enable the University to anticipate future maintenance expenditure costs.
    - Ensure that, as far as reasonably practicable, maintenance projects are coordinated with other construction works to minimize their impact.
    - Ensure that the built-estate of the University complies with relevant legislation and that all maintenance work is undertaken in a safe manner.

## Painting

6. In the best interest of the University, all painting will be evaluated and/or completed by BSF, on a cyclical basis. Bonded/licensed contractors may be retained and will be supervised by BSF. Requests for painting will be placed on the schedule according to the discretion of BSF, and must be submitted to and approved by the Facility & HSE Coordinator . Each request is evaluated against the condition of the rest of the campus before painting commences to make sure that areas in poor condition take precedence. Where a painting request falls outside normal maintenance cycles, it may be charged to the requesting department. Wall finishes other than paint also require review and approval by BSF Department.

## Landscape maintenance

7. BSF will use appropriate environment-friendly technologies for strategically placing plant material for best water, energy, and erosion management, using a diverse palette of native horticulture.
8. In planning and carrying out campus landscaping, BSF will:
    - Remove invasive exotic plants from University grounds and optimize the use of native plants.
    - Strategically place plants in appropriate locations and capitalize on the energy efficiency of plants as shade and wind breaks.
    - Landscape responsibly, so as to help cultivate an ecologically based sense-of-place in the larger community.
    - Move toward enhancing biological diversity through the wise use of flora.
    - Minimize the use of petroleum inputs and eliminate toxins to the extent possible to maintain campus grounds.

- Strive to maximize energy efficiency and water quality benefits of landscaping.
- Develop aesthetically pleasing landscapes (with a variety of flowering plants, colors, textures, fragrances, etc.) and help change the urban aesthetic by considering ecological principles and costs.
- Boost ecological complexity by increasing biological diversity.
- Serve as a model landscape for other campuses and the larger community.
- Serve as a catalyst for environmental action on campus as an early phase of campus sustainability efforts.
- Encourage cooperation with local plant nurseries and landscape professionals.

## Access control

9. It is University policy to safeguard persons and property by controlling access to University buildings and ensure that only authorized users of a space have access to it. Compliance with access controls will assist in making the University a safe and secure space, help reduce locksmith workload, and improve service levels. BSFis responsible for managing locksmith services provided to the University by independent service suppliers. Service agreements will provide for maintenance of University access control systems and hardware including:
    - Cutting and issuing keys.
    - Re-keying locks.
    - Installing and repairing locks and access control hardware.
    - Installing and repairing door hardware.
    - Providing advice on selection of appropriate access control hardware.

## Space management

10. BSF will undertake space management functions on University campus(es) by:
    - Maintaining a system wide inventory of University space.
    - Working with University to meet space needs in a fully cooperative manner.
    - Providing building and floor plan drawings that depict square meterage, departmental assignments, space use, and other information.
    - Performing space analyses, tests and planning-driven "what if" scenarios in line with University guidelines.
    - Supporting University strategic planning initiatives (educational, financial, and physical) from the perspective of space needs and use.
    - Assisting groups involved in capital projects and major relocations.
    - Developing/updating space classification codes in line with government and University guidelines to support indirect cost recovery negotiations.

## Mail service

11. The University has designated BSF as the responsible unit for gathering, sorting, and delivering all University mail, including: periodical and standard bulk mail:
    - Incoming mail: collecting/delivering interdepartmental campus mail and mail from external postal and courier services.
    - Outgoing mail: collecting departmental mail, affixing postage and passing to the postal service.

12. The following points should be noted:
    - Campus mail is for University business **only** and is **not** to be used for personal or political business.
    - Mail submitted to BSF for postage without a return address (or with a personal return address) will be considered personal mail and therefore not eligible for

University metering or University-paid postage.

- Mail is delivered to the department addressed which is responsible for providing the forwarding address of a transferred or departed employee.
- BSF department does not hold mail. Mail received prior to the start date of any new staff member must be held by that person's department and passed to the new staff member on arrival.
- Interdepartmental mail is delivered once a day, and any mail collected on the daily route will be delivered on the next business day.
- Postage metering equipment must not be purchased by departments.

## Central Stores

13. The University has a Central Stores section which stocks/supplies items that are frequently purchased, in a manner that is usually faster and more cost-effective than via individual purchases. BSF operates the Central Stores, including:
    - Distribution of general office supplies.
    - Delivery services for all goods received and general office supplies.
    - Photocopier maintenance and replacement of toner cartridges.
    - Equipment maintenance for office furniture.
    - Equipment maintenance for students and staff furniture.
    - Regular maintenance and inventory of Central Stores stock.
14. Before ordering from another source, departments must check if the item is available in Central Stores. If the items are in stock, they must be ordered from Central Stores, using a requisition submitted to the Purchasing section for approval and (once approved) forwarded to Central Stores for processing. All requisitions will be filled on the day received and delivered on the next business day. Requisitions will be sent for payment processing when items are delivered. Items not in stock will be ordered and delivered upon receipt of goods.
15. BSF also undertakes the regular maintenance of all University office furniture and photocopiers and checks/replaces empty toner cartridges. New cartridges are obtained from Central Stores.

## Utilities

16. BSF is responsible for managing service agreements with independent service providers for operation/maintenance of utilities (e.g. water, electricity and air conditioning), on the University campus(es) and in student and staff housing owned/operated by the University. For utility-related works BSF will:
    - Conduct initial feasibility investigation and provide indicative cost estimates for purchase and installation.
    - Facilitate detailed investigation and design work.
    - Advise anticipated annual operating costs and electricity charges.
    - Obtain any necessary statutory approvals.
    - Where appropriate, prepare tender documentation, invite/receive tenders, and arrange installation contracts.
    - Supervise all installation works, including ancillary building operations and other upgrading work.
    - Manage servicing and maintenance of installed systems by independent service providers.

# Blended Learning

1. The University is an academic community committed to the educational and personal

growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the UAE Vision of a knowledge-based economy. The University promotes ethical behavior and international best practice, and invests in people and technology. This Policy sets out how the University will ensure that online and blended teaching & learning (BTL) are delivered and supported to achieve the same high quality of content and outcomes as face-to-face learning, and in compliance with the requirements of the UAE and MoE as set out in Annex 15 of the CAA *Standards for Institutional Licensure and Program Accreditation (Dec 2019)*.

2. The University has adopted the following definition of blended learning:
   *Blended learning is the thoughtful integration of classroom face-to-face and asynchronous/synchronous video conferences with online learning experiences through modern learning management technology that enables learners to collaborate, discuss, and get instant or faculty-provided feedback.*

3. The University strategy is to provide high-quality programs delivered through blended teaching and learning (BTL), which is a hybrid model in which education is delivered using face-to-face and blended methods. This Policy therefore:
   - Sets the framework for University to ensure that BTL is delivered and supported to achieve high quality of content and outcomes.
   - Provides general guidelines for BTL-related processes, including material preparation and delivery, assessment and examination, and feedback collection (see Appendix 1).
   - Describes out the responsibilities of administrative departments for BTL delivery (see Appendix 2).

4. The University will appoint a BTL Coordinator to facilitate the implementation of blended teaching and learning, whose teaching load is reduced by 3 hours per week to allow for the performance of the following:
   - Guiding/supporting academic staff to develop LMS content for BTL using the University template.
   - Conducting training to upscale academic staff skills for BTL.
   - Identifying/recommending appropriate tools for developing content suitable for BTL, monitoring the use of such tools, and providing the VPAA with statistics on progress in content development.
   - Suggesting/taking actions to meet goals of the BTL strategy and ensuring its implementation through this Policy and the Blended Learning Manual.

5. The University is committed to the allocation of sufficient resources to achieve the short- and long-term goals of the Blended Learning Strategy, and ensures that forecasting and budgeting processes incorporate:
   - Provision of centralized computing, networking equipment and software to ensure a stable and robust computing environment for all BTL activities.
   - Resources for student/staff training in BTL technical equipment; for pedagogical training for academic staff (on topics such as instructional design, best practice in technology, course material development, etc.); for involvement of external graphic designers, multimedia specialists, programmers, etc. if appropriate; and for periodic measures to support BTL, e.g. workload reduction for BTL development projects).

6. Under this Policy, responsibility for oversight of the University delivery of high-quality BTL rests with the Vice-President of Academic Affairs (VPAA) and is exercised through deans, department heads, academic staff and relevant administrative staff. Planning, implementation, evaluation and continuous improvement of BTL practices involves

University committees, particularly the Academic Council (which is chaired by the VPAA). Achievement of BTL strategy is part of the University strategic and operational planning cycles, with goals and KPIs as integral parts of annual faculty goal-setting, evaluation and continuous improvement processes.

7. The VPAA oversees the continuous evaluation of BTL through the semester-based course review and annual program evaluation processes (which apply to all programs/courses, regardless of delivery mode), which assess achievement of learning outcomes, retention rates, graduation rates, etc., and include feedback from students and other stakeholders The University expects that BTL and face-to-face courses and programs will produce the same learning outcomes as comparable courses and programs. the results of these processes are used for continuous improvement measures; to enhance the student educational experience; and to accommodate and adapting to the dynamic nature and changing landscape of the online learning environment.
8. All University academic policies apply to BTL delivery. The Student Attendance Policy is applied to BTL delivery as follows:
    - Students must connect at the start of the session, and remain connected and actively engaged/participating for a minimum of 75% of the session duration.
    - If prevented by technical difficulties or other exceptional circumstances, a student must email the course instructor (with explanation and evidence) no later than 24 hours after the session.
9. Under this Policy, faculty members are responsible for day-to-day BTL delivery, ensuring the quality of instruction, rigor of course curricula, and appropriate evaluation of student success in achieving course/program learning outcomes. Academic staff evaluations (annually and for promotion) include an assessment of performance in the BTL environment. As part of their responsibilities, academic staff must:
    - Maintain regular virtual office hours every week for student consultations.
    - Ensure full alignment and equal rigor between courses delivered face-to-face and via BTL (including scheduling, contact time per week, weeks of instruction per semester, and all aspects of number, scheduling, administration, and invigilation of quizzes/examinations).
10. Student support services for BTL courses/programs are key to the success of this mode of delivery and requirements for academic advising and personal support apply equally to courses/programs delivered face-to-face and via BTL. The University therefore ensures guidance, training and tutorials, online resource access, communication, technological assistance for technological aspects, in addition to academic and personal support provided through an online platform for traditional academic study skills guidance; for assistance with developing effective online study skills; and for campus life functions and services (including Personal counseling, career advising, employer workshops, student governance, clubs and activities, student wellness, sports development, and fitness). Support for BTL delivery of courses/programs is also provided by administrative departments including Student Affairs department (SA), Information Technology department (IT), Learning Resources Center (LRC), Finance department, as described in Appendix 2.

## Appendix 1

## General Guidelines for Blended Teaching & Learning (BTL)

Blended learning sessions are conducted 'live' with interactivity between all learners

and academic staff members.

**1 Content preparation**

- Define the strategies you will use to attain the course learning outcomes using the digital tools available.
- Decide on the type/level of interactivity needed.
- Select appropriate media carefully: slides, short video, text, voice, simulation, etc.
- Make sure the selected channel/support is appropriate to the level of outcome, and nature of course material that is supported on the digital tools available.
- Ensure that the learning material covers all the learning outcomes of the course.
- Ensure that students registered in courses such as internships, graduation projects, and field study are provided with required forms and documents in digital form.

**2 Session delivery**

- Define strategies for keeping students engaged throughout the session.
- State session objective and process recall.
- Interact and regularly engage students using defined strategies, e.g. quizzes, direct questions, flipped classroom, voting etc.
- End the session by summarizing the main points and introducing the next session highlights.

**3 After delivery of sessions**

- Make a list of areas to revise and/or improve for the next session.
- Collect student feedback and use it to revise/improve delivery mode, content, personalization and engagement.
- Analyze statistics e.g. number of attendees, number of interactions by attendees, number of answered/non-answered questions, and use this to revise and/or improve.
- Academic staff and HoD are responsible for maintaining statistics on BTL delivery, and attendance, and for collecting student and academic staff feedback.

**4 Examination and assessment**

The University uses blended teaching and learning (BTL) with examinations conducted in person on campus. Faculty councils will determine the assessments for each BTL program. Grades and exams are subject to the usual relevant University rules and regulations.

If a course is delivered fully online, the following methods will be used:

- Online time-controlled quizzes, multiple choice and open-ended questions, conducted in a specific session and for a specific limited duration. To ensure security, answers are collected through a specific platform and are kept as exam records by the department/staff (unless specified differently by relevant policy/procedure).
- Online group work, discussions, and assignments leading to the submission of a group report, which is part of coursework assessment. The reports/assignments submitted are subject to policies/procedures described in the Academic Integrity Policy and Anti-Plagiarism Guidelines.
- Individual or group projects, assignments, and other tasks to be submitted at a specific date via the appropriate platform.

- On-line presentations.
- Final exams and midterm exams **which will be face-to-face in University campus.**
- Simulations, practical, recorded experiments, experiment results/records, and/or results presentations (only for practical components and specific courses, as approved by department councils).
- Ensure that assessments cover the learning outcomes of the courses adequately in the manner described in the syllabus and guided by assessment moderation guidelines.
- Ensure that students registered in courses such as internship, graduation projects, and field study are submitting reports through the appropriate platform following guidelines associated with such courses, and the camera is on for presentation and such sessions are recorded.

## 5 Student awareness and support

- New student orientation must include how-to guidance on using BTL technical tools.
- Students must be provided with all relevant technical support (see 6 below).
- Academic advisors must meet students (see Academic Advising Policy) and identify any needs relating to ICT skills for BTL, sharing information with the technical support team, LRC, Student Affairs etc. so that training can be provided.
- Administrative departments (e.g. Student Affairs, Admission, Registration, Finance) must provide appropriate technical channels to communicate with students and receive feedback.

## 6 Technical, resources and administrative support

- The Information Technology department (IT)
    - Provides technical resources for BTL delivery/assessment and monitors their use.
    - Responds to helpdesk requests to identify and resolve technical issues.
    - Provides staff/student training in technical resources.
    - Ensures integrity and confidentiality of data in the BTL platform (student, course, analytical, etc.) and takes necessary action to prevent data security breaches.
- The Learning Resource Center (LRC):
    - Coordinates with academic departments to determine BTL resource requirements for each semester.
    - Liaises with publishers to provide appropriate e-resources and printed resources.

- Provides student/staff training on the use of LRC e-learning resources.

- The Finance department:
  - Ensures University approval of revenue and expenses budget for BTL delivery (including hardware, software and human resources required) based on projected student numbers.

Full details of support department responsibilities in respect of courses/programs delivered in BTL mode are provided in Appendix 2.

## Appendix 2

## Support for Blended Teaching & Learning (BTL)

### 1 The Student Affairs Department (SAD) is responsible for:

- Involving all students (registered on face-to-face and BTL programs/courses) in the full program of student activities conducted on- and off-campus, including in student clubs, in academic and sports competitions, in cultural activities, etc.
- Making available to all students (registered on face-to-face and BTL programs/courses) a program of career development activities, e.g. career development workshops, career fairs, etc.
- Providing personal advisory/counselling services to all students (registered on face-to-face and BTL programs/courses).

### 2 The Information Technology department (ITD) is responsible for:

- Providing the University platform for BTL delivery and monitoring, with all applicable licenses obtained and up-to-date, and accessible by all students and staff on campus and remotely (up to the point of the home port).
- Arranging clear and easily accessible instructions on digital tools (including MS Teams, Blackboard Learn and program-specific tools) for all students and staff, with how-to guidance in various formats (e.g. presentation, video, process manual, etc.).
- Providing face-to-face or remote training sessions for students and staff based on need and request.
- Arranging University email addresses/IDs for all users of digital tools.
- Providing hotline and user support for BTL sessions through appropriate channels (e.g. email, ticketing system, WhatsApp, telephone, etc.).
- Maintaining statistics on helpdesk requests and using them to compile a FAQ list.
- Providing full-time staff with appropriate devices equipped with the digital tools required for BTL sessions.
- Providing software and parametrization support for part-time academic staff to prepare their equipment for BTL delivery in line with the University requirements.
- Applying appropriate security measures to protect the integrity and confidentiality of data in the e-learning platform (relating to students, courses, analytics, etc.).
- Implementing all University backup policies for software, data, and other electronically stored information to ensure rapid and complete restoration of service to users with a minimum of disruption, in the event of a service interruption.

**3 The Learning Resource Center (LRC) is responsible for:**

- Supporting BTL delivery by providing remote access to databases, e-books, and electronic journals, and reference services for students and staff.
- Coordinating with academic departments to identify resources required for BTL courses/programs and liaising appropriately with publishers for their supply.
- Conducting training sessions to familiarize students and staff with e-resources.

**4 The Finance department is responsible for:**

- Preparing forecasted revenue and projected expenditure for face-to-face and BTL programs in line with University policies.
- Maintaining records related to actual expenses at University, campus, department, and program levels in appropriate formats, regularly and when required by the University, for internal and/or external audits, and external regulatory bodies.

# No Smoking

1. The University is an academic community committed to the educational and personal growth of its students, and to its core functions of teaching & learning, research and community engagement, towards the UAE Vision of a knowledge-based economy. In furtherance of this commitment, the University focuses on integrity, ethical behavior and international best practice, and invests in people and technology. This Policy sets out how the University will:
   - Provide a healthy working environment, maintain good indoor air quality and protect the current and future health of staff, students and visitors.
   - Uphold the right of non-smokers to breathe in air free from tobacco smoke.
   - Comply with the health & safety legislation and employment laws of the UAE.
   - Raise awareness of the dangers associated with exposure to tobacco smoke.
   - Take account of the needs of those who smoke and support those who wish to stop.
2. Under this Policy, the smoking of tobacco products (including personal vaporizers, e-cigarettes, etc.) is not permitted at any time in any premises or facilities owned and/or managed by the University; in public, shared or individual spaces or building entrances; in University vehicles or any other vehicles being used on University business; or by any person in such spaces, regardless of their status or business in the University. Smoking is **only** permitted in areas designated for the purpose.
3. To ensure full compliance with this Policy:
   - "No Smoking" signs[2] will be posted at all entrances and other appropriate locations.
   - All visitors, contractors and suppliers will be informed by Security staff of the requirement to abide by the No Smoking Policy. Staff and students may also approach anyone who is smoking and inform them politely of this Policy. [3]
   - Smoking will **only** be permitted in designated and clearly signposted areas.
   - During pre-employment processes candidates will be notified of the No Smoking Policy and, where relevant, new staff will be signposted to support services for advice on smoking cessation. Selection of candidates will not discriminate against those who smoke.

[2] It should be noted that this Policy applies even where "No Smoking" signs are not displayed.

[3] This provision requires **only** providing information on the Policy and it does **not** include entering into a confrontation or putting personal safety at risk.

- The No Smoking Policy will be included in the staff and student handbooks and codes of conduct; information will also be provided in induction and orientation activities and in relevant University publications.
- Staff/students should report any instance of smoking in a prohibited area to the Health & Safety Officer or Security or HR Department or Student Affairs.

4. Breaches of this Policy by students or staff will be subject to disciplinary action in accordance with relevant University policy.

# GENERAL EDUCATION

جامعة ليوا
Liwa University

## General Education

The General Education offers a wide range of courses, covering essential subjects such as information technology, mathematics, English and Arabic languages, Islamic culture, and both natural and social sciences. It is staffed by highly qualified instructors with extensive academic experience, particularly in the General Information field. This solid foundation of knowledge equips students with the essential skills and understanding needed to pursue specialized studies in their chosen fields after completing the foundational courses.

# HOD Message

I encourage my colleagues to enhance their teaching practices by adopting modern approaches and utilizing the latest academic resources in delivering foundational knowledge across subjects such as computer skills, innovation, mathematics, languages, humanities, and natural sciences. It's also important to integrate sustainability concepts into all courses and to foster interactive discussions that strengthen students' skills acrossvarious disciplines. Building a strong foundation in these areas empowers our students tosucceed in their future fields of specialization, enabling them to effectively contribute to the UAE and Arab region's workforce and support ongoing development initiatives.

At Liwa University, our General and Foundation Departments offer courses that explore key historical, economic, and political milestones in the UAE from the union's formation to the present. These courses also cover essential topics like human rights, national identity, and the UAE's accomplishments in space exploration and sustainable energy. Moreover, they highlight exemplary models of tolerance and coexistence that are deeplyrooted in the UAE's societal values.

**Dr. Tamara Al Shloul**

## List of General Education Courses

| Course Code | Course Name | Credit Hours | Prerequisite |
|---|---|---|---|
| MTH110 | Calculus I | 3 | None |
| GEN302 | Fundamentals of Innovation, Entrepreneurship and Sustainability | 3 | ENG 100 |
| GEN105A | ثقافة المجتمع الإماراتي | 3 | None |
| GEN105 | Emirates Culture and Society | 3 | None |
| GEN103 | Critical Thinking | 3 | ENG 100 |
| GEN102A | الثقافة الإسلامية | 3 | None |
| GEN102 | Islamic Culture | 3 | None |
| GEN101 | الطلاب(مهارات الاتصال باللغة العربية غير العرب) | 3 | None |
| GEN100 | الطلاب(مهارات الاتصال باللغة العربية العرب) | 3 | None |
| GEN304A | الأخلاقيات | 3 | None |
| GEN304 | Ethics | 3 | ENG 200 |
| GEN201 | Psychology | 3 | ENG 100 |
| ENG104 | English 2 | 3 | English1/ENG100 |
| ENG100 | English 1 | 3 | One of the English proficiency Tests (Emst, IELTS,TOEFL etc.) |
| CIT101 | Introduction to Artificial Intelligence | 3 | None |

College of
Business

# College of Business

The College of Business develops effective and responsible leaders by providing insightfulknowledge and inspiring minds in dialogue with the world around us. We deliver a broadspectrum of in-demand and competitive career-oriented programs, embracing all the major fields in Business Administration.

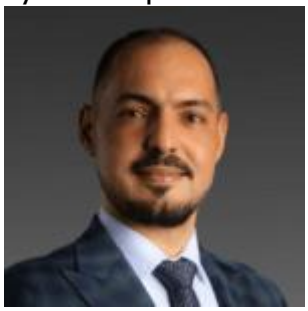

# Dean's Message

Welcome to the College of Business at Liwa University (LU). As we celebrate our 32nd anniversary in 2025, we take pride in our journey since welcoming our very first cohort of students. Over the years, we have remained steadfast in our mission and make meaningful contributions to the business world and society at large. Whether you aspire to become a business leader, entrepreneur, or dedicated professional, you'll find that our college is committed to equipping you with the knowledge, skills, and values to thrive in an ever-evolving global economy. The dynamic global market, diverse society, and rapid technological advances are driving demand for skilled, analytical professionals. Our student-centred undergraduate programs offer experiential learning that fosters problem-solving, innovation, and a strong sense of ethics and social responsibility.

We offer a wide range of in-demand undergraduate and graduate programs in key business fields, including Management, Accounting, Finance, HR, Digital Marketing, E- Commerce, and more. Our internationally recruited faculty bring global expertise, combining academic excellence with real-world experience through engaging coursework,projects, and internships.

The College of Business holds prestigious accreditations from ACBSP (2028), CILT (2027),SHRM (2029), and is in the final stage of AACSB accreditation—ensuring a competitive edge for our students and faculty.

I warmly invite you to visit our campus and experience firsthand how joining the Liwa University (LU) community can empower you to grow, innovate, and reach your full potential.

**Dr. Anas Al-Qudah**
Dean, College of Business

| **Program Title:** | **Bachelor of Business Administration in Accounting** |
| **Credit Hours:** | 123 |
| **Award Granted on Completion:** | Bachelor of Business Administration in Accounting |
| **Delivery Mode:** | Face-To-Face |
| **Local Accreditation Status:** | Commission for Academic Accreditation, UAE (CAA) |
| **International Accreditation Status:** | Accreditation Council for Business Schools and Programs, USA(ACBSP) ,<br>Chartered Institute of Logistics and Transport (CILT), UK |
| **Language of Study:** | English |
| **Duration:** | 4 Years |
| **Campus:** | Abu Dhabi |
| **Faculty Info:** | College of Business Administration |
| **Head of Department:** | Dr. Milica Dakovic Tadic |

## About the Program

The Bachelor of Business Administration in Accounting will provide you with a thorough understanding of the fundamental principles and theories of accounting. In addition, it will teach you how to apply theory into practice, successfully and ethically, in all kinds oforganizations.

## Objectives

- Instill the motivation and desire to follow sound judgment, both personally andprofessionally.
- Provide the capabilities for critical thinking, creative problem-solving, and innovative decision-making in an organizational setting.
- Improve the ability to utilize management science techniques to resolve complexbusiness problems.
- Promote an understanding of the relationships between different business functions in the overall management of an organization.
- Enable the development of effective team-building skills.
- Provide the knowledge to guide an organization during periods of change.
- Prepare students for leadership positions in multicultural organizations.

## Learning Outcomes

- Think critically, solve problems creatively, and make innovative decisions in an organizational setting.
- Gain the knowledge and skills to diagnose accounting errors and problems.
- Learn about the theory, practice, and framework of generally accepted accounting principles.
- Critically evaluate the impact of accounting models, concepts, and theories in dynamic business environments.
- Analyze and develop models to evaluate an organization's performance.
- Undertake critical analyses to develop plans and implement strategic decisions based on accounting data.

## Career Opportunities

After completing the Bachelor of Business Administration in Accounting, numerous careeropportunities are available to you. Here are some of the positions previous graduates ofthe program have secured.

- Accounting Clerk
- Senior Accountant
- Managerial Accountant
- Internal Auditor
- External Auditor Assistant

## About the Program

The BBA in Business Information Technology will provide a solid foundation in Information Technology (IT) principles and practices. The emphasis is on the applications of Information Technology rather than the computer itself.

You will gain an understanding of web and application development in the context of thebusiness environment and capabilities in systems analysis and design, database management, and IT project management. The program also includes general business subjects, with business topics integrated into information systems courses.

## Objectives

- Instill the motivation and desire to follow sound judgment, both personally andprofessionally.
- Provide the capabilities for critical thinking, creative problem-solving, and innovative decision-making in an organizational setting.
- Improve the ability to utilize management science techniques to resolve complexbusiness problems.
- Promote an understanding of the relationships between different business functions in the overall management of an organization.
- Enable the development of effective team-building skills.
- Provide the knowledge to guide an organization during periods of change.
- Prepare students for leadership positions in multicultural organizations.

## Learning Outcomes

- Apply the use of emerging technologies to the business environment.
- Utilize information technology skills and tools to support decision-making inbusiness.
- Understand and use basic information technology tools and techniques to buildbusiness information systems.
- Solve business problems and enhance productivity using information technologytools and techniques effectively.
- Use knowledge of information systems to formulate, solve, and discuss businessproblems that require analysis.
- Understand and apply the fundamental knowledge and skills required to manageE-business systems and their environment.
- Assess and select business intelligence models most appropriate to a givensituation.

## Career Opportunities

After completing the BBA in Business Information Technology, numerous career opportunities are available to you. Here are some of the positions previous graduates ofthe program have secured.

- Business Intelligence Manager
- Client Services Analyst
- Database Administrator
- Database Analyst
- Information Resource Manager
- IT Consultant
- Programmer
- Project Manager
- Quality Assurance Analyst
- Systems Analyst
- Application Developer
- Application Support
- Business Analyst
- User Support Analyst
- Web Developer
- Web Page Designer
- Webmaster

## About the Program

The BBA in Industrial Management, certified by CILT International, equips you with the competencies and knowledge to understand and implement business concepts that optimize and manage production and other business processes. By incorporating principles of manufacturing systems, logistics and supply chain management, and total quality management, you'll learn how to plan the efficient and economical use of resources in any business.

## Objectives

- Instill the motivation and desire to follow sound judgment, both personally andprofessionally.
- Provide the capabilities for critical thinking, creative problem-solving, and innovative decision-making in an organizational setting.
- Improve the ability to utilize management science techniques to resolve complex business problems.
- Promote an understanding of the relationships between different business functions in the overall management of an organization.
- Enable the development of effective team-building skills.
- Provide the knowledge to guide an organization during periods of change.
- Prepare students for leadership positions in multicultural organizations.

## Learning Outcomes

- Use quality core concepts and tools to design methodologies to implement TotalQuality Management.
- Plan and monitor the implementation of various production and maintenanceoperations in projects and organizations.
- Acquire core knowledge about Supply Chain Management and logistics.
- Use quantitative tools to formulate and solve production problems to supportdecision making.
- Apply Lean Management and Six Sigma concepts and tools for sustaining continuous improvement in organizations.
- Apply critical thinking skills and scientific techniques to conduct industrial management research projects.

## Career Opportunities

After completing the BBA in Industrial Management, numerous career opportunities are available to you. Here are some of the positions previous graduates of the program have secured.

- Process Manager
- Operations Manager
- Quality/Reliability Manager
- Production Manager
- Project Manager
- Supply Chain Manager

## About the Program

The Bachelor of Business Administration (BBA) in Digital Marketing is a comprehensive program designed to equip students with the knowledge, skills, and practical expertise required to thrive in the dynamic and ever-evolving digital marketing landscape. This program integrates digital marketing concepts, analytical tools, and strategic thinking toprepare students for successful careers in the digital marketplace.

Students will develop proficiency in using advanced digital marketing analytics tools to collect, analyze, and interpret data. They will learn digital marketing principles and frameworks, enabling them to develop effective online strategies that align with business objectives and sustainability goals. The program emphasizes the integration of theoretical knowledge with practical application. Students will engage in real-world projects, case studies, and collaborative teamwork to solve complex marketing challenges.

## Objectives

- Within the students the motivation and desire to follow sound moral judgment in personal and professional roles.
- Strengthen the business judgment of graduates by providing a capability for critical thinking, creative problem-solving, and innovative decision-making processes in an organizational setting.
- Improve the students' abilities to utilize management science techniques to resolve complex business problems.
- Promote in students an understanding of the relationships among business functions and their respective roles in the overall management of the firm.
- Strengthen the students' abilities and skills to work effectively in teams.
- Equip the students with the knowledge to guide their organization during periods of change.
- Prepare the graduates to assume leadership positions in organizations, both locally and in multicultural organizations.

## Learning Outcomes

- Explain digital marketing concepts to develop effective online strategies that meet business and sustainability goals.
- Apply digital marketing analytics tools to gather and analyse data for developing marketing strategies.
- Analyse consumer-related insights and social media metrics to develop effective marketing strategies in a digital marketplace.
- Combine theoretical understanding and practical skills, showcasing problem-solving, teamwork, and professional communication in a digital marketplace.

## Career Opportunities

After completing the BBA in Digital Marketing can pursue a wide range of exciting and high-demand career opportunities in the digital economy. With expertise in digital marketing strategies, analytics, consumer insights, and practical application, numerous career opportunities are available to you. Here are some of the positions previous graduates of the program have secured.

- Content Marketing Manager
- Digital Advertising Specialist
- Digital Marketing Analyst
- Digital Marketing Consultant
- Digital Marketing Specialist

## About the Program

The BBA in Banking and Finance with a Concentration in FinTech is designed to equip students with the knowledge and skills to navigate the evolving landscape of financial technology. Through a multidisciplinary approach, the program integrates core finance principles with cutting-edge advancements in blockchain, digital payments, artificial intelligence, and big data analytics. Students develop critical thinking and analytical abilities to assess financial innovations, optimize digital transactions, and implement technology-driven financial solutions. The curriculum fosters an entrepreneurial and innovative mindset, preparing graduates to lead digital transformation initiatives in banking, investment, and financial services. With a strong focus on regulatory compliance, cybersecurity, and ethical financial practices, students learn to develop secure and efficient financial systems while ensuring compliance with global financial regulations.

## Objectives

- Equip students with a strong foundation in financial technology, including blockchain, big data, and digital currencies, to prepare them for careers in the evolving FinTech sector.
- Enable students to apply financial theories, data-driven models, and analytical tools to assess opportunities and risks in FinTech services and digital finance.
- Encourage students to explore innovative financial solutions, entrepreneurial finance, and emerging business models in the FinTech ecosystem.
- Ensure students understand legal, ethical, and cybersecurity considerations in FinTech, emphasizing data integrity, consumer protection, and regulatory frameworks.
- Provide practical experience through internships and projects, bridging academic learning with real-world FinTech applications in banking, financial markets, and digital finance solutions.

## Learning Outcomes

- Explain the theory, practice, and emerging trends of FinTech concepts, ideas, and frameworks.
- Develop the knowledge and decision-making skills for effectively addressing challenges and opportunities in FinTech services.
- Implement predictive models for FinTech decision-making within an organization.
- Comply with ethical and legal standards to protect data security, integrity, and confidentiality in developing and delivering FinTech applications.

## Career Opportunities

Graduates of the Bachelor of Business Administration in Banking and Finance with aconcentration in FinTech can pursue careers in areas such as digital banking, blockchain, financial data analysis, risk management, and cybersecurity.

Below are some of the roles previously secured by program alumni:

- Blockchain Specialist
- Cybersecurity Specialist – Financial Sector
- Digital Banker
- Digital Investment Manager
- Digital Payments Specialist
- Financial Data Analyst
- Financial Innovation Specialist
- Financial Regulatory Analyst/Specialist
- FinTech Analyst
- Regulatory Compliance Manager
- Risk Manager
- Startup Founder/Employee in FinTech

## About the Program

The Master of Business Administration (MBA) program is designed to equip professionalswith the expertise to navigate complex business challenges and drive strategic growth. Through an interdisciplinary approach, students develop critical thinking and problem- solving skills to analyze business data, formulate strategic solutions, and make informeddecisions that align with organizational objectives. The program fosters leadership abilities by preparing graduates to effectively manage diverse teams, implement changeinitiatives, and lead innovation in dynamic business environments. With a strong emphasis on ethical decision-making and sustainability, the MBA curriculum ensures thatstudents integrate corporate social responsibility principles into business practices while adhering to professional and regulatory standards.

## Objectives

- Equip students with advanced leadership and management capabilities to effectively lead organizations, make strategic decisions, and foster innovation in dynamic business environments.
- Prepare students to navigate and excel in a globalized economy by providing insights into international business practices, cross-cultural communication, and global market trends.
- Instil a strong foundation of ethical decision-making and sustainability principles, enabling graduates to contribute responsibly to their organizations and society.
- Offer a transformative learning experience that combines rigorous academic training with practical, hands-on opportunities to enhance employability, entrepreneurship, and continuous career growth.

## Learning Outcomes

- Demonstrate the ability to analyze complex business challenges, formulate strategic solutions, and make data-driven decisions to achieve organizational objectives.
- Exhibit effective leadership skills and the ability to collaborate within diverse teamsto manage and drive organizational change and innovation.
- Apply ethical principles and sustainability practices to business decision-making, ensuring positive contributions to society and adherence to professional standards.
- Analyze and address global business opportunities and challenges with an understanding of diverse cultural, economic, and regulatory environments.
- Integrate advanced analytical tools and emerging business technologies to

optimize organizational processes, enhance decision-making, and drive competitive advantage in dynamic markets.

## Career Opportunities

After completing the Master of Business Administration (MBA) program, numerous career opportunities are available to you in various sectors, including finance, consulting, marketing, operations, and technology management. Here are some of the positions thegraduates of the program would secure.

- Business Consultant
- Chief Executive Officer (CEO)
- Financial Analyst
- Marketing Director
- Operations Manager
- Other strategic leadership roles

## Program Curriculum

### Obligatory Courses (27 Credit Hours)

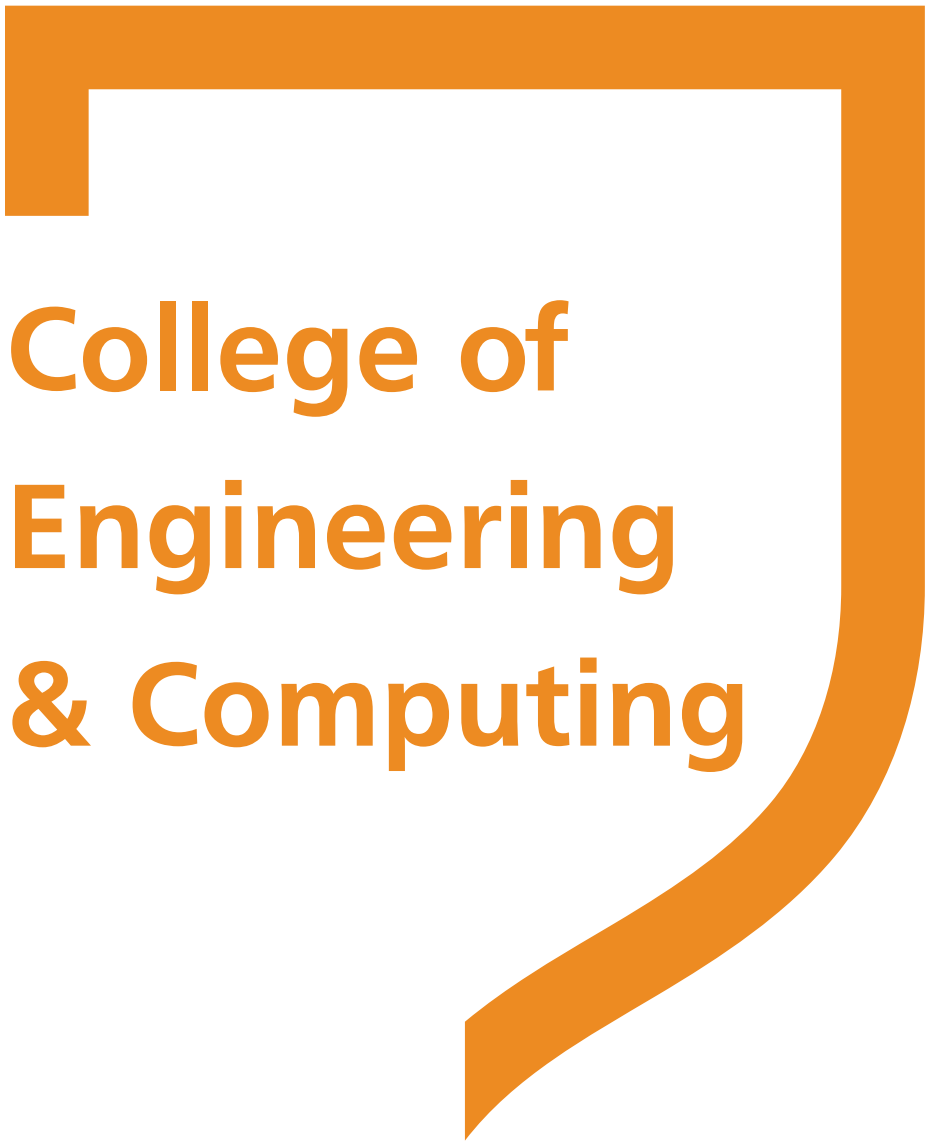

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| MBA 501 | Sustainability, Innovation, and Entrepreneurship | 3 | NA |
| MBA 502 | Applied Corporate Finance | 3 | NA |
| MBA 503 | Advanced Managerial Accounting | 3 | NA |
| MBA 601 | Leadership and Organizational Behavior | 3 | NA |
| MBA 602 | International Business Management | 3 | NA |
| MBA 603 | International Strategic Management | 3 | MBA 602 |
| MBA 604 | Operation and Supply Chain Management | 3 | NA |
| MBA 605 | Research Method in Business | 3 | MBA 601 |
| MBA 607 | Thesis | 3 | MBA 605 |

### Elective courses (3 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| MBA 504 | Project Management | 3 | NA |
| MBA 506 | Information Technology Strategy and Management | 3 | NA |
| MBA 606 | Marketing Management in the Digital Era | 3 | NA |

## Study Plans

College of
Engineering
& Computing

# College of Engineering and Computing

The College of Engineering and Computing provides students with the hard technical skills and soft practical skills necessary for successful careers in the world of Engineering, Information Technology and related industries. Our mission is to prepare students for a lifetime of learning and successful careers in different engineering fields, locally and internationally. We are committed to inspiring our students to be future leaders and problem solvers in the important field of engineering. Through our multi-faceted approach, our students gain the core competencies, knowledge, and skills needed to behighly competent engineering and IT professionals, prepared for entry-level positions in specific engineering and IT disciplines, further graduate studies, life-long learning, and leadership.

All the programs offered by the College of Engineering and Computing are accredited bythe Commission of Academic Accreditation (CAA), Ministry of Higher Education and Scientific Research, UAE. This guarantees they meet the highest standards of quality andthat students who graduate from them are well-prepared for the workforce locally, regionally, and internationally. The programs provide an excellent amalgamation of classical foundational courses and advanced contemporary courses in Engineering and Information Technology.

Our faculty members and staff are highly qualified professionals with vast experience in the field. They are committed to teaching students the latest technologies and helping them develop the skills they need to succeed. Our faculty members are highly engaged in scientific research projects that reflect positively on their teaching performance. The industrial experience they have is propagated to the students to help them be prepared for emerging market needs. We have state-of-the-art labs that are equipped with the latest software and hardware. This allows students to learn and practice with the same technologies used in the industry.

Student clubs provide opportunities to get involved in activities and competitions, whichwill further develop their skills, build networks with other students, and gain experience

in the field. The activities are closely connected with local businesses and industries.Students are exposed to the latest trends in the industry and market projections.

# Dean's Message

**Dear Students,**

**Welcome to the College of Engineering and Computing!**

It is my pleasure to extend a warm welcome to all students at the College of Engineering and Computing. I am thrilled to have you as part of the vibrant and innovative community at Liwa University. Our faculty stands as one of the most distinguished faculties in this institution, following the recent merger of the Colleges of Engineering and Information Technology. This unification was designed to promote collaboration, create synergy between both colleges, and enhance resource-sharing efficiency, ultimately driving betterresults.

Our college is proud to be at the forefront of advancing knowledge, inspiring innovation,and shaping future leaders in engineering and computing. This mission is driven by our dedicated students, expert faculty, and skilled staff, all supported by our strategic locationin the dynamic center of Abu Dhabi.

To our students, I encourage you to take full advantage of the resources available, collaborate with your peers and professors, and immerse yourself in the unique experiences our university offers. Doing so will help us navigate and invest in the futureeffectively. Remember, you are the driving force behind this institution—your passion, creativity, and dedication are what propel us forward. Challenge yourselves and aim for excellence in everything you do. We are here to support you at every step of your academic journey.

**Dear Faculty and Staff,**

Thank you for your unwavering commitment to our students and to the pursuit of knowledge. Your expertise and dedication will position this college as a leader in engineering and computing education. I look forward to a year filled with collaboration and innovation as we work together to shape the future of these fields. As we move forward, let us remain focused on our mission to educate, innovate, and inspire. Together, we will continue to build a community that excels not only in knowledgebut also in integrity, diversity, and compassion.

Once again, welcome to the College of Engineering and Computing. I am eager to seethe great things we will accomplish this year.

**Prof. Raed Abdallah Abu Zitar**

Dean, College of Engineering and Computing

| **Program Title:** | **Bachelor of Science in Mechanical Engineering** |
| **Credit Hours:** | 133 |
| **Award Granted on Completion:** | Bachelor of Science in Mechanical Engineering |
| **Delivery Mode:** | Face-To-Face |
| **Local Accreditation Status:** | Commission for Academic Accreditation, UAE (CAA) |
| **Language of Study:** | English |
| **Duration:** | 4 Years |
| **Campus:** | Abu Dhabi |
| **Faculty Info:** | College of Engineering and Computing |
| **Head of Department:** | Dr. Mahmoud Mistarihi |

## About the Program

The Bachelor of Science in Mechanical Engineering focuses on designing and manufacturing systems involving energy generation, conversion, transmission, and utilization. It will provide you with knowledge and skills in multiple disciplines, including systems analysis and design, dynamics, engineering materials, thermos and fluid dynamics, heat transfer, mechanical vibrations, and control. Well-equipped laboratories in energy transfer, robotics and control, and computer-aided engineering will support your studies.

## Program Education Objectives

- The Program Educational Objectives (PEOs) of the BSME program are to producegraduates who will:
- Possess the appropriate competencies in the field of mechanical engineering, a capability for critical thinking, creative problem solving, and innovative decision-making processes
- Promote awareness of concepts, tools, and methodologies relevant to the field ofmechanical engineering based on a sense of community service, teamwork, responsibility, and strong ethics.
- Develop a professional approach related to mechanical engineering projects.
- Serve in mechanical engineering positions in private and public organizations.

## Student Outcomes

1. An ability to identify, formulate, and solve complex mechanical engineering problemsby applying principles of engineering, science, and mathematics.
2. An ability to apply mechanical engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

6. An ability to develop and conduct appropriate experimentation, analyze, and interpretdata, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learningstrategies.

## Career Opportunities

After completing the Bachelor of Science in Mechanical Engineering, numerous career opportunities are available to you. Here are some of the positions previous graduates ofthe program have secured.

- Design Engineer
- Mechanical Maintenance Engineer
- Smart Manufacturing Engineer
- Robotics/Mechatronics Engineer

## Program Curriculum

### General Requirements (33 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | None |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |

## About the Program

The Bachelor of Science in Industrial Engineering is concerned with designing, developing, installing, and operating integrated systems of people, materials, information,equipment, and energy. Drawing upon specific knowledge and skills in mathematics, physics, social sciences, and engineering, the program will prepare you to optimize complex processes and systems, saving time, money, materials, and energy across various industries.

## Program Education Objectives

- The Program Educational Objectives (PEOs) of the BSIE program are to produce graduates who will:
- Possess the appropriate competencies in the field of industrial engineering, a capability for critical thinking, creative problem solving, and innovative decision-making processes
- Promote awareness of concepts, tools, and methodologies relevant to the field ofindustrial engineering based on a sense of community service, teamwork, responsibility, and strong ethics.
- Develop a professional approach related to industrial engineering projects.
- Serve in industrial engineering positions in private and public organizations.

## Student Outcomes

1. An ability to identify, formulate, and solve complex industrial engineering problems by applying principles of engineering, science, and mathematics.

2. An ability to apply industrial engineering design to produce solutions that meetspecified needs with consideration of public health, safety, and welfare, as well asglobal, cultural, social, environmental, and economic factors.

3. An ability to communicate effectively with a range of audiences.

4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plantasks, and meet objectives.

6. An ability to develop and conduct appropriate experimentation, analyze, and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

## Career Opportunities

After completing the Bachelor of Science in Industrial Engineering, numerous career opportunities are available to you. Here are some of the positions previous graduates ofthe program have secured.

- Design Engineer
- Maintenance Engineer
- Operations/Systems Engineer
- Engineering Manager
- Supply Chain Manager

| Program Title: | Bachelor of Information Technology (BIT)—GeneralTrack |
|---|---|
| Credit Hours: | 123 |
| Award Granted on Completion: | Bachelor of Information Technology (BIT)—General Track |
| Delivery Mode: | Face-To-Face |
| Local Accreditation Status: | Commission for Academic Accreditation, UAE (CAA) |
| Language of Study: | English |
| Duration: | 4 Years |
| Campus: | Abu Dhabi, Al Ain |
| Faculty Info: | College of Engineering and Computing |
| Head of Department: | Dr. Samar Mouti |

**Note:** Students already enrolled in the previous Bachelor of Information Technology (BIT) program can access their curriculum and study plan by clicking here for more information.

## About the Program

The Bachelor of Information Technology (BIT) program is designed to equip students with comprehensive knowledge and skills in various domains of IT, including Artificial Intelligence, Cloud Computing, Networks, and General IT. The program integrates theoretical foundations with practical applications, ensuring that graduates are well-prepared for careers in information technology, artificial intelligence, cloud computing, software development, data science, and network security. With a total of 123 credit hours, students undergo rigorous training in programming, database systems, networking, artificial intelligence, cloud computing, and software development. The program also includes an internship and a senior graduation project to enhance hands-on learning, industry exposure, and real-world problem-solving skills.

### Objectives

- **The Program Educational Objectives (PEOs) for the BIT program are to produce graduates who will:**
- Possess an understanding of the underlying concepts, foundations, and theory ofcomputer-based and distributed information systems.
- Exhibit the knowledge, skills, and abilities necessary for the investigation, analysis,design, and development of large-scale software systems that meet business requirements.
- Stay current with leading-edge developments in the industry through professionaldevelopment, and/or further studies.
- Be able to consolidate the knowledge and skills they have learned and employ them in real life situations.
- Have successful careers in the areas of information technology, data science, mobile application development, artificial intelligence, network management, or software development.

## Student Outcomes

- Analyze a complex computing problem and apply principles of computing and otherrelevant disciplines to identify solutions.
- Design, implement, and evaluate a computer-based solution to meet a given setof computing requirements in the context of the program's discipline.
- Communicate effectively in a variety of professional contexts.

- Recognize professional responsibilities and make informed judgments incomputing practice based on legal and ethical principles.
- Function effectively as a member or a leader of a team engaged in activitiesappropriate to the program's discipline.
- Use systemic approaches to select, develop, apply, integrate, and administersecure computing technologies to accomplish user goals.

## Career Opportunities

After completing the Bachelor of Information Technology (BIT) — General Track, numerous career opportunities are available to you. Here are some of the positions previous graduates of the program have secured.

- Data Analyst
- Business Intelligence Analyst
- Data Scientist
- Mobile Application Developer
- AI Programmer
- Machine Learning Developer
- System Analyst
- Software Developer/Manager
- User Experience Designer
- Database Analyst/Developer/Administrator
- IT Project Manager
- Information System Manager
- Computer and Information Security Specialist/Manager
- Security Analyst
- Penetration Tester
- Network Administrator/Manager
- Web Developer

## Program Curriculum

| Types of Courses | No. of Courses | Credit hours |
|---|---|---|
| General Education | 11 | 33 |
| Core Courses | 20 | 60 |
| Internship | 1 | 3 |
| Senior Graduation Projects | 2 | 6 |
| Electives Courses | 2 | 6 |
| General Track Courses | 5 | 15 |
| **TOTAL** | **41** | **123** |

## General Requirements (33 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | 80% in English subject in H.S or equivalent) |
| GEN100/GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG 104 | English II | 3 | ENG100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG100 |
| GEN 201 | Psychology | 3 | ENG100 |
| GEN 302 | Fundamentals of Innovation and Entrepreneurship | 3 | ENG100 |
| GEN 304 | Ethics | 3 | ENG100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

## Core Requirements (69 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT112 | Introduction to Computer Programming | 3 | None |
| CIT121 | Introduction to Computer Architecture | 3 | None |
| CIT122 | Introduction to Database Management Systems | 3 | CIT112 |
| CIT123 | Computer Programming & Problem Solving | 3 | CIT112 |
| CIT231 | Introduction to Computer Networks | 3 | CIT121 |
| CIT232 | Introduction to Operating Systems | 3 | CIT121 |
| CIT241 | Network Security | 3 | CIT231 |
| CIT242 | System Analysis and Design | 3 | CIT122 |

## About the Program

The Bachelor of Information Technology (BIT) program is designed to equip students with comprehensive knowledge and skills in various domains of IT, including Artificial Intelligence, Cloud Computing, Networks, and General IT. The program integrates theoretical foundations with practical applications, ensuring that graduates are well-prepared for careers in information technology, artificial intelligence, cloud computing, software development, data science, and network security. With a total of 123 credit hours, students undergo rigorous training in programming, database systems, networking, artificial intelligence, cloud computing, and software development. The program also includes an internship and a senior graduation project to enhance hands-on learning, industry exposure, and real-world problem-solving skills.

## Objectives

- **The Program Educational Objectives (PEOs) for the BIT program are to produce graduates who will:**
- Possess an understanding of the underlying concepts, foundations, and theory ofcomputer-based and distributed information systems.
- Exhibit the knowledge, skills, and abilities necessary for the investigation, analysis,design, and development of large-scale software systems that meet business requirements.
- Stay current with leading-edge developments in the industry through professionaldevelopment, and/or further studies.
- Be able to consolidate the knowledge and skills they have learned and employ them in real life situations.
- Have successful careers in the areas of information technology, data science, mobile application development, artificial intelligence, network management, or software development.

## Student Outcomes

- Analyze a complex computing problem and apply principles of computing and otherrelevant disciplines to identify solutions.
- Design, implement, and evaluate a computer-based solution to meet a given setof computing requirements in the context of the program's discipline.

- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
- Function effectively as a member or a leader of a team engaged in activities appropriate to the program's discipline.
- Use systemic approaches to select, develop, apply, integrate, and administer secure computing technologies to accomplish user goals.
- Effectively apply principles of artificial intelligence (AI) to design, develop, and evaluate intelligent systems that solve complex, real-world problems across diverse domains.

## Career Opportunities

After completing the Bachelor of Information Technology (BIT)—Artificial Intelligence Concentration, numerous career opportunities are available to you. Here are some of thepositions previous graduates of the program have secured.

- AI Consultant
- AI Research Scientist
- Artificial Intelligence Engineer
- Computer Vision Engineer
- Data Analyst
- Data Scientist
- Machine Learning Engineer
- Natural Language Processing (NLP) Engineer
- Robotics Engineer
- Software Developer

## About the Program

The Bachelor of Information Technology (BIT) program is designed to equip students with comprehensive knowledge and skills in various domains of IT, including Artificial Intelligence, Cloud Computing, Networks, and General IT. The program integrates theoretical foundations with practical applications, ensuring that graduates are well-prepared for careers in information technology, artificial intelligence, cloud computing, software development, data science, and network security. With a total of 123 credit hours, students undergo rigorous training in programming, database systems, networking, artificial intelligence, cloud computing, and software development. The program also includes an internship and a senior graduation project to enhance hands-on learning, industry exposure, and real-world problem-solving skills.

## Objectives

- **The Program Educational Objectives (PEOs) for the BIT program are to produce graduates who will:**
- Possess an understanding of the underlying concepts, foundations, and theory ofcomputer-based and distributed information systems.
- Exhibit the knowledge, skills, and abilities necessary for the investigation, analysis,design, and development of large-scale software systems that meet business requirements.
- Stay current with leading-edge developments in the industry through professionaldevelopment, and/or further studies.
- Be able to consolidate the knowledge and skills they have learned and employ them in real life situations.
- Have successful careers in the areas of information technology, data science, mobile application development, artificial intelligence, network management, or software development.

## Student Outcomes

- Analyze a complex computing problem and apply principles of computing and otherrelevant disciplines to identify solutions.
- Design, implement, and evaluate a computer-based solution to meet a given setof computing requirements in the context of the program's discipline.

- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
- Function effectively as a member or a leader of a team engaged in activities appropriate to the program's discipline.
- Use systemic approaches to select, develop, apply, integrate, and administer secure computing technologies to accomplish user goals.
- Design, deploy, and manage scalable, secure, and efficient network and cloud computing solutions to address organizational and technological needs, while ensuring compliance with industry standards and best practices.

## Career Opportunities

After completing the Bachelor of Information Technology (BIT)—Networks and Cloud Computing Concentration, numerous career opportunities are available to you. Here aresome of the positions previous graduates of the program have secured.

- Cloud Administrator
- Cloud Engineer
- Cybersecurity Analyst
- IT Consultant
- Network Administrator
- Network Engineer
- Network Security Specialist
- System Administrator
- Virtualization Engineer
- Wireless Network Engineer

## Program Curriculum

| Types of Courses | No. of Courses | Credit hours |
|---|---|---|
| General Education | 11 | 33 |
| Core Courses | 20 | 60 |
| Internship | 1 | 3 |
| Senior Graduation Projects | 2 | 6 |
| Electives Courses | 2 | 6 |
| Concentration Courses | 5 | 15 |
| **TOTAL** | **41** | **123** |

### General Requirements (33 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |

| | | | |
|---|---|---|---|
| ENG 100 | English I | 3 | 80% in English subject in H.S or equivalent) |
| GEN100/GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG 104 | English II | 3 | ENG100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG100 |
| GEN 201 | Psychology | 3 | ENG100 |
| GEN 302 | Fundamentals of Innovation and Entrepreneurship | 3 | ENG100 |
| GEN 304 | Ethics | 3 | ENG100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

## Core Requirements (69 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT112 | Introduction to Computer Programming | 3 | None |
| CIT121 | Introduction to Computer Architecture | 3 | None |
| CIT122 | Introduction to Database Management Systems | 3 | CIT112 |
| CIT123 | Computer Programming & Problem Solving | 3 | CIT112 |
| CIT231 | Introduction to Computer Networks | 3 | CIT121 |
| CIT232 | Introduction to Operating Systems | 3 | CIT121 |
| CIT241 | Network Security | 3 | CIT231 |
| CIT242 | System Analysis and Design | 3 | CIT122 |
| CIT244 | Database Systems | 3 | CIT122 |
| BIT203 | Management Information Systems | 3 | CIT100 |
| CIT234 | Discrete Mathematics | 3 | MTH105 |
| CIT353 | Web Development | 3 | CIT123 |
| CIT354 | Object-Oriented Programming | 3 | CIT123 |
| BUS407 | Project Management | 3 | BIT203 |
| CIT362 | Information Security Management | 3 | CIT241 |
| BIM200 | Linear Algebra | 3 | MTH105 |
| CIT483 | Internship | 3 | 75 credits |
| CIT472 | User Interface Design | 3 | CIT354 |
| MTH110 | Calculus-I | 3 | None |
| CIT478 | Mobile Applications Development | 3 | CIT472 |
| CIT473 | Introduction to Artificial Intelligence | 3 | 48 credits |
| CIT484 | Senior Graduation Project I | 3 | 90 credits |
| CIT485 | Senior Graduation Project II | 3 | CIT484 |

### Elective Courses (6 Credits)

| Course Code | Course Title | Credit Hours | Prerequisite | Restrictions |
|---|---|---|---|---|
| CIT352 | Distributed Information Management | 3 | CIT231 | For AI and Network concentrations only |
| CIT481 | Contemporary Issues in IT | 3 | 81 credits | For AI and Network concentrations only |
| CIT474 | Internet of Things | 3 | CIT231 and Completion of 81 credits | For general track and AI concentrations only |
| CIT487 | Cloud and Edge Computing | 3 | CIT231 and Completion of 81 credits | For general track and AI concentrations only |
| CIT477 | Natural Language Processing | 3 | CIT473 and Completion of 81 credits | For general track and Network concentrations only |
| CIT470 | Data Mining | 3 | CIT473 and Completion of 81 credits | For general track and Network concentrations only |

### Networks and Cloud Computing Concentration(15 Credit Hours)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT474 | Internet of Things | 3 | CIT231 and Completion of 81 credits |
| CIT486 | Network Protocols | 3 | CIT231 and Completion of 81 credits |
| CIT487 | Cloud and Edge Computing | 3 | CIT231 and Completion of 81 credits |
| CIT488 | Network Virtualization | 3 | CIT231 and Completion of 81 credits |
| CIT489 | Advance Network Security | 3 | CIT241 and Completion of 81 credits |

## About the Program

The Bachelor of Science in Data Science and Artificial Intelligence Engineering (BSDSAI_ENGG) is designed to equip students with a solid foundation of in-depth knowledge and advanced practical skills in data science, Artificial Intelligence (AI), and engineering concepts. The program focuses on empowering students to develop intelligent systems, make data-driven decisions, and create innovative AI solutions across various sectors. With a total of 133 credit hours, the program offers comprehensive academic and hands-on training in programming, data analytics, machine learning, deeplearning, data engineering, and AI ethics. Students gain real-world experience using thelatest tools and technologies applied in modern AI and data science applications. The curriculum includes university, core, and specialized courses, in addition to a practical training period and a design project, ensuring that graduates are well-prepared for careers in AI engineering, data science, software development, intelligent systems, and emerging technologies—through a balanced integration of academic knowledge and practical experience.

## Objectives

- Equip students with a comprehensive foundation in Data Science, Artificial Intelligence, and core engineering principles.
- Develop graduates who can apply analytical and AI-driven methods to real-worldproblems across various sectors.
- Promote ethical, sustainable, and responsible use of AI technologies in alignmentwith global and UAE-specific standards.
- Enable innovation and research in AI and data science tailored to UAE.
- Foster leadership, teamwork, and communication skills for interdisciplinary collaboration.

## Student Outcomes

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
- An ability to communicate effectively with a range of audiences.

- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- An ability to function effectively on a team whose members together provide leadership, create a collaborative environment, establish goals, plan tasks, and meet objectives.
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.
- An ability to apply theory, techniques, and tools throughout the data science lifecycle and employ the resulting knowledge to satisfy stakeholders' needs.

### Career Opportunities

Graduates from the Data Science and AI Engineering program can pursue various jobopportunities, including:

- AI Research Scientist
- AI Solutions Architect
- Business Intelligence Analyst
- Data Engineer
- Data Scientist
- Machine Learning Engineer

## Program Curriculum

## About the Program

The Diploma of Information Technology program at Liwa University is accredited by theCommission of Academic Accreditation (CAA), Ministry of Education, UAE. This program provides a comprehensive education in computer science and information technology. Itaims to equip students with the technical and practical skills necessary to design, develop, and implement software solutions and manage information systems and technology projects. The program offers in-depth knowledge of IT concepts and covers topics such as computer programming, system design, network administration, and database management. The graduates of this program are working successfully in several government and private organizations in the UAE and abroad.

## Program Education Objectives

- Demonstrate foundational knowledge of computer-based and distributedinformation systems.
- Apply technical skills to analyze, design, and develop software systems that meetbusiness needs.
- Pursue lifelong learning and adapt to emerging industry trends and furtherstudies.
- Translate knowledge into practice through real-world applications and projects.
- Begin successful careers in IT roles such as systems analyst, developer, projectmanager, or network/security specialist.

**Student Outcomes – General**

- Explain the characteristics of the hardware and software components of computer systems and networks and discuss the relative merits of alternativedesigns.
- Design, implement and test computer programs to meet specified requirementsusing industry-standard development tools.
- Design and develop database applications to meet the requirements of the usersof a business system.
- Design and develop web-based computer systems that incorporate multimediadata.
- Explain the concepts of software project management and use support tools toplan and manage projects.
- Use modern object-oriented techniques effectively in the design anddevelopment of computer software systems.
- Work effectively as part of a software development team using appropriatesoftware development methodologies.
- Design computer network systems to meet the needs of the business.
- Manage and maintain computer network systems and use appropriate

securitymeasures.

**Student Outcomes – General Education**

- Communicate effectively in English both orally and in writing.
- Use standard IT packages effectively to support business-related activities.
- Analyze problems and design appropriate solutions.
- Work effectively as part of a team.

## Career Opportunities

After completing the Diploma of Information Technology, numerous career opportunities are available to you. Here are some of the positions previous Diplomaholders of the program have secured.

- IT Support Specialist.
- Network Technician.
- Junior Software Developer.
- Database Assistant.
- System Administrator Assistant.
- Cybersecurity Assistant.
- Technical Sales Representative.

## Program Curriculum

**General Requirements (21 Credit Hours)**

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | None | 3 |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | TOEFL or IELTS or EmSAT |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |

## About the Program

The Diploma in Computer Graphics & Animation program at Liwa University is accredited by the Commission of Academic Accreditation (CAA), Ministry of Education, UAE. The mission of the program is to maintain a high-quality study plan that delivers state-of-the-art knowledge and skills in graphics design and 3D animation. Also, emphasize excellence in teaching, community service, and partnership with industry. The program enables students to achieve excellence in digital graphics design, 3D animation, and motion arts to graduate qualified professionals in this field to compete and satisfy labor market needs. The graduates of this program are working successfullyin several government and private organizations in the UAE and abroad.

## Program Education Objectives

- Introduce students to the professional world of graphics and animation, trainingthem to become professionals in the field.
- Prepare students a knowledgeable skill in professionals process in GraphicDesign, Page Layout Design, and Interactive 3D Animation.
- Developing the skills in market fields of graphics design & advertisements, 2D &3D Animation and multimedia, along with creative and artistic communication skills.
- Provide the graduating students with the opportunity to bring together and applytheir educational experience in the CGA program, through work placement.
- Provide the student with an opportunity to apply knowledge and skills obtainedin the classroom to real life situations.

### Core Student Outcomes

- Demonstrate and understanding of the production pipeline and processappropriate to the field of computer graphics and animation.
- Demonstrate and understanding of the underpinning principles of 2D graphicimages, 3D graphics, modelling, texturing, and shading.
- Apply knowledge and acquire skills to solve Computer graphics and animationproblems.
- Use relevant software tools to create and manipulate graphic images, animations, webpages, 3D. models in multiple formats, video editing and specialeffects.
- Work individually and as part of a team in the context of an

understanding ofsocio-cultural relationships and ethical standards.

- Identify learning needs and plan own learning in an independent manner.

## Career Opportunities

After completing the Diploma in Computer Graphics & Animation, numerous careeropportunities are available to you. Here are some of the fields in which previous Diploma holders of the program have started their careers.

- Advertising
- Print and Publishing
- Magazines and Newspapers
- Design Centers
- Exhibitions and Displays
- TV and Broadcasting
- Media and Video Production
- Animation Studios and Gaming
- Internal Design
- Architecture
- Entertainment
- Education
- Government
- Self-employed/Freelance

## Program Curriculum

### General Requirements (24 Credit Hours)

| Course Code | Course Title | Prerequisite | Credit Hours |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | NONE | 3 |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG100 | English I | TOEFL or IELTS or EmSAT | 3 |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | None | 3 |
| GEN102 | Islamic Culture (A/E) | None | 3 |
| GEN105 | Emirates Culture and Society | None | 3 |
| GEN201 | Psychology | ENG100 | 3 |
| GEN302 | Fundamentals of Innovation and Entrepreneurship | ENG100 | 3 |
| GEN304 | Ethics | ENG100 | 3 |

### Core Requirements (45 Credit Hours)

| Course Code | Course Title | Prerequisite | Credit Hours |

College of
Medical &
Health
Sciences

# College of Medical and Health Sciences

The College of Medical and Health Sciences (CMHS) is committed to preparing professional and competent healthcare professionals. Our programs are structured to provide students with a range of knowledge, skills, and competencies that will equip themto meet the requirements of the healthcare sector in the UAE. Graduates will be preparedto enter the healthcare profession and be eligible for licensure, certification, and advancededucation.

The College of Medical and Health Sciences offers diverse academic opportunities. We are proud of our established academic reputation and the quality of our programs delivered to international standards. Through our experienced faculty members, all experts in their respective fields, we deliver a wide range of degree programs in medicaland health sciences with a variety of specializations. This allows students to pursue theirspecific interests and career goals in health care. With an emphasis on hands-on learning experiences, internships, clinical practicums, and research opportunities, our students areable to apply their knowledge and practical skills to real-life scenarios and enhance theirindustry experience.

The College of Medical and Health Sciences houses state-of-the-art facilities, including laboratories, research centers, and simulation environments. You will have access to cutting-edge technologies and resources to enhance your learning and research skills. Working with colleagues from different healthcare disciplines will teach you a multidisciplinary approach to problem-solving and prepare you for collaborative healthcare practices.

Our faculty members are involved in research and innovation in various areas of the healthcare sector. This means you will be able to participate in research projects, work with faculty members on groundbreaking research initiatives, and contribute to advancesin healthcare knowledge and practice. In addition, you will get the opportunity to network with healthcare professionals through events, conferences, and guest lectures, expand your professional network, gain insight into current healthcare trends, and enhance yourcareer prospects.

In addition, our career services will support you in your transition from the academic to the professional world. These services include career counseling, resume writing assistance, interview preparation, and job placement assistance. Through our active engagement with the community through outreach programs, health promotion campaigns, and partnerships with health organizations, you will get the opportunity to contribute to the community's well-being, participate in volunteer activities, and positivelyimpact public health.

# Dean's Message

I am privileged to welcome you to the College of Medical and Health Sciences. Everyonein the College – students, faculty members, and staff – share a common vision to improvethe health and well-being of everyone in the communities in which we operate.Please take some time to explore our diverse educational programs we offer: seven bachelor's degrees and four diploma level programs. All the clinical programs are taughtas coordinated training programs in association with healthcare settings, with mandatory clinical rotations. We partner with several local, national, and international organizationsto facilitate our students' clinical and academic growth. The highlight of our programs includes well-established laboratories, simulation rooms, interdisciplinary research activities, and integrated learning experiences. The result is graduates who can quickly adapt to the dynamic needs of the healthcare industry.

The healthcare profession is an exciting field, and we are determined to lead healthcareeducation and provide a learning environment that will stimulate, inspire, and nurture your academic and professional journey.

I invite you to visit our university and/or contact us for more information on any opportunity of your interest.

**Prof. Maxime Merheb**

Dean, College of Medical and Health Sciences

The College of Medical and Health Sciences offers a variety of undergraduate programs that will provide graduates with the knowledge and skills needed for a successful careerin the healthcare industry. Our programs include a Bachelor of Science in Respiratory Care, Bachelor of Science in Emergency Medical Care, Bachelor of Science in Medical Laboratory Analysis, Bachelor of Science in Medical Diagnostic Imaging, Bachelor of Health Management, and Bachelor of Applied Health Sciences in Health Information Management. We also offer Diploma in Medical Laboratory Analysis and Diploma in HealthManagement. Through these programs, we offer a comprehensive education thatcombines theoretical knowledge with hands-on training. Our faculty consists of experienced professionals who are experts in their fields and are committed to providinga quality learning experience. The programs we offer provide a strong foundation for future healthcare professionals, ensuring that, they are well-prepared to make a positiveimpact on any healthcare setting.

*(The First & Only Program in the UAE combining Health Management with Health Information Management majors, empowering Future Leaders in Healthcare Systems andDigital Health Transformation)*

## About the Program

The Bachelor of Science in Health Management and Informatics (BS-HMI) is a multidisciplinary program designed to address the evolving needs of modern healthcare systems through a blend of management, data analytics, public health, and health information technology. As the demand for data-driven decision-making and efficient healthcare delivery increases, this program equips graduates with the tools to lead and innovate across a wide range of healthcare settings.

Students will gain comprehensive knowledge in healthcare delivery systems, medical coding, health data management, strategic planning, and digital health transformation. Emphasis is placed on ethical practice, data privacy, and patient-centered care. Real- world learning is enhanced through partnerships with hospitals, health organizations, and industry experts, providing hands-on internships, career mentoring, and employment pathways.

This program prepares graduates to become integral contributors to healthcare reform, digital transformation, and administrative efficiency across both public and private healthcare sectors in the UAE and beyond.

## Health Management and Informatics professionals work with:

- Healthcare institutions to design and implement efficient management systemsthat improve patient care and operational performance.
- Medical records and clinical documentation teams to ensure accuracy, compliance,and secure handling of health information.
- Public health authorities to analyze population health data and support policy development that enhances healthcare access and outcomes.
- Insurance companies and billing departments to manage coding, reimbursement,and revenue cycle processes with precision and integrity.
- Technology providers and IT departments to support the integration of healthinformation systems, telemedicine platforms, and digital transformation

projects.

Through a combination of interdisciplinary education and real-world training, the BS-HMIprogram equips students with the expertise to optimize healthcare delivery, promote data-driven decision-making, and lead transformative initiatives across the healthcare sector.

## Objectives

- Describe the structure and function of healthcare delivery systems, including publichealth and hospital administration frameworks.
- Apply biostatistical methods to analyze healthcare data and support evidence-based decision-making.
- Demonstrate proficiency in medical terminology and apply it accurately in healthdocumentation and communication.
- Develop strategic plans for healthcare organizations, incorporating economic,financial, and operational principles.
- Interpret and apply medical coding systems and insurance protocols to ensureaccurate billing and reimbursement.
- Evaluate health policies and propose recommendations for improving healthcareaccess, equity, and outcomes.

## Learning Outcomes

- Apply core management principles to effectively lead and support operationswithin healthcare organizations.
- Utilize health information systems and medical coding standards to support decision-making and patient care documentation.
- Analyze and interpret health data using statistical tools to inform public healthstrategies and policy development.
- Demonstrate ethical and legal responsibility in the management of healthcareservices and information.
- Design and evaluate quality improvement initiatives that enhance patient safetyand healthcare delivery systems.
- Communicate effectively and collaborate with multidisciplinary teams to promoteefficient healthcare practices and patient-centered care.

## Career Opportunities

Graduates of the Bachelor of Science in Health Management and Informatics programare prepared for diverse roles across healthcare sectors, including:

## Health Information & Data Management

- Clinical Coding Specialist
- Health Information Analyst
- Health Information Manager
- HIM Director

- Information Governance and Access Specialist
- Medical Records Technician
- Privacy Officer
- Revenue Cycle Specialist

## Health Informatics & Digital Transformation

- Compliance and Risk Management Officer
- Healthcare Compliance Officer
- Health Data Analyst
- Healthcare IT Project Manager
- Health Information Technology Director
- Healthcare Project Manager

## Healthcare Management & Administration

- Hospital Administrator / Healthcare Facility Manager
- Health Operations Manager
- Medical Administrative Officer / Assistant
- Medical and Health Services Manager
- Provider Network Manager

## Finance, Strategy & Policy

- Financial Manager / Analyst in Healthcare
- Healthcare Consultant / Strategist
- Healthcare Policy Analyst
- Medical Claims and Insurance Manager
- Quality Improvement Specialist / Coordinator

## Marketing & Development

- Healthcare Marketing and Business Development Specialist

Upon completion of the program, graduates will be eligible for professional certificationsand licensure, enabling them to work in the healthcare sector both locally and internationally.

## About the Program

The Bachelor of Science in Medical Laboratory Analysis will prepare you to use up-to-dateinstruments and biochemical, microscopic, molecular, and immunological techniques to analyze blood, tissues, and other medical specimens. It will provide the in-depthknowledge and skills required in medical laboratory practice to deliver essential information about the presence, extent, or absence of molecular levels of disease to physicians and other healthcare professionals. You will also gain skills related to problem-solving, data analysis, computer skills, and oral and written communication.

The program offers clinical and lab experience as an integrated curriculum component. You will undertake a mandatory internship and lab and clinical courses to reinforce the theory.

## Program Objectives

Objective 1: Understand the components of the diagnostic process and perform diagnostic laboratory analysis in accordance with the established laboratory procedures and professional standards of practice without error of clinical significance.

Objective 2: Maintain laboratory equipment in accordance with laboratory procedures to the extent that laboratory safety and test results without error of clinical significance are assured.

Objective 3: Demonstrate professionalism reflective of the standards of practice and code of ethics which underlie the profession.

Objective 4: Demonstrate essential knowledge in inorganic chemistry, organic chemistry, biochemistry, anatomy and physiology, microbiology, immunology, andbiostatistics.

Objective 5: Perform and interpret results of clinical laboratory tests including: blood bank, urinalysis, and other body fluids, chemistry, hematology, immunology,and microbiology.

Objective 6: Demonstrate professional conduct and interpersonal skills with patients, laboratory personnel, other health care professionals and the public.

## Learning Outcomes

PLO1: Acquire and interpret knowledge to apply in the medical laboratory setting.

PLO2: Demonstrate knowledge of current technological advances and evidence- based medical laboratory best practice.

PLO3: Acquire knowledge of the principles and safety regulations of clinical laboratory instrumentation.

PLO4: Exhibit a range of technical skills to analyse clinical specimens, interpret test results, recognize, and solve errors. Demonstrate ability to propose differential diagnoses in clinical cases.

PLO5: Demonstrate skills in the use of standard and advanced medical laboratoryinstruments, information technology.

PLO6: Demonstrate skills in producing appropriate documentation including reports of diagnostic results.

PLO7: Effectively present concepts through oral and written communication skills in English and visually through illustrative and technical rendering. Investigate problems through systematic research and effectively disseminate findings.

PLO8: Work effectively as an independent as well as a contributing team memberrespectful of cultural diversity and individual differences.

PLO9: Establish safe working practices for self and others regarding equipment, handling of biological samples, reagent products, disposal of waste materials andrelevant legislation.

## Career Opportunities

After completing the Bachelor of Science in Medical Laboratory Analysis, numerous careeropportunities are available to you. Here are some of the types of organizations previousgraduates of the program have secured positions:

- Clinical Laboratories
- Hospitals
- Research Centers
- Blood Banks
- Medical Equipment Companies as Clinical Application Specialists
- Advanced Degrees, including Master of Science, Doctorate Studies, and Post-Doctoral Fellowships

## About the Program

The Bachelor of Science in Medical Diagnostic Imaging is an integrated academic and clinical program designed to prepare you to take the Medical Imaging Technologist licensing examination of the MOHAP, DHA, and DOH as per the UAE-P PQR: Healthcare Professionals Qualification Requirements after completion of the mandatory period of training.

The courses are integrated vertically and horizontally in relation to the various imaging modalities studied in the course. For example, you will study cross-sectional anatomy when learning about imaging modalities capable of generating cross-sectional images. This approach is integrated with periods of clinical placement every semester related to academic teaching activities.

## Objectives

- Provide students with the necessary clinical and didactic experience to become competent diagnostic radiographer with the required skills for producing high quality medical images.
- Develop critical, analytical problem-based learning skills with the ability to explainthe scientific basis of diagnostic radiography and will have theoretical and practical knowledge about different medical imaging modalities, such as computed tomography, magnetic resonance imaging, and nuclear medicine.
- Prepare graduates who understand the ethics and regulations of the radiographycareer and know the principles of health organizations and society.
- Prepare graduates with the ability to provide professional patient care and the ability to show personal and professional development.
- Provide students with the skills required to protect patients, themselves, and others from unnecessary radiation exposure.
- Providing the students with both academic and practical content in sufficient details to ensure that, on graduation, they are competent to work as diagnostic technologists within a healthcare team.

## Program Learning Outcomes

- After completing this program, students should be able to:
- Demonstrate a broad and coherent knowledge of the fundamental scientific and functional principles of all modalities associated with medical imaging including X-ray, Computed Tomography (CT), Magnetic Resonance Imaging (MRI), Ultrasound, Angiography, Mammography and other emerging / hybrid modalities.
- Demonstrate an understanding of the concepts of the interactions of ionizing radiation with matter and describe the instruments used to detect ionizing radiation and their appropriate selection in addition to understanding the hazardsof ionizing radiations.
- Demonstrate a deep understanding of the radiographic cross-sectional anatomy and optimal imaging strategies for human structures and pathologies.
- Describe and demonstrate ability to implement the following: digital image processing techniques and applications: enhancement; segmentation; quantification; registration; medically relevant illustrative, image compression, investigative and imitative visualization technique.
- Apply knowledge of the anatomy, physiology, pathology of body systems to the role of medical imaging suitable for registration as a diagnostic radiographer role.
- Identify and implement the requirements of applying radiation protection and health and safety regulations to the specific radiographic examinations.
- Apply critical and reflective thinking to clinical scenarios, including understanding how decision-making impacts on the quality of clinical practice, assessing information and demonstrating appropriate inquiry, including those relating to complex problems.
- Demonstrate through clinical placement professional and ethical conduct, sound patient care, high levels of communication and autonomy.
- Implement and evaluate a range of diagnostic imaging examinations, adapt technique and approach to suit a range of patient clinical complexities and presentations and have the capacity to investigate alternative and emerging imaging techniques for optimal health-care delivery.
- Demonstrate autonomous work-practices while also being capable of working in adynamic and fast-moving team environment.
- Maintain a current knowledge of digital biomedical imaging techniques and technologies, whilst incorporating new knowledge into clinical practice using an evidence-based approach.

## Career Opportunities

After completing the Bachelor of Science Degree in Medical Diagnostic Imaging, graduates will be able to enter their careers in the following areas:

- Diagnostic Medical Sonographer
- Magnetic Resonance Technologist

- Radiographer
- Cardiovascular Technologist
- Medical Imaging Technician
- Nuclear Medicine Technologist
- Radiation Protection Technician
- Radiation Technical Services Quality Manager
- Radiation Therapist

## Program Curriculum

### Program Requirements (139 CHs)

| Course Category | Credits | Courses |
|---|---|---|
| General Requirements | 33 | 11 |
| Basic Medical Science Courses | 12 | 4 |
| Basic Science Courses | 6 | 2 |
| Major Medical Diagnostic Imaging (MDI) | 88 | 42 |
| **Total Credits** | **139** | **59** |

### General Education Requirements (33 CHs)

| Course Code | Course Title | Prerequisite | Credit hours |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | None |
| GEN100/GEN101 | Communication Skills in Arabic/ CommunicationSkills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG 104 | English II | 3 | ENG 100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG 100 |
| GEN 201 | Psychology | 3 | ENG 100 |
| GEN 302 | Fundamentals of Innovation andEntrepreneurship | 3 | ENG 100 |
| GEN 304 | Ethics | 3 | ENG 100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

### Basic Medical Science Courses – (12 CHs)

| Course Code | Course Title | Prerequisite | Credit hours |
|---|---|---|---|
| BMS 110 | Medical Terminology | 3 | |
| BMS 121 | Human Anatomy | 3 | BMS110 |
| BMS 122 | Human Physiology | 3 | BMS110 |
| BMS 410 | Pathology | 3 | BMS121, BMS122 |

### Basic Science Courses – (6 CHs)

| Course Code | Course Title | Prerequisite | Credit hours |
|---|---|---|---|
| BSC 220 | Biostatistics | 3 | MTH 105 |
| BSC 221 | Research Methods for Health Science | 3 | BSC 220 |

## Core Major Courses – (88 CHs)

| Course Code | Course Title | Prerequisite | Credit hours |
|---|---|---|---|
| MDI 121 | Medical physics | 3 | |
| MDI 102 | Introduction to medical diagnostic imaging. | 1 | |
| MDI 202 | Radiation biology and Radiation protection. | 2 | MDI 102 |
| MDI 211 | Physics of radiology | 3 | MDI 121, MDI 102 |
| MDI 212 | Digital image processing and analysis | 1 | MDI 211 |
| MDI 214 | Digital image processing and analysis lab | 1 | MDI 211 |
| MDI 216 | Principles of Diagnostic Imaging 1 | 2 | MDI 211 |
| MDI 218 | Principles of Diagnostic Imaging 1 lab | 1 | MDI 211 |
| MDI 224 | Peripheral osseous system radiography | 2 | BMS 121 |
| MDI 226 | Peripheral osseous system radiography lab | 1 | BMS 121 |
| MDI 228 | Patient care in radiology department | 2 | MDI 102 |
| MDI 230 | Patient care in radiology department lab | 1 | MDI 102 |
| HCM 323 | Quality Management in Healthcare | 3 | |
| HIM 423 | Introduction to Healthcare Informatics | 3 | CIT 100 |
| MDI 311 | Principles of Diagnostic Imaging 2 | 2 | MDI 216 |
| MDI 313 | Principles of Diagnostic Imaging 2 lab | 1 | MDI 216 |
| MDI 327 | Central osseous system radiography | 2 | MDI 226 |
| MDI 329 | Central osseous system radiography lab | 1 | MDI 226 |
| MDI 333 | Radiographic surface anatomy | 2 | MDI 218 |
| MDI 335 | Radiographic surface anatomy lab | 1 | MDI 218 |
| MDI 334 | Radiographic cross sectional anatomy | 2 | MDI 335 |
| MDI 336 | Radiographic cross sectional anatomy lab | 1 | MDI 335 |
| MDI 346 | Radiologic pathology | 3 | BMS 410 |
| MDI 350 | Breast Imaging | 1 | MDI 313, MDI 230 |
| MDI 352 | Fluoroscopic imaging | 2 | MDI 311 |
| MDI 354 | Fluoroscopic imaging lab | 1 | MDI 311 |
| MDI 356 | Dental radiography | 1 | MDI 329 |
| MDI 362 | Ultrasound | 3 | MDI 313 |
| MDI 376 | Nuclear medicine | 3 | MDI 211 |
| MDI 413 | Quality control in medical imaging | 2 | MDI 311 |
| MDI 415 | Quality control in medical imaging lab | 1 | MDI 311 |
| MDI 444 | Evidence-based Imaging | 3 | MDI 465, MDI 469 |
| MDI 453 | Vascular imaging | 2 | MDI 352 |
| MDI 455 | Vascular imaging lab | 1 | MDI 352 |
| MDI 463 | Magnetic resonance imaging | 2 | MDI 336 |
| MDI 465 | Magnetic resonance imaging lab | 1 | MDI 336 |
| MDI 467 | Computed tomography | 2 | MDI 336 |
| MDI 469 | Computed tomography lab | 1 | MDI 336 |
| MDI 419 | Graduation Project | 3 | BSC220 |
| MDI 385 | Internship I | 3 | MDI 226 |
| MDI 487 | Internship II | 6 | MDI 385 |
| MDI 488 | Internship III | 9 | MDI 487 |

## About the Program

The Bachelor of Science in Emergency Medical Care (BSEMC) will prepare you to work inthe hospital and healthcare industry as an Advanced Paramedic/Emergency Medical Technologist, providing support and assistance primarily to patients out-of-hospital withmedical or trauma emergencies. It will provide in-depth knowledge of emergency medicalresponse, emergency preparedness and management, disaster planning and response, and illness and injury prevention.

Field experience is an integrated component of the curriculum. There are four clinical practice courses in the program as part of clinical exposure and an internship conducted in affiliated hospitals in the UAE. Pre-hospital experience is an essential element of clinicaltraining to enable you to develop and gain the required emergency care skills, reinforce theoretical knowledge through real clinical case scenarios, and develop a high level of professionalism through exposure to healthcare settings.

The program is supported by simulation labs equipped with high-fidelity ICU and traumamanikins, invasive and non-invasive ventilators, and task trainers for various procedures such as airway management, vascular access, etc. As well as clinical knowledge and skills,the program provides the capabilities required to become a researcher and leader in specific areas of interest.

**Students who successfully complete 71 credits during the first two years will be eligible for the award of a DIPLOMA IN EMERGENCY MEDICAL CARE.**

## Objectives

- Provide a professional educational program in Emergency Medical Care
- Prepare professional and competent paramedics to meet the growing needs of thehealthcare sector in the Emirate of Abu Dhabi, the UAE, and the region
- Exhibit exemplary professionalism parallel to the ethical standards of the medicalprofession and in accordance with the teachings and values of the UAE
- Prepare students for recognition by accredited international certification bodies

## Learning Outcomes

- Describe anatomy, physiology, pathophysiology, topographic anatomy and other body systems
- Memorize correct medical abbreviations, symbols, terminologies to communicate with health care professionals regarding patient conditions

- Exhibit professional, ethical, and compassionate behavior when interacting with diverse groups of patients and their families, health care professionals, and community members
- Outline the essential information, procedures, and equipment related to the role of an emergency medical care professional
- Recognize the introductory aspects of an emergency medical care and services system, roles and responsibilities of the EMC specialist, quality improvement, andmedical direction
- Understand the fundamental principles of pharmacokinetics and pharmacodynamics for drugs relevant to emergency medical care
- Define proficient medical knowledge in providing pre-hospital and emergency medical care
- Recognize basic knowledge about blunt trauma, penetrating trauma, shock and hemorrhage, gaining and extrication, burn, musculo-skeletal trauma, and soft tissue trauma
- Outline the steps to perform diagnostic, therapeutic, and ancillary EMC procedures
- Identify the parts and function of diagnostic, therapeutic and other adjunct EMC equipment
- Describe body mechanics, immobilization, lifting, splinting and carrying techniques, principles of moving patients, and an overview of EMC equipment
- Describe the necessary knowledge to diagnose and deal with emergency medical cases, including cardiology, respiratory, anaphylaxis, urology, gynecology, obstetrics, and toxicological, altered mental status, its differentials, and environmental emergencies
- Describe the various basic and advanced cardiopulmonary and trauma assessmentmodalities and procedures
- Properly select the required EMC equipment to carry out basic and advanced procedures in an EMC care plan
- Identify current and potential hazards and safe practice for EMC providers, patients, and bystanders within a scene environment.
- Effectively recognize normal and abnormal findings in patient assessments to identify mechanism of injury or nature of illness, laboratory data, diagnostic imaging, audio-visual interfaces (monitors), graphic forms, and prints
- Evaluate the general impression of a patient, determining responsiveness, assessment of the airway, breathing and circulation, and determine the priorities of patient care.
- Apply tactical management, critical thinking, and ethical decision-making skills to lead and operate an Emergency Medical Services (EMS) Unit
- Demonstrate the necessary skills to judge the priority of interventions needed to improve the patient's outcome within the EMC field of practice
- Differentiate causation of medical emergencies, formulating a treatment plan, packaging for trauma and medical patients and administering treatment based onfindings

- Demonstrate effective use of Automated Defibrillators within all clinical cases for all age groups
- Perform cardiac arrest and airway management in adult, pediatric, and neonatal patients
- Manipulate different types of artificial airways, suction equipment, oxygen equipment and delivery systems, and resuscitation devices
- Demonstrate basic and advanced laboratory and clinical practical techniques
- Use laboratory and information-based technology to generate data and hypotheses
- Accurately interpret results of radiographic, laboratory data, blood gases, invasiveand non-invasive monitoring, and ventilator mechanics
- Explain the components of a communication system, radio communications, and communication with medical direction, verbal communication, interpersonal communication, and quality improvement
- Demonstrate proficiency in pre-hospital assessments and treatments using advanced medical techniques and equipment available within the EMC's scope of practice
- Demonstrate an ability to adapt to changing patient conditions and scenes, utilizingavailable resources and working in the most challenging environments
- Interpret local or national protocols for disease prevention, ambulance operation,and practice scene safety as it relates to the rescue, other rescuers, and the patient
- Construct patient care reports, both oral and written, explaining patient condition,treatment rendered, that can be clearly understood by other medical professionals
- Obtain pertinent information from medical personnel, patients, and/or relatives, medical records, and various hospital forms
- Demonstrate skills in patient extrication, packaging, and safe movement
- Demonstrate lifting, moving, and carrying techniques for critical patients
- Establish the ability to interact with patients in a compassionate and professional manner
- Use information technology to obtain information and conduct research
- Work effectively in a team, being respectful of cultural diversity and individualdifferences
- Establish safe working practices for self and others related to equipment andmachinery, handling of product, disposal of materials, and relevant legislation

## Career Opportunities

After completing the Bachelor of Science in Emergency Medical Care, numerous career opportunities are available to you. Here are some of the areas previous graduates of theprogram have gone on to work in:

- Road Ambulances
- Air Ambulances

- Emergency Departments
- Police Departments
- Military Medicine
- Advanced Degrees, including Master of Science, Doctorate Studies, and Post-Doctoral Fellowships
- Research Centers
- Medical Equipment Companies as Clinical Application Specialists

## Program Curriculum

### Program Curriculum – [44 Courses – 175 Credit hours]

The study plan composed of the following:

| No | Course Category | Courses | Credits |
|---|---|---|---|
| 1 | General Education Requirements | 11 | 33 |
| 2 | Basic Science Requirements | 5 | 15 |
| 3 | Basic Medical Science Requirements | 7 | 21 |
| 4 | Core Major Requirements | 21 | 106 |
| **Total** | | **44** | **175** |

### General Requirements (33 CH)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | None |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG 104 | English II | 3 | ENG 100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG 100 |
| GEN 201 | Psychology | 3 | ENG 100 |
| GEN 302 | Fundamentals of Innovation and Entrepreneurship | 3 | ENG 100 |
| GEN 304 | Ethics | 3 | ENG 100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

### Basic Science Courses- 5 Courses (15 CH)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BSC 120 | Physics for Health Sciences | 3 | |
| BSC 121 | Chemistry for Health Sciences | 3 | |
| BSC 122 | Biology for Health Sciences | 3 | |
| BSC 220 | Biostatistics | 3 | |
| BSC 221 | Research Methods for Health Sciences | 3 | BSC 220 |

## Basic Medical Science Courses- 7 Courses (21 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BMS 110 | Medical Terminology | 3 | |
| BMS 121 | Human Anatomy | 3 | BMS 110 |
| BMS 122 | Human Physiology | 3 | BMS 110 |
| BMS 123 | Biochemistry | 3 | BSC 121 |
| BMS 124 | Introduction to Microbiology | 3 | |
| BMS 410 | Pathology | 3 | BMS 121, BMS 122 |
| BMS 411 | General Pharmacology and Toxicology | 3 | BMS 122 |

## Core Major Courses- 21 Courses (106 CH)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| ECM 210 | Introduction to Paramedicine | 5 | BMS 122 |
| ECM 211 | Patient Assessment | 5 | BMS 122 |
| ECM 220 | Airway and Respiratory Emergencies | 5 | ECM 210 + ECM 211 |
| ECM 221 | Trauma I | 5 | ECM 210 + ECM 211 |
| ECM 310 | Trauma II | 5 | ECM 221 |
| HCM323 | Quality Management in Healthcare | 3 | |
| HCM 212 | Healthcare Delivery System | 3 | |
| ECM 311 | Cardiovascular I | 3 | ECM 220 |
| ECM 312 | Medical Emergencies | 5 | ECM 220 |
| ECM 313 | Paramedic Clinical Practice I | 3 | Level 1-4 Major courses |
| ECM 320 | Obstetrics and Pediatric Emergencies | 5 | ECM 312 |
| ECM 321 | EMC Operations I | 5 | ECM 221 |
| ECM 410 | Special Patient Populations | 5 | ECM 320 |
| ECM 411 | Cardiovascular II | 4 | ECM 311 |
| ECM 420 | EMC Operations II | 5 | ECM 321 |
| ECM 421 | Trauma III | 5 | ECM 310 |
| ECM 422 | Paramedic Clinical Practice II | 3 | Level 1-7 Major courses |
| ECM 510 | Graduation Project | 3 | Level 1-8 Major courses |
| ECM 511 | Specialized Emergency Care | 5 | ECM 421 |
| ECM 512 | Paramedic Clinical Practice III | 6 | Level 1-8 Major courses |
| ECM 520 | Paramedic Clinical Practice IV | 18 | Level 1-9 Courses |

## About the Program

The Bachelor of Science in Respiratory Care will prepare you to work in the hospital andhealthcare industry as a Respiratory Care Specialist, Respiratory Therapist, or Respiratory Care Practitioner, caring for patients suffering from respiratory disorders. You will gain the knowledge and skills to deal competently with critically ill ICU patients and in advanced diagnostics and rehabilitation.

The program is supported by simulation labs equipped with high-fidelity ICU and traumamanikins, invasive and non-invasive ventilators, and task trainers for various procedures such as airway management, vascular access, etc. As well as clinical knowledge and skills,the program provides the capabilities required to become a researcher and leader in specific areas of interest.

The program has four clinical practice courses and an internship as part of clinical exposure. These courses enable you to gain the required respiratory care skills, reinforcethe knowledge of theory modules through real clinical case scenarios, and develop a highlevel of professionalism through exposure to healthcare settings.

## Objectives

- Prepare students for the cognitive, technical, and affective learning domains of respiratory care
- Educate future respiratory care professionals in the science and art of respiratory care, providing fundamental clinical skills, developing professionalism and ethical behavior, and the desire to advance the respiratory care profession through research
- Develop competencies in clinical and critical thinking skills necessary for the effective and safe delivery of respiratory care modalities
- Meet or exceed the minimum expectations of the Abu Dhabi Department of Health(DOH), Ministry of Health, and international organizations that certify respiratory care professionals, such as the National Board for Respiratory Care
- Exhibit exemplary professionalism parallel to the ethical standards of the medicalsector
- Instill professionalism in accordance with the teachings and values of the UAE
- Instill the importance of scientific research to advance the practice of respiratory care

## Learning Outcomes

- Define medical terminologies, abbreviations, and symbols used in respiratory care
- Describe the human anatomy, physiology, and the anatomy of the cardiovascularand respiratory systems
- Explain the physiology of gas exchange, acid base regulation, and neurologiccontrol of respiration
- Describe cardiopulmonary diseases and other medical conditions that requirerespiratory care
- Explain the theories and principles essential to respiratory care concepts, procedures, and equipment
- Outline the steps in performing diagnostic, therapeutic, and ancillary respiratorycare procedures
- Identify respiratory care medications and other drugs associated with respiratorycare management
- Identify the parts and function of diagnostic, therapeutic, and other adjunctrespiratory care equipment
- Identify the different diagnostic, therapeutic, and ancillary modalities and procedures in respiratory care
- Describe the various basic and advanced cardiopulmonary assessment modalitiesand procedures
- Differentiate between scientific theories and principles and their application inrespiratory care physiology, modalities, and equipment
- Recognize normal and abnormal findings in physical assessment, laboratory data, diagnostic imaging (chest radiographs), audio-visual interfaces (monitors), and graphic forms, and prints.
- Properly select the required respiratory care equipment to carry out a respiratorycare plan
- Recognize and apply international and institutionally based standards, policies, guidelines, and protocols to carry out respiratory care management
- Apply ethical standards to resolve clinical dilemmas
- Perform diagnostic testing procedures, record and interpret results of chest radiographs, laboratory data, blood gas, cardiopulmonary function studies, polysomnography, and ventilator mechanics
- Appropriately select basic and advanced respiratory care modalities to carry out arespiratory care plan
- Develop an appropriate respiratory care plan based on a patient's specific needs
- Use laboratory and information-based technology to generate data and hypotheses
- Demonstrate basic laboratory practical techniques
- Carry out safety procedures in the laboratory and during patient care
- Perform basic therapeutic and advanced respiratory care procedures

competently

- Examine the patient systemically and professionally
- Operate cardiopulmonary monitoring for adequate monitoring within the boundaries of health
- Effectively communicate both orally and in writing
- Obtain pertinent information from medical personnel, patients and/or relatives,medical records, and various hospital forms
- Explain and provide instructions to a patient when performing diagnostic andtherapeutic maneuvers or procedures
- Provide oral reports/endorsements (e.g., patient's clinical status, changes inclinical plan or settings) to colleagues and other medical staff
- Accurately read, obtain, and analyze data from graphic forms/flow sheets, printouts, analog and digital graphic displays
- Accurately provide information and/or data on respiratory care services and othermedical forms
- Use information technology to obtain information and conduct research
- Work effectively as part of a team, respecting cultural diversity and individualdifferences
- Establish safe working practices for self and others relating to equipment andmachinery, handling of products, disposal of materials, and relevant legislation

## Career Opportunities

After completing the Bachelor of Science in Respiratory Care, numerous career opportunities are available to you. Here are some of the types of organizations previousgraduates of the program have secured the position:

- Multidisciplinary Adult ICUs
- Pediatric and Neonatal ICUs
- Pulmonary Function Laboratories
- Emergency Departments
- Pulmonary Rehabilitation Centers/ Home Care
- Sleep Laboratories
- Asthma/COPD Education
- Research Centers/Respiratory Scientists
- Medical Equipment Companies as Clinical Application Specialists
- Advanced Degrees, including Master of Science, Doctorate Studies, and Post-Doctoral Fellowship

# Program Curriculum

## Program Curriculum – [49 Courses – 163 Credit hours]The study plan composed of the following:

| No | Course Category | Courses | Credits |
|---|---|---|---|
| 1 | General Education Requirements | 11 | 33 |
| 2 | Basic Science Requirements | 5 | 15 |
| 3 | Basic Medical Science Requirements | 7 | 21 |
| 4 | Core Major Requirements | 26 | 94 |
| **Total** | | **49** | **163** |

## General Requirements – 11 Courses (33 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| ENG 100 | English I | 3 | None |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG104 | English II | 3 | ENG 100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG 100 |
| GEN 201 | Psychology | 3 | ENG 100 |
| GEN 302 | Fundamentals of Innovation and Entrepreneurship | 3 | ENG 100 |
| GEN 304 | Ethics | 3 | ENG 100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

## Basic Science Courses- 5 Courses (15 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BSC 120 | Physics for Health Sciences | 3 | |
| BSC 121 | Chemistry for Health Sciences | 3 | |
| BSC 122 | Biology for Health Sciences | 3 | |
| BSC 220 | Biostatistics | 3 | |
| BSC 221 | Research Methods for Health Sciences | 3 | BSC 220 |

## Basic Medical Science Courses- 7 Courses (21 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BMS 110 | Medical Terminology | 3 | |
| BMS 121 | Human Anatomy | 3 | BMS 110 |
| BMS 122 | Human Physiology | 3 | BMS 110 |
| BMS 123 | Biochemistry | 3 | BSC 121 |
| BMS 124 | Introduction to Microbiology | 3 | |
| BMS 410 | Pathology | 3 | BMS 121, BMS 122 |
| BMS 411 | General Pharmacology and Toxicology | 3 | BMS 122 |

## Core Major Courses- 26 Courses (94 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| RCM 220 | Cardiopulmonary Anatomy and Physiology | 3 | BMS 121, BMS 122 |
| RCM 221 | Introduction to Respiratory Care Profession | 2 | BMS 121, BMS 122 |
| RCM 310 | Respiratory Care Science I | 4 | BMS 121, BMS 122 CR: RCM 220, RCM311 |
| RCM 311 | Patient Assessment | 4 | RCM 220 |
| RCM 320 | Cardiopulmonary Diseases I | 3 | RCM 220 + BMS 410 |
| RCM 321 | Fundamentals of Polysomnography | 3 | RCM 220 |
| RCM 322 | Mechanical Ventilation I | 3 | RCM 310 + RCM 311 |
| RCM 323 | Respiratory Care Science II | 3 | RCM 310 + RCM 311 |
| RCM 324 | Respiratory Care Clinical Practice I | 3 | RCM 310 + RCM 311 |
| HCM 323 | Quality Management in Healthcare | 3 | |
| HIM 423 | Introduction to Healthcare Informatics | 3 | |
| RCM 410 | Mechanical Ventilation II | 4 | RCM 322, RCM 320, RCM 323 |
| RCM 411 | Respiratory Care Clinical Practice II | 3 | RCM 324, RCM 323 |
| RCM 412 | Patient Care Management Seminar | 2 | RCM 320, RCM 322 RCM 323 |
| RCM 413 | Cardiopulmonary Diseases II | 3 | RCM 320, RCM 411 |
| RCM 414 | Pulmonary Function Diagnostics | 3 | RCM 220 + RCM 320 |
| RCM 420 | Multidisciplinary Respiratory Care | 3 | RCM 410, RCM 323 RCM 413 |
| RCM 421 | Pulmonary Rehabilitation and Home Care | 3 | RCM 413 |
| RCM 422 | Pediatric Respiratory Care | 3 | RCM 410, RCM 323 |
| RCM 423 | Respiratory Care Clinical Practice III | 8 | RCM 411 |
| RCM 424 | Neonatal Respiratory Care | 3 | RCM 410, RCM 323, RCM 422 |
| RCM 510 | Clinical Simulation Seminar | 2 | RCM 420, RCM 422 |
| RCM 511 | Essentials of Critical Care | 2 | RCM 420 |
| RCM 512 | Respiratory Care Seminar | 2 | RCM 422, RCM 420 |
| RCM 513 | Graduation Project | 3 | BSC 221, Level 1-8 Major Courses |
| RCM 520 | Respiratory Care Clinical Practice IV | 16 | Level 1-9 Courses |

## About the Program

**(The First & Only Occupational Therapy Program in the UAE – Addressing a Critical Healthcare Need with Strong Industry Partnerships)**

Occupational Therapy (OT) is a specialized healthcare profession that empowers individuals of all ages to regain independence and improve their quality of life. Unlike other rehabilitation fields that focus solely on movement or medical care, OT addresses both physical and cognitive challenges, using personalized interventions to help people engage in meaningful daily activities.

This first and only undergraduate OT program in the UAE stands out by focusing on rehabilitation, adaptation, and improving daily function rather than just treatment. Students benefit from extensive hands-on training through partnerships with over 40 hospitals, rehabilitation centers, and healthcare facilities across Abu Dhabi and the UAE,providing clinical internships, mentorship, and job placement opportunities.

OT takes a holistic and client-centered approach, integrating mental health support, special education interventions, and workplace adaptation. Additionally, the program strongly aligns with the UAE's National Policy for People of Determination, equipping students with expertise in assistive technology, home and workplace modifications, and inclusive rehabilitation strategies.

## Occupational therapists work with:

- Children with developmental delays or disabilities (e.g., autism, ADHD, cerebralpalsy).
- Patients recovering from strokes, injuries, or surgeries who need assistance withdaily tasks.
- Individuals with mental health challenges (e.g., depression, PTSD, schizophrenia)to enhance social and work-related skills.
- Elderly individuals needing mobility support, home modifications, or memory care.
- Workers recovering from injuries or requiring ergonomic adjustments.

Through a combination of academic excellence and practical training, the BSOT programprepares students to make a meaningful impact in the healthcare sector.

## Objectives

- Provide students with a comprehensive foundation in the principles and practicesof occupational therapy.
- Prepare graduates to address the diverse needs of individuals and communitiesacross various contexts.
- Promote ethical, culturally sensitive, and evidence-based practices in

occupationaltherapy.

- Develop graduates who can collaborate effectively with interdisciplinary teams.
- Encourage professional growth, lifelong learning, and contributions to occupationaltherapy research.
- Foster a commitment to advocacy, leadership, and community service in the fieldof occupational therapy.

## Learning Outcomes

- Demonstrate a comprehensive understanding of OT theories, models, and practices, applying these to diverse clinical settings.
- Assess and evaluate clients' occupational performance using standardized and non-standardized tools, with attention to physical, cognitive, and psychosocial factors.
- Design and implement client-cantered, evidence-based intervention plans that enhance clients' health, well-being, and participation in daily life activities.
- Apply clinical reasoning to solve complex problems and adapt interventions basedon client progress and contextual factors.
- Effectively communicate and collaborate with interdisciplinary teams, clients, andcaregivers to provide holistic, client-cantered care.
- Demonstrate leadership, management, and ethical integrity in occupational therapy practice by utilizing assistive technologies, conducting research to advance evidence-based interventions, advocating for the profession, and committing to continuous professional development in adherence to regulatory standards.

## Career Opportunities

After completing the Bachelor of Science in Occupational Therapy, numerous career opportunities are available to you. Here are some of the types of organizations where previous graduates of the program have secured the position:

- Occupational Therapist
- Rehabilitation Specialist
- Paediatric Occupational Therapist
- Geriatric Occupational Therapist
- Mental Health Therapist
- Ergonomics Specialist
- Assistive Technology Specialist
- School-Based Occupational Therapist
- Community Health Advocate
- Researcher or Academic
- Case Manager
- Disability Consultant
- Home Health Therapist

- Vocational Rehabilitation Therapist
- Palliative Care Therapist

Upon completion, graduates will be eligible for professional certification and licensing, enabling them to contribute to the healthcare sector both locally and internationally.

## Program Curriculum

### Program requirements (138 CHs)

| No | Course Category | Courses | Credits |
|---|---|---|---|
| 1 | General Requirements | 11 | 33 |
| 2 | Basic Medical Sciences | 7 | 21 |
| 3 | Basic Sciences | 5 | 15 |
| 4 | Core Major Courses | 23 | 69 |
| **Total** | | **46** | **138** |

### General Education – 11 Courses (33 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| ENG 100 | English I | 3 | High School English score of 80 |
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |

## About the Program

**(A Leading Program for Advanced Rehabilitation and Movement Sciences in the UAE with Extensive Clinical Training Partnerships)**

Physiotherapy (also known as physical therapy) is a healthcare profession focused on movement, mobility, and physical rehabilitation. It helps individuals recover from injuries,surgeries, and chronic conditions by improving movement, reducing pain, and enhancingphysical function.

**Physiotherapists work with:**

- Patients recovering from injuries (sports, accidents, work-related injuries).
- Individuals with chronic pain conditions (arthritis, lower back pain, sciatica).
- Patients recovering from surgery (e.g., knee replacement, spinal surgeries).
- People with neurological conditions (stroke, Parkinson's disease, multiplesclerosis).
- Athletes looking to enhance performance or prevent injuries.

**Objectives**

- Provide students with a strong foundation in the principles and practices ofphysiotherapy.
- Develop graduates capable of addressing diverse health and rehabilitation needs.
- Promote professional behavior and lifelong learning in physiotherapy practice.
- Prepare graduates to contribute to the advancement of physiotherapy knowledgeand practice.
- Foster interdisciplinary collaboration and effective communication in healthcaresettings.
- Enable graduates to serve as advocates for health promotion and community well-being.

## Learning Outcomes

- Demonstrate comprehensive knowledge of human anatomy, physiology, and biomechanics as they apply to physiotherapy practice.
- Utilize critical thinking and problem-solving skills to assess, diagnose, and formulate effective treatment plans for various physical impairments.
- Implement physiotherapy interventions safely and efficiently, incorporating manual therapy, therapeutic exercises, and advanced rehabilitation technologies.

- Integrate evidence-based practice to enhance patient care, improve clinical outcomes, and support continuous professional development.
- Communicate effectively and empathetically with patients, families, and healthcareprofessionals while upholding professionalism and ethical standards.
- Apply ethical principles, professional guidelines, and evidence-based approaches to design individualized rehabilitation programs and collaborate within multidisciplinary teams to optimize patient outcomes.

## Career Opportunities

Graduates of the Bachelor of Science in Physiotherapy program can work in:

- Corporate Wellness & Workplace Health Programs
- Hospitals & Physiotherapy Clinics
- Neurological & Orthopaedic Rehabilitation Units
- Sports Rehabilitation Centres

With the UAE's healthcare sector rapidly expanding, physiotherapy remains one of themost in-demand health professions, offering strong career prospects for graduates.

## Program Curriculum

### Program requirements (133 CHs)

| No | Course Category | Courses | Credits |
|---|---|---|---|
| 1 | General Requirements | 11 | 33 |
| 2 | Basic Medical Sciences | 7 | 21 |
| 3 | Basic Sciences | 5 | 15 |
| 4 | Core Major Courses | 22 | 64 |
| Total | | 45 | 133 |

### General Education – 11 Courses (33 CHs)

| Course Code | Course Title | CH | Prerequisite |
|---|---|---|---|
| ENG 100 | English I | 3 | High School English score of 80 |
| CIT 100 | Introduction to Information Technology *(Applicable for students who joined LU prior to Fall 2025)* | 3 | None |
| CIT 101 | Introduction to Generative AI *(Applicable for students who joined LU as of Fall 2025)* | | |
| GEN100/ GEN101 | Communication Skills in Arabic/ Communication Skills in Arabic for non-Arabic speakers | 3 | None |
| GEN 102 | Islamic Culture (Arabic/English) | 3 | None |
| GEN 105 | Emirates Culture and Society | 3 | None |
| ENG104 | English II | 3 | ENG 100 |
| GEN 103 | Logic and Critical Thinking | 3 | ENG 100 |
| GEN 201 | Psychology | 3 | ENG 100 |
| GEN 302 | Fundamentals of Innovation and Entrepreneurship | 3 | ENG 100 |
| GEN 304 | Ethics | 3 | ENG 100 |
| MTH 105 | Mathematics and Statistics | 3 | None |

## Basic Science Courses – 5 Courses (15 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BSC 121 | Chemistry for Health Sciences | 3 | None |
| BSC 220 | Biostatistics | 3 | None |
| BSC 221 | Research Methodology for Health Science | 3 | BSC 220 |
| BSC 122 | Biology for Health Sciences | 3 | None |
| BSC 120 | Physics for Health Sciences | 3 | None |

## Basic Medical Science Courses- 7 Courses (21 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| BMS 110 | Medical Terminology | 3 | |
| BMS 121 | Human Anatomy | 3 | BMS 110 |
| BMS 122 | Human Physiology | 3 | BMS 110 |
| BMS 123 | Biochemistry | 3 | BSC 121 |
| BMS 124 | Introduction to Microbiology | 3 | |
| BMS 411 | General Pharmacology and Toxicology | 3 | BMS 122 |
| BMS 410 | Pathology | 3 | BMS 121, BMS 122 |

## Core Courses – 22 Courses (64 CHs)

| Course Code | Course Title | Credit Hours | Prerequisite |
|---|---|---|---|
| PT 301 | Introduction to Physiotherapy | 3 | BMS 122 |
| MDI 102 | Introduction to medical diagnostic imaging | 1 | None |
| OT 203 | Neuroscience | 3 | BMS 122 |
| PT 304 | Therapeutic exercise | 3 | PT 301 |
| PT 305 | Biomechanics and kinesiology -1 | 3 | PT 301 |
| PT 306 | Physiotherapy for Respiratory Conditions | 3 | PT 301 |

*The first foundational diploma in the UAE combining core elements of Health Managementand Health Information Systems, preparing skilled support professionals for healthcare operations and digital transformation.*

## About the Program

The Diploma in Health Management and Informatics (D-HMI) is a foundational program designed to prepare students for entry-level roles in the evolving healthcare sector by combining essential knowledge in healthcare management, health information systems, and medical data handling. This diploma equips students with practical skills to support healthcare operations and contribute to efficient service delivery in both clinical and administrative settings.

Throughout the program, students will be introduced to key topics such as healthcare delivery frameworks, basic medical terminology, fundamentals of medical coding and billing, electronic health records, and the principles of health data confidentiality and ethics. The curriculum emphasizes applied learning, ensuring that students gain hands- on experience through practical training and exposure to real-world healthcare environments.

The D-HMI program offers a strong platform for students seeking immediate employment opportunities or those planning to continue their education in health management, healthinformatics, or related fields. Graduates will be well-positioned to support the healthcare sector's growing needs for skilled professionals capable of working with information systems and administrative tools in hospitals, clinics, insurance companies, and public health organizations.

**Graduates of the Diploma in Health Management and Informatics work with:**

- Healthcare institutions to support the implementation of administrative systemsthat enhance patient services and day-to-day operations.
- Medical records departments to assist in maintaining accurate documentation andensuring the secure handling of patient information.
- Insurance and billing offices to carry out basic medical coding, claims processing,and data entry tasks related to reimbursement.
- Public health and administrative teams to help collect and organize health data forreporting and operational use.
- Technology and IT teams in supporting roles related to electronic health recordsand healthcare information systems.

Through a focused curriculum and practical training, the D-HMI program prepares students to take on essential support roles in healthcare settings, contributing to the accuracy, efficiency, and quality of healthcare services across hospitals, clinics, and insurance providers.

## Objectives

- Describe the structure and function of healthcare delivery systems, including publichealth and hospital administration frameworks.
- Apply biostatistical methods to analyze healthcare data and support evidence-based decision-making.
- Demonstrate proficiency in medical terminology and apply it accurately in healthdocumentation and communication.
- Develop strategic plans for healthcare organizations, incorporating economic,financial, and operational principles.
- Interpret and apply medical coding systems and insurance protocols to ensureaccurate billing and reimbursement.
- Evaluate health policies and propose recommendations for improving healthcareaccess, equity, and outcomes.

## Learning Outcomes

- Apply core management principles to effectively lead and support operationswithin healthcare organizations.
- Utilize health information systems and medical coding standards to support decision-making and patient care documentation.
- Analyze and interpret health data using statistical tools to inform public healthstrategies and policy development.
- Demonstrate ethical and legal responsibility in the management of healthcareservices and information.
- Design and evaluate quality improvement initiatives that enhance patient safetyand healthcare delivery systems.
- Communicate effectively and collaborate with multidisciplinary teams to promoteefficient healthcare practices and patient-centered care.

## Career Opportunities

After completing the Diploma in Health Management and Informatics, numerous career opportunities are available to you. Here are some of the positions graduates of the program have secured:

## Health Information & Data Management

- Clinical Coding Specialist
- Health Information Analyst
- Health Information Manager
- HIM Director
- Information Governance and Access Specialist
- Medical Records Technician
- Privacy Officer
- Revenue Cycle Specialist

## Health Informatics & Digital Transformation

- Compliance and Risk Management Officer
- Healthcare Compliance Officer
- Health Data Analyst
- Health Information Technology Director
- Healthcare IT Project Manager
- Healthcare Project Manager

## Healthcare Management & Administration

- Health Operations Manager
- Hospital Administrator / Healthcare Facility Manager
- Medical Administrative Officer / Assistant
- Medical and Health Services Manager
- Provider Network Manager

## Finance, Strategy & Policy

- Financial Manager / Analyst in Healthcare
- Healthcare Consultant / Strategist
- Healthcare Policy Analyst
- Medical Claims and Insurance Manager
- Quality Improvement Specialist / Coordinator

## Marketing & Development

- Healthcare Marketing and Business Development Specialist

Upon completion of the program, graduates will be eligible for professional certificationsand licensure, enabling them to work in the healthcare sector both locally and internationally.

## About the Program

The Diploma in Medical Laboratory Analysis will prepare you to work in the medical laboratory sector, using up-to-date instruments and biochemical, microscopic, molecular, and immunological techniques to analyze blood, tissues, and other medical specimens. You will learn to provide essential information about the presence, extent, or absence ofdisease to physicians and other healthcare professionals and gain problem-solving, dataanalysis, computer, and good oral and written communication skills.

Upon completion of the program, you will be able to demonstrate knowledge in the fields of Hematology, Transfusion Science, Clinical Chemistry, Microbiology, and Histopathology.

After graduation, will be required to meet licensing procedures to practice as determinedby the United Arab Emirates (UAE), the region, globally, and any other employer regulations.

## Objectives

- The Diploma in Medical Laboratory Analysis program objectives are:
- Provide a professional educational program in Medical Laboratory Analysis.
- Graduate professional, competent laboratory technician to meet the growing needsof the healthcare sector in the Emirate of Abu Dhabi, UAE and the region.
- Exhibit exemplary professionalism parallel to the ethical standards of the medicalprofession and in accordance with the teachings and values of the UAE.
- Prepare students for recognition by accredited international certification bodies.

## Learning Outcomes

- Acquire and interpret knowledge to apply in the medical laboratory setting.
- Demonstrate knowledge of current technological advances and evidence-based medical laboratory best practice.
- Acquire knowledge of the principles and safety regulations of clinical laboratory instrumentation
- Exhibit a range of technical skills to analyze clinical specimens, interpret test results, recognize and solve errors. Demonstrate ability to propose differential

diagnoses in clinical cases.

- Demonstrate skills in the use of standard and advanced medical laboratory instruments, information technology.
- Demonstrate skills in producing appropriate documentation including reports of diagnostic results.
- Effectively present concepts through oral and written communication skills in English and visually through illustrative and technical rendering. Investigate problems through systematic research and effectively disseminate findings.
- Work effectively as an independent as well as a contributing team member respectful of cultural diversity and individual differences.
- Establish safe working practices for self and others regarding equipment, handlingof biological samples, reagent products, disposal of waste materials and relevant legislation.

## Career Opportunities

After completing the Diploma in Medical Laboratory Analysis, numerous career opportunities are available to you. Here are some of the organizations in which graduatesof the program have secured positions:

- Clinical Laboratories
- Hospitals
- Research Centers
- Blood Banks
- Medical Equipment Companies as Clinical Application Specialists
- Transfer to the Bachelor of Science in Medical Laboratory Sciences

## About the Program

The Diploma in Emergency Medical Care provides students with the essential skills to deliver life-saving interventions in emergency situations. Through practical training in patient care, trauma management, and advanced medical procedures, graduates are prepared for careers as paramedics or emergency responders in various pre-hospital caresettings.

Students gain expertise in both basic and advanced emergency techniques while developing strong communication, problem-solving, and teamwork skills in high-pressure environments. Upon successful completion, graduates will be eligible for certification andlicensing by UAE and international bodies, ensuring their readiness to work in emergencymedical services both locally and globally.

## Objectives

- The objectives of the Diploma in Emergency Medical Care program are:
- Provide students with a professional educational program in Emergency MedicalCare
- Graduate professional, competent paramedics to meet the growing needs of thehealthcare sector in the Emirate of Abu Dhabi, UAE, and the region.
- Exhibit exemplary professionalism parallel to the ethical standards of the medicalprofession and in accordance with the teachings and values of the UAE.
- Prepare students for recognition by accredited international certification bodies.

## Career Opportunities

After completing the Diploma in Emergency Medical Care, graduates will be able to entertheir careers in the following areas:

- Paramedics
- Ambulatory Care
- Primary Care Units
- Search & Rescue
- Emergency First Responder
- Academic & Research

College of
Media &
Public
Relations

# College of Media and Public Relations

Liwa University offers comprehensive programs in **Mass Communication** at both undergraduate and graduate levels, designed to equip students with the knowledge, skills, and creativity needed to excel in the evolving media landscape.

The **Bachelor of Mass Communication** provides four specialized concentrations: **Public Relations, Advertising, Digital Media, and Institutional &Government Communication.** The program prepares students for diverse career paths in government entities, media production companies, satellite and radio stations, and digital media organizations. Students gain hands-on experience in state-of-the-art studios and laboratories, as well as field applications, developing practical skills alongsidetheoretical knowledge. Classes are offered in the morning, evening, and on weekends toaccommodate working professionals and new students alike.

The **Master of Arts in Communication and Digital Media** builds on this foundationto develop advanced competencies in communication theory, digital media, research, critical thinking, and media analysis. Graduates are prepared to lead and support digital transformation in government and private institutions, contribute to innovative media initiatives, and make a meaningful impact on the UAE community. The program aligns with the country's strategic vision for a sustainable, knowledge-based economy and emphasizes applied projects and professional partnerships.

Both programs cultivate creativity, practical expertise, and a competitive edge, preparing graduates to succeed in the dynamic, fast-paced field of media and communications.

# Dean's Message

As we proudly transition from Liwa College to Liwa University, the College of Media and Public Relations (CMPR) enters a new era of academic excellence and innovation. This year, we have revamped our curricula to align with the latest academic and industry standards, expanded our program offerings with the introduction of a new specializationin Institutional (Corporate) and Governmental Communication, added two study optionsat the Al Ain campus, and achieved a milestone with the launch of our first Master of Artsin Communication and Digital Media.

Our core values remain unchanged:

Academic distinction, student-centred learning, diversity and inclusivity, research and creativity, and strategic partnerships.

With a visionary outlook and dedicated faculty, CMPR continues its journey to become akey pillar for media and public relations education in the UAE and the region. We invite all our stakeholders to join us in shaping the future, together.

**Prof. Badran Badran**

## About the Program

The Bachelor of Mass Communications Concentration in Institutional and Government Communication is designed to equip students with the knowledge and skills necessary toexcel in the dynamic fields of corporate and government communication. This program provides a strong foundation in strategic communication, media relations, crisis management, and digital engagement. Students will gain hands-on experience creating and implementing effective communication strategies for businesses, government agencies, and nonprofit organizations. Students will be well-prepared for the industry's evolving demands by exploring topics such as reputation management and the use of artificial intelligence in Institutional and Government communication.

## Objectives

- Providing students with a theoretical understanding of institutional and government communication and its impact on target audiences.
- Training students in the scientific foundations of communicating with various audiences, utilizing all communication tools and media, including artificial intelligence, and planning and executing effective communication strategies to achieve the goals of government institutions and business organizations.
- Equipping students with essential managerial and technical skills for Institutional and government communication roles, enabling them to implement various communication programs in business organizations scientifically.
- Graduating well-qualified communication professionals, both theoretically and practically, by providing them with contemporary knowledge on Institutional and government communication tools and preparing them to address challenges in thefield.
- Supplying government and private sector organizations with skilled professionals by establishing partnerships with governmental institutions to offer students practical training opportunities and continuously updating academic curricula to align with industry advancements.

## Learning Outcomes

- Explains the concept of Institutional and government communication, its objectives, functions, and levels.
- Produces various communication and media materials within institutions.
- Plans and collaborates within a team to develop diverse communication and mediaactivities and events.
- Evaluate Institutional and government communication programs in relevant organizations.
- Innovates communication activities for institutional use.

## Career Opportunities

## About the Program

The Master of Arts in Communication and Digital Media aligns with the UAE's strategicvision of building a sustainable and knowledge-based economy.

The program offers advanced education that bridges theoretical knowledge andpractical application in the fields of digital media and communication.

It focuses on equipping students with a deep understanding of contemporary communication theories and methodologies, while also developing their scientificresearch, critical thinking, and media analysis skills.

The program enhances students' practical capabilities by training them in advanced tools such as artificial intelligence and data analytics, enabling them to design innovative communication solutions that respond to a rapidly changing media landscape. Graduates will be empowered to lead digital transformation across governmental and private institutions and to contribute effectively to the UAE community through research-based projects and impactful professional partnerships.

## Objectives

- Provide students with advanced theoretical and practical knowledge in digital communication and media through the latest theories and methodologies, enablingthem to apply this knowledge professionally and academically.
- Develop students' critical and creative thinking by encouraging them to adopt innovative and analytical approaches in addressing challenges and conducting high-quality, methodologically sound research.
- Strengthen students' abilities to engage with modern digital communication technologies, such as AI and data analytics, to drive innovation in advanced mediaenvironments.
- Instil ethical values and sustainable practices in professional settings by enhancing students' understanding of media laws and ethics to promote responsible communication.
- Support scientific research and foster community engagement through innovativemedia initiatives and joint research projects that address pressing societal issues in the UAE.

## Learning Outcomes

- Explain advanced communication and media theories in various contexts.
- Utilize modern digital technologies in the fields of digital communication andmedia.
- Demonstrate the impact of digital communication on society across differentdomains.
- Analyze communication and media issues from cultural and ethical perspectives.
- Conduct academic research following scientific standards in the field of digitalcommunication and media.

## Career Opportunities

Graduates of the program are qualified to work in a wide range of specialized roles in thefields of digital media, institutional communication, and academic research across public,private, and research institutions. Career paths include:

- Community Media Projects Coordinator
- Digital Campaign Coordinator
- Digital Communication Researcher
- Digital Communication Strategy Specialist
- Digital Content Manager
- Digital Media Specialist in Government Institutions
- Media Data Analyst
- Media Technology Consultant
- Public and Institutional Media Relations Manager

# Course Descriptions

جامعة ليوا
Liwa University

# GENERAL EDUCATION COURSES

**Course Code: CIT100**
**Course Title: Introduction to Information Technology**
**Prerequisites: None**
**Course Description:**
This is an introductory personal computer applications course. It includes the operating system (MS Windows), word processing (MS Word), spreadsheets (MS Excel), and presentation manager (MS PowerPoint), database applications (MS Access).

**Course Code: CIT101**
**Course Title: Introduction to Generative AI**
**Prerequisites: None**
**Course Description:**
This course provides an introduction to essential software applications, including the operating system (MS Windows), word processing (MS Word), spreadsheets (MS Excel), and presentation management (MS PowerPoint). It also explores Generative Artificial Intelligence (AI) and its practical applications across various industries. Designed for students without prior IT experience, the course emphasizes hands-on learning to develop practical skills. Students will gain an understanding of core concepts and learn to effectively use Generative AI tools. Key topics include crafting effective prompts, recognizing ethical considerations, and leveraging AI for creative problem-solving.

**Course Code: MTH 110**
**Course Title: Calculus I**
**Prerequisites: None**
**Course Description:**
Calculus is an exciting subject, justly considered to be one of the greatest achievements of the human intellect. Today calculus is used not just in the physical sciences, but also in engineering, business, economics, life sciences, and social sciences—any discipline that seeks to understand dynamic phenomena. Part of the aim of this course is to train the student to think logically. Learn to write the solutions of the exercises in a connected, step-by-step fashion with explanatory sentences—not just a string of disconnected equations or formulas. This course is intended to introduce derivatives, one of the two key concepts of calculus. The second is integral. Both key concepts depend on the notion of limit.

**Course Code: GEN302**
**Course Title: Fundamentals of Innovation, Entrepreneurship and Sustainability**
**Prerequisites: ENG 100**
**Course Description:**
This course seeks to prepare students how to apply core concepts regarding design thinking process, innovation, entrepreneurship and sustainability to organizations in the UAE. Students will learn how to connect entrepreneurship to the UAE community and economy and how as entrepreneurs can utilize design thinking and innovation to establish their start-up enterprises Design thinking, Entrepreneurship, and Growth and Leadership are three modules that will be covered throughout course delivery, study questions, videos, and projects.

**Course Code: GEN105A**

**Course Title: ثقافة المجتمع الإماراتي**
**Prerequisites: None**
**Course Description:**
يوفر هذا المقرر الدراسي المعلومات المناسبة والخاصة بالحياة الاجتماعية في دولة الإمارات العربية المتحدة. كما يغطي المقرر الدراسي الأحداث التاريخية والاقتصادية والسياسية المهمة التي شهدتها دولة الامارات العربية المتحدة منذ إعلان الاتحاد حتى الوقت الحاضر. إضافة لذلك فإن المقرر الدراسي يسلط الضوء على بعض الموضوعات المهمة حول حقوق الإنسان والتطورات الاقتصادية والسياسية والاجتماعية والثقافية التي شهدها المجتمع الإماراتي في نحوله إلى دولة حديثة. كما يتعرض المقرر الدراسي إلى أهم الإنجازات التي حققتها دولة الإمارات العربية المتحدة في مجال الفضاء والطاقة المستدامة.

**Course Code: GEN105**
**Course Title: Emirates Culture and Society**
**Prerequisites: Non**
**Course Description:**
This course introduces relevant information concerning the existing social life in the UAE. The course provides coverage of the important historical, social, economic and development events that have taken place since the era of the federation until present. The course also focuses on some important topics about human rights and other social developments that the UAE society has witnessed to become a modern state.

**Course Code: GEN103**
**Course Title: Critical Thinking**
**Prerequisites: ENG 100**
**Course Description:**
Critical Thinking is a course designed to help students develop their skills in reasoning, analysis, and the use of logical arguments. This course introduces students to the standards of critical thinking, nature of arguments, deductive and inductive reasoning, fallacious reasoning, role of language, critical analysis, and evaluation. The students are also introduced to the basic skills of good reasoning needed for the intelligent and responsible conduct of life. The course also includes the application of concepts in familiar areas and current issues, to help students develop practical and useful logical and critical thinking skills to understand and appreciate viewpoints which are different from their own.

**Course Code: GEN102A**
**Course Title: الثقافة الإسلامية**
**Prerequisites: None**
**Course Description:**
ما أن الباحثين لم يتفقوا على مفهوم محدد لمصطلح الثقافة الإسلامية إذ منهم من وسع دلالتها ومنهم من ضيقها، وبما أننا نعيش الحاضر فإنما يعنينا هو ما يشغل العالم الإسلامي اليوم من فكر وما يحتاجه المسلمون من فهم، إذ لابد من أن يتعرفوا على ما يمتلكه العالم الإسلامي من مكونات حضارية قوية ويجيبوا عن سبب تخلف العالم الإسلامي رغم أنهم يمتلكون تلك المكونات، فيتحدد العامل الأساسي وهو ضعف الفهم و التصور العقائدي والفكري مع إبراز مظاهره وآثاره، ثم يتم البحث عن سبل مقاومة الضعف بالانبعاث الإسلامي التربوي التعليمي والسياسي، والفهم الحقيقي لتلك المكونات ليكشف عن التحديات التي تواجه العالم الإسلامي داخليا وخارجيا كالعجز التعليمي، والتقني والعولمة ومحاربة هذه الثقافة من طرف قوى خارجية معادية للإسلام، مما أدى إلى تشويه صورة الثقافة الإسلامية ونعتها بانها ثقافة تنشر التطرف والعقلية المستبدة المتحجرة الرافضة لكل تطور وتغير. ويستخدم في هذا المساق المصادر الأولية القرآن والسنة، الكتب المنهجية، الروايات، الافلام، الانترنت

**Course Code: GEN102**
**Course Title: Islamic culture**
**Prerequisites: None**
**Course Description:**
This course introduces the students with various topics and issues concentrating on the frames, general trends and basic concept of Islamic Culture and Civilization. The principal topics include: the concept of Culture, its aspects and elements, history and origin of Islam, Islamic Aqidah, history of Islamic legislation, ethics in Islam and problems of anti-Islamic bias and stereotypes (extremism) its causes and remedies

**Course Code: GEN101**

**Course Title: مهارات الاتصال باللغة العربية (الطلاب غير العرب)**

**Prerequisites: None**
**Course Description:**
صمم هذا المساق ليكون للمستوى فوق المتوسط من الطلاب حيث يعتمد على المهارات اللغوية، التي صممت خصيصًا لتزويد فئات من الطلاب الناطقين بغير اللغة العربية بهدف تعزيز عملية التعلم بطريقة منهجية؛ ويستهدف المساق فئات الطلاب الذين يدرسون اللغة العربية كلغة ثانوية في المدرسة الثانوية أو الطلاب الذين لديهم والد واحد عربي. حيث سيقوم المساق بمعاونتهم أيضًا في التغلب على صعوبات التواصل في مكان العمل ومواقف الحياة اليومية. وستكون لغة الاتصال

في المساق هي اللغة العربية البسيطة والمعاصرة المستخدمة في وسائل الإعلام والمحادثات الرسمية والتعليم المدرسي والكلية، إلخ.

**Course Code: GEN100**

**Course Title: مهارات الاتصال باللغة العربية (الطلاب العرب)**

**Prerequisites: None**

**Course Description:**

أتت أهمية هذا المساق من المقولة الشهيرة "الانسان كائن اجتماعي "، التي تتيح للفرد الذي يجيدها الدخول في حركة المجتمع المحيط به بفاعلية أكثر وتأثير أوسع، كما أنها تمنح الطالب القدرة على القيادة، وامتلاك الرؤية والمشروع. من هنا جاءت فكرة هذا المساق لتساعد الطالب على امتلاك الأدوات الأساسية لمهارات الاتصال، استماعا، وتحدثا، وقراءة، وكتابة. كما تهدف هذه المادة الى إلمام الطالب بالمفاهيم والنظريات في مجال الاتصال الإنساني وإكسابه المهارات الأساسية في مجال التواصل مع الذات والآخرين وتعزيز ممارستها في حياته اليومية والعلمية والعملية باستخدام أساليب جدية تعتمد على التدريب والتقويم المتنوع والفعال.

**Course Code: GEN 304**

**Course Title: Ethics**

**Prerequisites: ENG200**

**Course Description:**

This course exposes students to core concepts, ideals and practical issues regarding professional ethics and moral behaviors. The history and development, ethical guidelines/principles and contemporary theories of the subject-matter will be the focus of the introductory chapter. Furthermore, discussions will concentrate on the relevance of Professional Ethics to modern workplaces and environments. Morality and liability, employees and moral choices, employers, and moral choices, are themes which will be covered throughout course delivery, exams and case studies.

**Course Code: GEN 304A**

**Course Title: الأخلاقيات**

**Prerequisites: None**

**Course Description:**

يبين المساق القيم الأخلاقية و مواثيق الشرف المنظمة للعمل الإعلامي بالإضافة إلي القوانين التي يخضع لها العاملون في مجال الإعلام وتطبيقاته. يركز المساق على تحديد حقوق وواجبات العاملين في مجال الإعلام في العصر الحديث. و يوضح الخصوصيات الثقافية للقيم الأخلاقية و نظريات أخلاقيات العمل ومصادرها. كما يستعرض تطور أخلاقيات الإعلام عبر التاريخ وقضايا حرية التعبير والمسؤولية الإجتماعية في التشريعات الإعلامية النافذة. و يتناول أيضاً مواضيع الخصوصية الشخصية، و صور الإنضباط والإلتزام الوظيفى، حقوق المؤلف، حق الوصول للمعلومات و الحفاظ على سريتها، حماية الصحفيين، كما يتعرض للقوانين والتشريعات الإعلامية المقارنة. ويصنف الأخلاقيات المطلوبة في استخدام الإنترنت بالشكل المثالي فى العمل.و كذلك يوضح المعالجة القانونية لجرائم الانترنت فى العالم ودولة الإمارات العربية المتحدة.

**Course Code: GEN201**

**Course Title: Psychology**

**Prerequisites: ENG100**

**Course Description:**

This course is capstone course that attempts to addresses the major theories, principles, and methodologies of psychology with special emphasis on their relations to human behavior. The biological foundations of behavior, sensory processes, learning, perception, memory, emotion, motivation, personality, and the social basis of behavior are examined**.**

**Course Code: ENG104**

**Course Title: English 2**

**Prerequisites: English1/ENG100**

**Course Description:**

This is a writing course that helps students become competent writers by engaging them in the writing process and by encouraging them to explore and organize their ideas in writing well-organized and developed paragraphs and essays. Students also study grammar, basic sentence structure and mechanics. Written and communication Skills will be developed and improved to prepare students for future careers.

**Course Code: ENG100**

**Course Title: English 1**

**Prerequisites: One of the English proficiency Tests (Emst, IELTS,TOEFL etc.)**

**Course Description:**

The course is designed for college students to benefit from an intensive skill-building curriculum that targets the main English skills. The focus of the course will be on reading and writing skill practice, grammar and structure application, and integration across the disciplines at the college-level. Students will be expected to successfully demonstrate and apply appropriate college-level reading and writing skills to a variety of assignments and assessments. Competences in contextualized reading and writing skills will be developed. Active reading and writing strategies will be learned through practice and application**.**

# COLLEGE OF BUSINESS

## Bachelor of Business Administration in Accounting

### Core Courses for Business Programs

**Course Code: BUS100**
**Course Title: Introduction to Management**
**Prerequisites: Non**
**Course Description:**
This course aims to introduce students with knowledge of the principles, functions and techniques of management to gain a solid background in business organization and management. Essential topics examined in this course include management functions, decision-making, motivation, communication. Special attention is paid to the cultural and regional context of business organizations. This course expected to serve as a foundation for other courses in business.

**Course Code: ACC106**
**Course Title: Accounting Principles 1**
**Prerequisites: Nil**
**Course Description:**
This course is an introduction to financial accounting methods such as recording and book- keeping in the journal, ledger, and trial balance in accordance with the International Financial Reporting Standards (IFRS). This course is designed to help students apply the appropriate accounting treatment for both adjusting and closing operations. It also helps students in recording business transactions of merchandising companies, calculating cost of inventories, and illustrating internal control and bank reconciliation statement.

**Course Code: MKT200**
**Course Title: Introduction to Marketing**
**Prerequisites: BUS 100**
**Course Description:**
This course introduces the students to basic marketing concepts and terminology and integrates learning material with real world examples. Areas covered include: the marketing concept, marketing mix, the marketing environment, marketing information and research, consumer behavior, pricing strategies and market segmentation

**Course Code: ACC200**
**Course Title: Accounting Principles 2**
**Prerequisites: ACC106**
**Course Description:**
This course introduces advanced accounting concepts to students, including different forms of ownership, cash flows statemen, financial analysis, accounting for manufacturing operations. The purpose of this course is to provide the students with the basis of accounting skills required in Business Administration to be used in the business environment for decision making.

**Course Code: HRM201**
**Course Title: Introduction to Human resource Management**
**Prerequisites: BUS100**
**Course Description:**
This course introduces various areas of human resource management including its strategic role, job analysis, training and development, HR planning and recruitment, employee selection, training and developing employees, performance management, strategic pay plans, employee relations, and employee safety & health in the workplace

**Course Code: BUS201**
**Course Title: Microeconomics**
**Prerequisites:**
**Course Description:**
This course is an introductory course in economic theory and applications. It will familiarize the students with the basic principles of microeconomics. Topics that will be covered include behavior of households and firms, consumption possibilities & preferences, production functions and market structures.

**Course Code: BUS203**
**Course Title: Organizational Behavior**
**Prerequisites: BUS100**
**Course Description:**
This course examines the complex relationships among individuals, groups, organizations, and society. It emphasizes a dynamic systems approach to understanding and facilitating work relationships through the study of the interaction of individual needs, abilities, and traits with organizational goals and structures. Some of the contemporary organizational issues included in this course are individual and group dynamics, motivation and performance, leadership, power, organizational culture, organizational change, and development.

**Course Code: BIT203**
**Course Title: Management Information Systems**
**Prerequisites: CIT100**
**Course Description:**
This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements

**Course Code: MTH203**
**Course Title: Business Statistics**
**Prerequisites: MTH105**
**Course Description:**
This course will introduce the learner to some techniques in descriptive and inferential statistics. Topics included are data presentation using different tools, central measures, dispersion measures, introduction to probability, estimation, hypothesis testing, correlation and regression, and computer applications.

**Course Code: BUS301**
**Course Title: Macroeconomics**
**Prerequisites: BUS201**
**Course Description:**
This course provides an understanding of the role and methodology of economics, components of the economy, roles of government and central bank in the economy through fiscal policy, monetary policy, and system. This course also covers macroeconomic indicators (GDP, Inflation, and Unemployment), economic growth and the business cycle.

**Course Code: BAF301**
**Course Title: Introduction to Financial Management**
**Prerequisites: ACC106**
**Course Description:**
This course is prepared to equip students with the fundamentals of financial management. It includes an overview of financial management, analysis of financial Statement, time value of money, risk and return, working capital management, financial statement analysis, sources of finance, and capital budgeting.

**Course Code: BUS306**
**Course Title: Quantitative Business Analysis**
**Prerequisites: MTH203**
**Course Description:**
This course provides a comprehensive survey of the main quantitative business techniques used in business analysis and decision making, in particular the application of mathematical and statistical models in the analysis of problems related to economic and administrative sciences. The main topic includes decision making analysis under uncertainty, regression analysis and hypothesis testing, forecasting techniques, linear programming models and network analysis.

**Course Code: BUS307**
**Course Title: Research Methods**
**Prerequisites: BUS306**
**Course Description:**

The course is designed to introduce students to qualitative and quantitative research methods, as well as commonly used statistical procedures in data analysis. Topics covered include the role of business research, scientific inquiry, the research process, proposal development, research design, hypothesis testing, primary and secondary data collection, statistical data analysis and presentation of research reports. The ethical issues of research design and data interpretation will also be discussed.

**Course Code: BUS309**
**Course Title: Operations Management**
**Prerequisites: BUS306**
**Course Description:**
This course provides a foundation in fundamental concepts, techniques and applications of contemporary production and operations management to serve as tools for improving quality, productivity and international competitiveness. It covers a selection of quantitative tools and techniques to aid in decision making and operations management setting. Topics such as forecasting, product and service development, capacity planning, process selection, facility planning, quality management and inventory management will be introduced. The concepts for designing, planning and improving manufacturing and service organizations will also be examined.

**Course Code: BUS409**
**Course Title: Strategic Management**
**Prerequisites: BUS417**
**Course Description:**
This course is capstone course that attempts to addresses the main areas of strategic management process and assessment of how company's strategy interacts with and guides within its external and internal environments. The focus of the course is on business unit and corporate-level strategy, strategy formulating, strategy implementation, and covering the overall strategic management process. Also, it examines how organizations can sustain competitive advantage and how corporate strategies can be implemented successfully.
The course covers strategic implementation as its relation to strategic leadership, organizational structure, and culture. Case analyses and text material are employed to integrate student's knowledge and improve strategic thinking skills

**Course Code: BUS417**
**Course Title: International Business Management**
**Prerequisites: MKT 200 + BUS 301**
**Course Description:**
This course is capstone course that attempts to addresses the main areas of strategic management process and assessment of how company's strategy interacts with and guides within its external and internal environments. The focus of the course is on business unit and corporate-level strategy, strategy formulating, strategy implementation, and covering
the overall strategic management process. Also, it examines how organizations can sustain competitive advantage and how corporate strategies can be implemented successfully.
The course covers strategic implementation as its relation to strategic leadership, organizational structure, and culture. Case analyses and text material are employed to integrate student's knowledge and improve strategic thinking skills.

## Major Courses

**Course Code: ACC301**
**Course Title: Intermediate Accounting 1**
**Prerequisites: ACC106**
**Course Description:**
The main purpose of this course is to enhance the student's knowledge of accounting concepts at a more advanced level. The emphasis is on the application of more advanced principles and alternative methods rather than routine accounting procedures. This course covers the underlying principles, procedures, and reporting requirements necessary to gain an understanding of both the preparation and the use of detailed financial statements. Topics include: the conceptual framework of financial accounting; financial statements preparation including the classified statement of financial position, the multiple-step income statement, and the statement of cash flows under IFRS considerations; as well as key issues related to the valuation and recording of cash, receivables, inventories, and plant assets.

**Course Code: ACC303**
**Course Title: Accounting Information Systems**
**Prerequisites: ACC106**
**Course Description:**
The purpose of this course is to provide students with analytical tools necessary to design, implement, maintain, and assess an accounting information system to support business processes and cycles. This course focuses on the use of information systems in the accounting process with an emphasis on computer systems, internal controls, fraud and ethics. Major topics also include the conception of dataflow diagrams, revenue, expenditure, production cycles and the extensible Business Reporting Language XBRL.

**Course Code: ACC305**
**Course Title: Governmental Accounting**
**Prerequisites: ACC200**
**Course Description:**
This course introduces students to characteristics and objectives financial reporting of governmental entities. It includes the principles of accounting and financial reporting for estate and local governments. It also consists of providing an overview of governmental operating statement and budgetary accounting system. The course helps students in preparing journal entries for transactions, capital projects and long-term liabilities as well as preparing government wide-financial statements and fund financial statements. The course presents principles, procedures, and disclosures applicable to UAE public sector organizations.

**Course Code: BAF305**
**Course Title: Corporate Finance**
**Prerequisites: BAF301**
**Course Description:**
This course is prepared to equip students with Introduction to Corporate Finance, the role of the financial manager, net Present Value and Investments, Risk, Return and Opportunity Costs, Capital Budgeting Analysis, Market Efficiency, Corporate Financing include Patterns of corporate financing, Debt and equity issuance, Private placements, Payout policies, Dividends, Stock repurchases, Deciding on a payout policy.

**Course Code: ACC307**
**Course Title: Intermediate Accounting 2**
**Prerequisites: ACC 301**
**Course Description:**
This course is a continuation of Intermediate Accounting1, and is a closer look at the theories, principles and practices underlying financial statements. Emphasis is on the measurement, valuation and reporting of liabilities and stockholders' equity and their effect on reported earnings. Topics covered include current and long-term liabilities, stockholders' equity and retained earnings, dilutive securities, and earnings per share (EPS), investments, revenue recognition, leases, accounting changes and errors analysis and presentation and disclosure in financial reporting.

**Course Code: ACC310**
**Course Title: Taxation**
**Prerequisites: ACC200**
**Course Description:**
This course is an introduction to taxation with an emphasis on individuals and business entities. Topics include tax planning, elements of individual and business income tax and taxation in the UAE (VAT and corporate tax). It also consists of determining income, exclusions, deductions and computations of individuals and business income tax and tax credits. This course is designed to help students apply the appropriate tax

accounting methods both tax consequences related with purchasing of assets, property dispositions and depreciation methods. Emphasis will be placed on transfer tax and wealth planning. The course provides insight of international taxation models of GCC, UK and USA.

**Course Code: ACC401**
**Course Title: Managerial Accounting**
**Prerequisites: ACC200**
**Course Description:**

This course is designed to expose students to the theory and practice of selecting and analyzing managerial and financial accounting information for internal use by managers for decision-making, planning, directing, and controlling purposes. Major topics include managerial accounting concepts, cost behavior, cost analysis, budgeting and profit planning, cost-volume profit analysis, measurement, and analysis of accounting data appropriate to managerial decision making, capital budgeting decision.

**Course Code: ACC 403**
**Course Title: Cost Accounting**
**Prerequisites: ACC200**
**Course Description:**

This course exposes students to the basic concepts and practice of cost accounting System and their terminology with an emphasis on types of costs. It includes job order and process costing systems. It also introduces an overview of activity-based costing method. The course helps students in preparing flexible budget and variance analysis. The course presents the fundamental features of capacity analysis and inventory costing system.

**Course Code: ACC405**
**Course Title: Auditing**
**Prerequisites: ACC 301**
**Course Description:**

This course is designed to provide the student with a basic understanding of all aspects of auditing. These include accepting and planning the audit, evaluating internal controls, verifying account balances and financial statement assertions, reporting on audited financial statements, as well as auditing standards, professional and personal ethical responsibilities of auditors.

**Course Code: ACC413**
**Course Title: Advanced Accounting**
**Prerequisites: ACC307**
**Course Description:**

The aim of this course is to critically examine advanced issues in financial accounting for business combinations, including the equity method of accounting for investments, consolidation of financial statements, intercompany transactions, and other related issues. The course also include accounting for partnerships, including formation, operations, termination, and liquidation.

**Course Code: ACC415**
**Course Title: Graduation Project**
**Prerequisites: After completing 99 CH + BUS307**
**Course Description:**

This course provides an opportunity for students to employ academic tools and analysis techniques to research a project that is directly relevant to their majors and their future career. This course can be offered as a 3-credit hour course for students who wish to pursue only the classroom portion of this course and a 6-credit hour course for those who wish to combine research with an internship. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress and receive feedback. Students may work individually or in teams and must deliver a case study or paper at the end of the course.

**Course Code: ACC419**
**Course Title: Internship**
**Prerequisites: After Completing 99 Credit hours**
**Course Description:**

The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa College.

## Elective Courses

**Course Code: BAF307**
**Course Title: Investment**
**Prerequisites: BAF301**
**Course Description:**

This course is an introduction to the fundamental principles of investment management. The course focuses on risk and return analysis across different securities as well as performance evaluation, style analysis, and the behavior of money management professionals in the investment industry. Topics covered include portfolio theory and diversification, mean variance analysis, the efficient market hypothesis and capital asset pricing models.

**Course Code:BAF311**
**Course Title: Risk Management & Insurance**
**Prerequisites: BAF301**
**Course Description:**

This course provides an introduction to the field of risk management and insurance. Topics covered include public and private insurers, insurance contracts, insurer operations, insurance markets and the global insurance industry, as well as life and health risk management and insurance, personal property and liability risk management and insurance and commercial liability risk management and insurance.

**Course Code: BUS311**
**Course Title: Cross Cultural Management**
**Prerequisites: BUS203**
**Course Description:**

This course provides an overview of international organizational behavior and human resource issues and practices in multi-national organizations. Topics covered include understanding the effects of culture on attitudes and behavior, organizational issues such as structures, systems and technology, and human resource issues such as teamwork, leadership and negotiation, as well as different approaches for effective cross-cultural management.

**Course Code: HRM303**
**Course Title: Training and Development**
**Prerequisites: HRM 201**
**Course Description:**

This course introduces the design, delivery and assessment of training programs in businesses and other organizations. Practical importance is placed on the development of training programs and evaluation instruments, as well as on the use of effective instructional methods to deliver these programs with emphasis on applying learning theories to the training function.

# Bachelor of Business Administration in Business Information Technology

## Major Courses

**Course Code BIT201**
**Course Title Introduction to Computer Programming**
**Prerequisites CIT100**
**Course Description:**

Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures,

loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code BIT205**
**Course Title: Object-Oriented Programming**
**Prerequisites BIT201**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code: BIT207**
**Course Title: Introduction to Web Development**
**Prerequisites: CIT100**
**Course Description:**
This course is an introduction to Web Development using HTML language. It covers the following elements: Hypertext Markup Language (HTML), Cascading Style Sheets for creating web-formed Web pages that are compliant with current Web standards and how to publish students' Web sites. In addition, this course covers the application of JavaScript and DHTML as client-side programming. Students will learn the best practices for sustainable web design, such as optimizing images and scripts, minimizing resource usage, and ensuring accessibility and usability.

**Course Code: BUS302**
**Course Title: e-Business**
**Prerequisites: BIT203**
**Course Description:**
this course develops the student's understanding of basic principles of e-business and ecommerce management, functions, technologies, and goals. The course covers e-business models, strategies, and applications with the explanation of most computer jargon and
terminology relevant to e-commerce.

**Course Code BIT305**
**Course Title: Database Management Systems**
**PrerequisitesCIT100**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code BIT405**
**Course Title: Business Intelligence**
**PrerequisitesBIT305**
**Course Description:**
This course illustrates the applicability of Business Intelligence (BI) in the development of successful business models. It investigates the role of data mining for BI in an organization. Students will first learn appropriate tools and techniques for data pre-processing and data exploration. Then, they will explore and apply some supervised and unsupervised data mining techniques to create valuable strategies and make wiser business decisions.

**Course Code: BIT407**
**Course Title: Object-Oriented Systems Analysis and Design**
**Prerequisites: BIT205**
**Course Description:**
This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.

**Course Code BIT413**
**Course Title: Data Communication and Networking**
**Prerequisites: CIT100**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.

**Course Code: BIT415**
**Course Title: Graduation Project**
**Prerequisites: After Completing 99 Credit Hours + BIT407**
**Course Description:**
This course offers students a unique opportunity to apply their learning about business technology and the entire software development lifecycle, from business needs to deployment. It amplifies classroom instruction about IT project planning and implementation. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress and receive feedback. Students may work individually or in teams and must deliver a complete product (Application, website, planning designs, etc.) at the end of the course.

**Course Code: BIT430**
**Course Title: Information Security**
**Prerequisites BIT413**
**Course Description:**
This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.

**Course Code: BIT417**
**Course Title: Advanced Web Development**
**Prerequisites: BIT207**
**Course Description:**
This course provides practical knowledge for designing and developing web-based applications using modern web

development techniques. It focuses on HTML, CSS, and dynamic web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.

**Course Code: BIT422**
**Course Title: Advanced Database Management System**
**Prerequisites BIT305**
**Course Description:**
This course provides an in-depth exploration of sustainable database design and application development. It covers the implementation of both basic and advanced SQL queries optimized for efficiency and performance. The course emphasizes the development of database applications using PL/SQL and the creation of essential database objects, including views, triggers, procedures, functions, and packages. Key database management system (DBMS) concepts such as transaction processing, concurrency control, and recovery are explored to ensure data integrity, consistency, and reliability. Additionally, the design and development of user-friendly graphical interfaces using forms and reports are covered.

**Course Code: BIT419**
**Course Title: Internship**
**Prerequisites: After completion of 99 CHs**
**Course Description:**
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University.

## Elective Courses

**Course Code: BUS421**
**Course Title: Entrepreneurship and Small Business Management**
**Prerequisites: BUS 203**
**Course Description:**
This course provides an overview of critical issues faced in small business and entrepreneurship. This includes an overview of how strategic planning, operations, human resources and financial management issues are related to small business and entrepreneurs. This course also provides the student with a broad understanding of the basic issues in modern operations management in both manufacturing and service organizations. It focuses on the development of a strategic business plan and competitive business model for a small business or entrepreneurial venture. Special emphasis is placed on adapting business skills to the realistic needs of a small business owner and entrepreneur.

**Course Code: BAF403**
**Course Title: Financial Institutions & Markets**
**Prerequisites: BAF301**
**Course Description:**
This course provides the learner with an overview on the operation of the financial system within the framework of modern economic and finance theory. It focuses on financial institutions and their role in financial intermediation, financial instruments, and pricing in primary and secondary, stock markets. It also focuses on the share price analysis in global markets and forward and future markets in financial risk management.

**Course Code: MKT301**
**Course Title: Consumer Behavior**
**Prerequisites: MKT200**
**Course Description:**
This course is an introduction to the world of consumer behavior. The discipline derives from several social sciences including psychology, sociology, and marketing to explain the behavior of the customer in the marketplace. In this course, the student will understand how personality, perceptions, learning, and attitudes affect consumption behavior. Additionally, to explore how consumption changes during one's life cycle, and how powerful cultural and subcultural influences are on consumers.

**Course Code: BUS411**
**Course Title: Change Management**
**Prerequisites: BUS203**
**Course Description:**
This course introduces an overview of change situations, and the issues and methods associated with the management of change. The topics covered include identifying the need for change, planning and communicating change, strategies for implementing change, and overcoming resistance to change. Students will also examine the role of leadership and the competencies and skills required of individuals who initiate, manage, and are affected by change.

# BBA in Tourism and Hospitality Management

## Major Courses

**Course Code: THM 301**
**Course Title: Introduction to Hospitality Management**
**Prerequisites: BUS100**
**Course Description:**
The course focuses on hospitality operations while offering a broad, comprehensive view of Hospitality Industry. It provides an understanding of hospitality and Tourism industry major aspects and its operational aspects. The course is structured in areas of Hospitality and lodging, Tourism attractions, Recreations, and Events and its operations. The purpose of the course is to enable students explore the workings of hospitality segment, including hospitality and lodging; beverages, restaurants, and managed services; tourism, recreation, attractions, clubs, and gaming; assemblies, events, and attractions; and managerial areas of the hospitality industry.

**Course Code: THM 302**
**Course Title: Tourism Management and Development**
**Prerequisites: BUS100**
**Course Description:**
The course traces the history and evolution of tourism concerning the changing tourism demand and travel motivations over some time. The course also provides valuable information on tourism sector components and linkages with accommodation, transportation, and tour operators. Special focus is laid on visitor attractions and events. As a foundation course, this course introduces participants to the fundamentals of tourism with a global focus. The students will be enlightened on the need of developing and managing tourism with a focus on the role of the private and public sectors in effectively managing the resources.

**Course Code: THM 311**
**Course Title: Tourism and hospitality marketing**
**Prerequisites: THM301+ MKT200**
**Course Description:**
The goal of the course is to help students comprehend marketing management from a tourism perspective. The course focuses on the methods and techniques through which tourism organizations examine and evaluate marketing trends. The course also covers defining and choosing target markets, planning and executing marketing strategies, and implementing marketing control plans. Students will develop the skills to analyze and address marketing challenges and opportunities in tourism products, services, and destinations. They will also understand the components that make tourism marketing successful and gain both the theoretical and practical skills necessary for success.

**Course Code: THM400**

**Course Title: Business Economics in Tourism and Hospitality**
**Prerequisites: Microeconomics (BUS201)**
**Course Description**:
This course provides necessary skills and knowledge of Business Economics in Tourism and Hospitality through a comprehensive analysis of the market forces, demand and supply, firm behavior & strategy, and transaction and institution.
**Course Code: THM401**
**Course Title: Event management**
**Prerequisites: BUS100**
**Course Description:**
The purpose of the course is to make students understand the significance of events in developing and promoting tourism. This course focuses on the theories and practices of conceiving and organizing successful events. The course contents include event design and management, outcomes, event experiences and their associated meanings, dynamic processes shaping events, and why people attend them. The course introduces the functional and operational aspects of event management, emphasizing cultural and heritage events and sustainability. They will learn how to derive tourism potential of a destination through events and festivals.
**Course Code: THM410**
**Course Title: Operation Planning and Scheduling**
**Prerequisites: BUS309**
**Course Description:**
This course equips students with essential skills, and techniques for the operation management in the service industry with an emphasis of hospitability industry. The course is designed to provide knowledge regarding the structure of decision-making and organizational management of a service with an emphasis on technical methods in forecasting, inventory management, material requirement planning and operations scheduling. The purpose of the course is to develop the ability to apply analytical and managerial methods for the management of a service. It includes techniques based on forecasting, supply chain, organization and MRP applications, quality evaluation and continuous improvement methods. The student will be able to manage, evaluate and monitor different aspects of the service industry.
**Course Code: THM411**
**Course Title: Information Technology in Tourism**
**Prerequisites: BIT100**
**Course Description:**
The course examines the challenges of using information technology in the tourism business. The contents cover IT applications in various industries, such as airlines, travel intermediates, lodging, food service, destinations, attractions, events, and entertainment. With the help of examples and cases, the course examines how travelers use technology for decision-making before, during, and after their trip. This course aims to offer thorough range of important trends, opportunities, and issues in hotel and travel information technology. The students will have the chance to learn about novel topics like big data, robotics, crowdsourcing for sustainability, intelligent destinations, disruptive innovation, and augmented and virtual reality.
**Course Code: THM412**
**Course Title: Tour Leadership and Management**
**Prerequisites: THM302+ BUS100**
**Course Description:**
The course aims to equip students with relevant knowledge and skills, enabling them to perform functions and operations of tour management successfully. The students will learn the essentials of tour management, including pre-tour, on-tour, and post-tour operations. The course will follow a practice-oriented approach focusing on tour management and guiding, such as planning tour itineraries, handling large groups manage cultural differences, grievances, emergencies, and such. The contents will also cover a tour manager's responsibilities towards tourists, destinations, and other tourism stakeholders.
**Course Code: THM415**
**Course Title: Graduation Project**
**Prerequisites: After completing 99 CH + BUS307**
**Course Description:**
This course provides an opportunity for students to employ academic tools and analysis techniques to research a project that is directly relevant to their majors and their future career. This course can be offered as a 3-credit hour course for students who wish to pursue only the classroom portion of this course and a 6-credit hour course for those who wish to combine research with an internship. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress and receive feedback. Students may work individually or in teams and must deliver a case study or paper at the end of the course.
**Course Code: THM419**
**Course Title: Internship**
**Prerequisites: After Completing 99 Credit hours**
**Course Description:**
The course consists of 200 hours of work in a private or public organization. The student may select to have his/her internship in any area of business administration or information technology. The choice of workplace is subject to the approval of LCT.
**Course Code: THM421**
**Course Title: Financial Accounting in Hospitality**
**Prerequisites: BAF301**
**Course Description:**
This course demonstrates and explains the significance of financial management aspects within the hotel and tourism businesses and provides many examples and is mainly based on practical implementation more than the theoretical aspects. The main purpose for this course is to discuss the following: The concept of Relationship Between Return and Risk; the concept of purchasing power of money and time value of money; Financial assets with Fixed Income such as preferred stock & bonds; Common equity; Cost of Capital; Capital Budgeting and Cash Flow Estimation and Capital Budgeting Decision approaches for those in hotel and tourism professions.
**Course Code: THM422**
**Course Title: Managing sustainable tourism**
**Prerequisites: BUS306+ THM301**
**Course Description:**
The purpose of the course is to introduce students to a range of crucial topics such as mass tourism, alternative tourism, human capital management, and sustainable development. The course bridges the gap between theoretical perspectives of sustainable tourism and their application in the commercial and non-commercial arena; this course facilitates comprehensive learning of sustainable tourism development. The course provides a comprehensive introduction to sustainable tourism, crucially combining theoretical and practical approaches to successfully equip students with the tools to manage a sustainable tourism business or destination.

## Elective Courses

**Course Code: MKT301**
**Course Title: Consumer Behavior**
**Prerequisites: MKT200**
**Course Description:**
This course is an introduction to the world of consumer behavior. The discipline derives from several social sciences including psychology, sociology, and marketing to explain the behavior of the customer in the marketplace. In this course, the student will understand how personality, perceptions, learning, and attitudes affect consumption behavior. Additionally, to explore how consumption changes during one's life cycle, and how powerful

cultural and subcultural influences are on consumers.

**Course Code: BUS302**
**Course Title: E-Business**
**Prerequisites: BIT203**
**Course Description:**
This course develops the student's understanding of basic principles of e-business and e-commerce management, functions, technologies, and goals. The course covers e-business models, strategies, and applications with the explanation of most computer jargon and terminology relevant to e-commerce.

**Course Code: BUS407**
**Course Title: Project Management**
**Prerequisites: BUS306**
**Course Description:**
This course represents a deep comprehensive study of operations and activities of project and the means and methods to manage a project department in an any fields specially constructions. This course contains an overview of project functions and activities with a study of the different projects types and problem-solving methods of maintenance issues, including Design, Analysis, Evaluation and Control tools for Project Management.

## Bachelor of Business Administration in Industrial Management

### Major Courses

**Course Code: BIM 200**
**Course Title: Linear Algebra**
**Prerequisites: MTH 105**
**Course Description:**
This course is an introduction to Linear Algebra and some of its applications. The aim is to teach the fundamentals of linear algebra in a way that illustrates their relevance to business mathematics applications. An Introduction to Matrices and Systems of Linear Equations are given with other topics such as Determinants, Linear Transformations, Eigenvectors and Eigen values. Techniques and application of business mathematics of linear algebra for finance sciences, management, and economics.

**Course Code: BIM 303**
**Course Title: Optimizing and Modeling**
**Prerequisites: MTH 203**
**Course Description:**
This course introduces concepts and techniques of operations research and management science for the modeling and solution of business decision problems. It gives broad coverage to the formulation of optimization models. The models specifically covered are integer programming, Markov chain, queuing theories, optimization algorithms. Emphasis is placed on the process of analyzing business scenarios and formulating models that address appropriate business decision problems.

**Course Code: BIM 401**
**Course Title: Logistics & Supply Chain Management**
**Prerequisites: BUS 306**
**Course Description:**
This subject is a survey of the fundamental analytic tools, approaches, and techniques which are useful in the design and operation of logistics systems and integrated supply chains. The material is taught from a managerial perspective, with an emphasis on where and how specific tools can be used to improve the overall performance and reduce the total cost of a supply chain. We place a strong emphasis on the development and use of fundamental models to illustrate the underlying concepts involved in both intra and inter-company logistics operations.

**Course Code: BIM 402**
**Course Title: Lean Management & Six Sigma**
**Prerequisites: BUS309**
**Course Description:**
This course will provide the student with an introduction to lean production describing the background behind its development and how evaluations and assessments of production systems are performed. Lean production tools and techniques will be described and, in some cases, demonstrated in simulation exercises. Examples of applications in manufacturing and business processes will be presented.

**Course Code: BIM 403**
**Course Title: Enterprise Resource Planning (ERP) Systems**
**Prerequisites: BIT 203**
**Course Description:**
This course will introduce students to enterprise systems and show how organizations use enterprise systems to run their operations more efficiently and effectively. They will learn about the critical success factors and implementation strategies that lead to enterprise system success, and about the informational, knowledge, and decision-making opportunities afforded by enterprise systems.
The course will examine typical Enterprise Systems modules: materials management, supply chain management, customer relationship management, financials, projects and human resource management. Enterprise systems use a single database to integrate business transactions along and between processes, leading to benefits such as efficient and error-free workflows plus accounting, management reporting and improved decision making. The course will incorporate a laboratory component using SAP software.

**Course Code: BIM 410**
**Course Title: Decision Science**
**Prerequisites: BIM 303**
**Course Description:**
This course deals with decision making within a managerial context. It encompasses several systematic approaches to making decisions in problems often encountered by managers. In today's business world, problems are too complex to rely simply on intuition and common sense. Quantitative decision tools such as management science and statistics allow decision makers to base decisions on data-driven and scientific methods. This course prepares students to describe, gather and analyze business data, and to use statistical and management science tools to make effective business decisions in operations, finance, marketing, management, and new product development.

**Course Code: BIM 412**
**Course Title: Risk Management**
**Prerequisites: BUS 306**
**Course Description:**
This course will examine the way in which business and society make an assessment of control and transfer risk. It is designed for the student with no previous knowledge of risk management. The goal of this course is to engage students in active discovery of risk management principles. Students will be prepared to function in a business environment, developing an awareness of the challenges, the tools, and the process of designing and implementing a risk management program.

**Course Code: BIM 415**
**Course Title: Graduation Project**
**Prerequisites: After completing 99 CHs + BUS 307**
**Course Description:**
This course provides an opportunity for students to employ academic tools and analysis techniques to research a project that is directly relevant to their majors and their future career. This course can be offered as a 3-credit hour course for students who wish to pursue only the classroom portion of this course and a 6-credit hour course for those who wish to combine research with an internship. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress and receive feedback. Students may work individually or in

teams and must deliver a case study or paper at the end of the course.

**Course Code: BIM 419**
**Course Title: Internship**
**Prerequisites: After completion of 99 CHs**
**Course Description:**
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University.

**Course Code: BIM 301**
**Course Title: Maintenance Management**
**Prerequisites: BUS 100**
**Course Description:**
This course represents a deep comprehensive study of operations and activities of maintenance and the means and methods to manage a maintenance department in an industrial plant. This course contains an overview of maintenance functions and activities with a study of the different maintenance types and problem-solving methods of maintenance issues, including Design, Analysis, Evaluation and Control tools for Maintenance Management.

**Course Code: BIM 302**
**Course Title: Operations Planning and Scheduling**
**Prerequisites: BUS 306**
**Course Description:**
This course introduces the functional area of production and operations management as practiced in manufacturing industries and the services sector. It includes decision-making, just-in-time systems, forecasting, aggregate planning, inventory management, materials requirements planning (MRP), and operations scheduling.

**Course Code: BUS401**
**Course Title: Quality Management**
**Prerequisites: BUS309**
**Course Description:**
This course is designed to provide students with an understanding of the principles, concepts, processes and procedures pertaining to the issue of total quality management. Topics covered include: the origins of the modern day quality movement, the philosophies and practices that serve as the theoretical knowledge for planning and implementing a total quality management (TQM) program, the principles that make up TQM, the implications and benefits of introducing TQM into an organization, and the tools and techniques that could be used to support an ongoing TQM program.

**Course Code: BUS407**
**Course Title: Project Management**
**Prerequisites: BUS306**
**Course Description:**
This course represents a deep comprehensive study of operations and activities of project and the means and methods to manage a project department in an any fields specially constructions. This course contains an overview of project functions and activities with a study of the different projects types and problem-solving methods of maintenance issues, including Design, Analysis, Evaluation and Control tools for Project Management.

# Bachelor of Business Administration in Management

## Major Courses

**Course Code: BUS302**
**Course Title: E-Business**
**Prerequisites: BIT203**
**Course Description:**
This course develops the student's understanding of basic principles of e-business and e-commerce management, functions, technologies, and goals. The course covers e-business models, strategies, and applications with the explanation of most computer jargon and terminology relevant to e-commerce.

**Course Code: BUS305**
**Course Title: Business Law**
**Prerequisites: BUS100 + GEN304**
**Course Description:**
This course provides a high-level overview of key business-related legal issues. Subjects covered include legal terminology and concepts, the elements of contracts, intellectual property law, employment law, and the legal relationships between buyers and sellers. In addition, there will be a focus on how these issues apply in the context of the legal environment in the UAE.

**Course Code: BUS311**
**Course Title: Cross Cultural Management**
**Prerequisites: BUS203**
**Course Description:**
This course provides an overview of international organizational behavior and human resource issues and practices in multi-national organizations. Topics covered include understanding the effects of culture on attitudes and behavior, organizational issues such as structures, systems and technology, and human resource issues such as teamwork, leadership and negotiation, as well as different approaches for effective cross-cultural management.

**Course Code: BUS413**
**Course Title: Leadership**
**Prerequisites: BUS203**
**Course Description:**
This course provides the basis for understanding what leadership is and what leaders do to be successful. This course will look at how successful leaders develop a vision for the future, align other behind their vision, and motivate them to achieve the vision. This course will review theories of leadership and analyze common strategies used by leaders, both effective and ineffective, as well as address moral and ethical responsibility of leadership.

**Course Code: BUS401**
**Course Title: Quality Management**
**Prerequisites: BUS100**
**Course Description:**
This course is designed to provide students with an understanding of the principles, concepts, processes and procedures pertaining to the issue of total quality management. Topics covered include: the origins of the modern day quality movement, the philosophies and practices that serve as the theoretical knowledge for planning and implementing a total quality management (TQM) program, the principles that make up TQM, the implications and benefits of introducing TQM into an organization, and the tools and techniques that could be used to support an ongoing TQM program

**Course Code: BUS407**
**Course Title: Project Management**
**Prerequisites: BUS306**
**Course Description:**
This course is designed to provide students with an understanding of the principles, concepts, processes and procedures pertaining to the issue of total quality management. Topics covered include: the origins of the modern day quality movement, the philosophies and practices that serve as the theoretical knowledge for planning and implementing a total quality management (PM) program, the principles that make up PM, the implications and benefits of introducing PM into an organization, and the tools and techniques that could be used to support an ongoing PM program.

**Course Code:BUS415**
**Course Title: Graduation Project**
**Prerequisites: After Completing 99 Credit Hours + BUS307**
**Course Description:**

This course provides an opportunity for students to employ the academic tools and analysis techniques to research a project that is directly relevant to their majors and their future career. This course can be offered as a 3 credit hour course for students who wish to pursue only the classroom portion of this course and a 6 credit hour course for those who wish to combine research with an internship. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress, and receive feedback. Students may work individually or in teams and must deliver a case study or paper at the end of the course.

**Course Code: BUS421**
**Course Title: Entrepreneurship and Small Business Management**
**Prerequisites: BUS203**
**Course Description:**
This course introduces an overview of critical issues faced in small business and entrepreneurship. This includes an overview of how strategic planning, operations, human resources and financial management issues are related to small businesses and entrepreneurs. This course also provides the student with a broad understanding of the basic issues in modern operations management in both manufacturing and service organizations. It focuses on the development of a strategic business plan and competitive business model for a small business or entrepreneurial venture. Special emphasis is placed on adapting business skills to the realistic needs of a small business owner and entrepreneur.

**Course Code: BUS411**
**Course Title: Change Management**
**Prerequisites: BUS203**
**Course Description:**
This course introduces an overview of change situations, and the issues and methods associated with the management of change. The topics covered include identifying the need for change, planning and communicating change, strategies for implementing change, and overcoming resistance to change. Students will also examine the role of leadership and the competencies and skills required of individuals who initiate, manage, and are affected by change.

**Course Code: MKT301**
**Course Title: Consumer Behavior**
**Prerequisites: MKT200**
**Course Description:**
This course is an introduction to the world of consumer behavior. The discipline derives from several social sciences including psychology, sociology, and marketing to explain the behavior of the customer in the marketplace. In this course, the student will understand how personality, perceptions, learning, and attitudes affect consumption behavior. Additionally, to explore how consumption changes during one's life cycle, and how powerful cultural and subcultural influences are on consumers.

**Course Code: BAF403**
**Course Title: Financial Institutions and Markets**
**Prerequisites: BAF301**
**Course Description:**
This course provides the learner with an overview on the operation of the financial system within the framework of modern economic and finance theory. It focuses on financial institutions and their role in financial intermediation, financial instruments, and pricing in primary and secondary, stock markets. It also focuses on the share price analysis in global markets and forward and future markets in financial risk management.

**Course Code: HRM303**
**Course Title: Training and Development**
**Prerequisites: HRM 201**
**Course Description:**
This course introduces the design, delivery and assessment of training programs in businesses and other organizations. Practical importance is placed on the development of training programs and evaluation instruments, as well as on the use of effective instructional methods to deliver these programs with emphasis on applying learning theories to the training function.

**Course Code: BUS419**
**Course Title: Internship**
**Prerequisites: After Completing 99 Credit Hours**
**Course Description:**
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University.

## Elective Courses

**Course Code: BIT413**
**Course Title: Data Communication and Networking**
**Prerequisites:CIT100**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks

**Course Code: ACC401**
**Course Title: Managerial Accounting**
**Prerequisites: ACC200**
**Course Description:**
This course is designed to expose students to the theory and practice of selecting and analyzing managerial and financial accounting information for internal use by managers for decision-making, planning, directing, and controlling purposes. Major topics include managerial accounting concepts, cost behavior, cost analysis, budgeting and profit planning, cost-volume profit analysis, measurement, and analysis of accounting data appropriate to managerial decision making, capital budgeting decision.

**Course Code: HRM301**
**Course Title: Recruitment and Selection**
**Prerequisites: HRM201**
**Course Description:**
This is a core course discussing various areas of HR Planning and Recruitment including job analysis and recruitment, recruitment in labor markets, legal and ethical considerations in recruitment, managing diversity & equal employment, selecting and placing human resources, interviewing, employee testing, retention of employees, compensation and employee performance. Attention is given to some specific topics from these areas so more crucial concepts/methods may be dealt with in-depth.

**Course Code: BAF305**
**Course Title: Corporate Finance**
**Prerequisites: BAF301**
**Course Description:**
This course is prepared to equip students with Introduction to Corporate Finance, the role of the financial manager, net Present Value and Investments, Risk, Return and Opportunity Costs, Capital Budgeting Analysis, Market Efficiency, Corporate Financing include Patterns of corporate financing, Debt and equity issuance, Private placements, Payout policies, Dividends, Stock repurchases, Deciding on a payout policy.

# Bachelor of Business Administration in Human Resource Management

## Major Courses

**Course Code: HRM301**
**Course Title: Recruitment and Selection**
**Prerequisites: HRM201**
**Course Description:**
This is a core course discussing various areas of HR Planning and Recruitment including job analysis and recruitment, recruitment in labor markets, legal and ethical considerations in recruitment, managing diversity & equal employment, selecting and placing human resources, interviewing, employee testing, retention of employees, compensation and employee performance. Attention is given to some specific topics from these areas so more crucial concepts/methods may be dealt with in-depth.

**Course Code: HRM303**
**Course Title: Training and Development**
**Prerequisites: HRM 201**
**Course Description:**
This course introduces the design, delivery and assessment of training programs in businesses and other organizations. Practical importance is placed on the development of training programs and evaluation instruments, as well as on the use of effective instructional methods to deliver these programs with emphasis on applying learning theories to the training function.

**Course Code: HRM 401**
**Course Title: Compensation**
**Prerequisites: HRM201**
**Course Description:**
This is a major course introducing the students with various areas of compensation and benefit practices including compensation strategies, job-based structure, job evaluation, building and maintaining compensation structure, incentive plans, pay for performance, employee benefits and legal issues in compensation. Attention is given to some specific topics from these areas so more in-depth understanding of crucial concepts/methods is attained.

**Course Code: HRM 407**
**Course Title: Performance Management**
**Prerequisites: HRM201**
**Course Description:**
This course is discussing the major theories and practices related to Performance Management. It examines HR performance assessment and types of evaluation and appraisal systems, the relation between the performance appraisal and the succession, training, incentive systems, planning, empowerment, and HR development. It also deals with the most common performance problems faced by HR officers, explaining the techniques they can use to improve the workforce performance and stability in their vocations and in the organization.

**Course Code: HRM 409**
**Course Title: Labor Relations**
**Prerequisites: HRM201**
**Course Description:**
This course introduces the student with the main issues of labor relations and integrates learning material with examples from the UAE and GCC. It covers areas including labor relations; Emirates labor laws, labor unions, bargaining issues, process of negotiations, contract administration, and organizational conflict. This course surveys the effects of employment dynamics, Union organization and representation, collective bargaining and negotiation, grievance and arbitration processes, labor laws and governmental agencies regulating labor practice Contemporary issues on labor-management relations in the public and private sectors of the workplace.

**Course Code: HRM410**
**Course Title: Strategic Human Resource Management**
**Prerequisites: HRM303**
**Course Description:**
Making the balance between theoretical approaches in SHRM and their reflection in the key practical issues that the HR managers face, this course provides the students with the necessary knowledge about the strategic dimension of HRM and the necessary skills for its implementation to the different HRM practices and policies.

**Course Code: BUS305**
**Course Title: Business Law**
**Prerequisites: BUS100 + GEN304**
**Course Description:**
This course provides a high-level overview of key business-related legal issues. Subjects covered include legal terminology and concepts, the elements of contracts, intellectual property law, employment law, and the legal relationships between buyers and sellers. In addition, there will be a focus on how these issues apply in the context of the legal environment in the UAE.

**Course Code: BS311**
**Course Title: Cross Cultural Management**
**Prerequisites: BUS203**
**Course Description:**
This course provides an overview of international organizational behavior and human resource issues and practices in multi-national organizations. Topics covered include understanding the effects of culture on attitudes and behavior, organizational issues such as structures, systems and technology, and human resource issues such as teamwork, leadership and negotiation, as well as different approaches for effective cross-cultural management.

**Course Code: BUS411**
**Course Title: Change Management**
**Prerequisites: BUS203**
**Course Description:**
This course introduces an overview of change situations, and the issues and methods associated with the management of change. The topics covered include identifying the need for change, planning and communicating change, strategies for implementing change, and overcoming resistance to change. Students will also examine the role of leadership and the competencies and skills required of individuals who initiate, manage, and are affected by change.

**Course Code: BUS413**
**Course Title: Leadership**
**Prerequisites: BUS203**
**Course Description:**
This course provides the basis for understanding what leadership is and what leaders do to be successful. This course will look at how successful leaders develop a vision for the future, align other behind their vision, and motivate them to achieve the vision. This course will review theories of leadership and analyze common strategies used by leaders, both effective and ineffective, as well as address moral and ethical responsibility of leadership.

**Course Code: HRM415**
**Course Title: Graduation Project**
**Prerequisites: After completing 99 CHs + BUS 307**
**Course Description:**
This course provides an opportunity for students to employ academic tools and analysis techniques to research a project that is directly relevant to their majors and their future career. This course can be offered as a 3-credit hour course for students who wish to pursue only the classroom portion of this course and a 6-credit hour course for those who wish to combine research with an internship. The Graduation Project will include weekly classroom sessions for all students to engage in discussions related to idea generation, research techniques and data analysis. Students will also be required to attend several smaller group sessions in which they present their ideas and progress and receive feedback. Students may work individually or in teams and must deliver a case study or paper at the end of the course

**Course Code: HRM 419**

**Course Title: Internship**
**Prerequisites: After completion of 99 CHs**
**Course Description:**
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University.

## Elective Courses

**Course Code: BUS421**
**Course Title: Entrepreneurship and Small Business Management**
**Prerequisites: BUS 203**
**Course Description:**
This course provides an overview of critical issues faced in small business and entrepreneurship. This includes an overview of how strategic planning, operations, human resources and financial management issues are related to small business and entrepreneurs. This course also provides the student with a broad understanding of the basic issues in modern operations management in both manufacturing and service organizations. It focuses on the development of a strategic business plan and competitive business model for a small business or entrepreneurial venture. Special emphasis is placed on adapting business skills to the realistic needs of a small business owner and entrepreneur.
**Course Code: HRM412**
**Course Title: Labor Laws**
**Prerequisites: HRM 201**
**Course Description:**
This course is a critical component of the BBA in Human Resource Management. It completes students' knowledge of HRM practices by adding the essential knowledge of UAE labor law as a frame of reference for analyzing, conducting, and monitoring HR practices in UAE's public as well as private organizations. The course focuses on legislation related to employment conditions, such as hiring, working hours, vacation, type of employment contracts (Unlimited and Limited) and termination of employment. This course discusses the principle of labor laws and regulations affecting the legal relationship between organizations and their employees. Topics include basic concepts such as: fair employment practices, Equal Employment Opportunities (EEO), affirmative action, and employee rights and protections. Upon completion, students should be able to evaluate organization policy for compliance and assure that decisions are not contrary to Law.
**Course Code: BAF305**
**Course Title: Corporate Finance**
**Prerequisites: BAF301**
**Course Description:**
This course is prepared to equip students with Introduction to Corporate Finance, the role of the financial manager, net Present Value and Investments, Risk, Return and Opportunity Costs, Capital Budgeting Analysis, Market Efficiency, Corporate Financing include Patterns of corporate financing, Debt and equity issuance, Private placements, Payout policies, Dividends, Stock repurchases, Deciding on a payout policy.
**Course Code: MKT301**
**Course Title: Consumer Behavior**
**Prerequisites: MKT200**
**Course Description:**
This course is an introduction to the world of consumer behavior. The discipline derives from several social sciences including psychology, sociology, and marketing to explain the behavior of the customer in the marketplace. In this course, the student will understand how personality, perceptions, learning, and attitudes affect consumption behavior. Additionally, to explore how consumption changes during one's life cycle, and how powerful cultural and subcultural influences are on consumers.

# BBA in Marketing- Concentration in E-Commerce

## Major Courses

**Course Code: ECB 305**
**Course Title: E-Commerce Fundamental**
**Prerequisites: Non**
**Course Description:**
This course introduces fundamental concepts in e-commerce, covering various e-commerce models, technologies, strategies, and their applications in the digital marketplace. Emphasis will be on understanding the infrastructure, security, payment systems, and regulatory frameworks that support e-commerce. The course explores case studies from the region, focusing on how businesses utilize e-commerce for growth and sustainability.
**Course Code: BUS302**
**Course Title: E-business**
**Prerequisites: BIT 203**
**Course Description:**
This course develops the student's understanding of basic principles of e-business and e-commerce management, functions, technologies, and goals. The course covers e-business models, strategies, and applications with the explanation of most computer jargon and terminology relevant to e-commerce.
**Course Code: MKT 202**
**Course Title: Consumer Information**
**Prerequisites: MKT 200**
**Course Description**:
This course covers the role of marketing research in consumer behaviour and decision making. Emphasis is placed on both the establishment of theories of CB, together with their practical application and how these behaviours and theories are researched in practice. In all cases the cultural significance of the UAE will be paramount. At the heart of this course is an independent research project, which will take the majority of the semester to complete. It will be based on some aspect of current consumer behaviour and will be fully defined and researched during the time the course is taking place. By the time it is completed, the student will have mastered an array of extremely valuable skills and knowledge bases. Some of the indicative types of projects might include:
•An examination of the motivation to purchase high brand jeans.
•Brand loyalty among restaurant goers in Abu Dhabi.
•Perceptual mapping of Universities in the
•Celebrity endorsement in the UAE.
**Course Code: MKT 302**
**Course Title: Market Research**
**Prerequisites :MKT 202**
**Course Description:**
This course covers the role of marketing research in marketing decision making. Emphasis is placed on marketing research within the context of the UAE business environment and the use of the internet as a research tool. The course covers definition of research problems, selection of research methodologies, design of research projects, interpretation of research results, and translation of research results into action. The heart of this course is an independent research project, which will take the entire semester to complete. By the time it is completed, the student will have mastered an array of extremely valuable skills.
**Course Code: ECB 401**
**Course Title: E-Supply Chain Management**
**Prerequisites: MKT 200**
**Course Description:**
This course offers a comprehensive exploration of supply chain management (SCM) in the digital age, focusing on the integration of electronic systems, data analytics, and global logistics. This course will focus on supply chain strategy, logistics information systems, segmental positioning, order management and fulfillment, inventory, forecasting and collaborative

planning. Student attention is directed to digital logistics as a value-adding process that achieves time and place synchronization of demand with operational fulfillment.

**Course Code: ECB 413**
**Course Title: Business Driven Technology**
**Prerequisites: BIT 203**
**Course Description:**
The course emphasizes the critical role of technology in driving business initiatives, focusing on a business-first approach to technology solutions. It provides students with a comprehensive understanding of how organizations leverage technology to achieve strategic goals, improve operations, and drive innovation within the e-commerce sector. Key areas of study include IT infrastructure, data management, business intelligence, customer relationship management (CRM) systems, cybersecurity, and the integration of emerging technologies such as artificial intelligence (AI), blockchain, and cloud computing.

**Course Code: ECB415**
**Course Title: Graduation Project in E-Commerce**
**Prerequisites: After completing 99 CH + BUS307**
**Course Description:**
This course provides an opportunity for students to apply academic tools and analysis techniques to research on an E-Commerce focused project that aligns with their major and career goals. Offered as a 3-credit course for classroom study or a 6-credit course combining research with an internship, it includes weekly sessions for discussions on idea generation, research methods, and data analysis. Students will also participate in smaller group sessions to present ideas, track progress, and receive feedback. Working individually or in teams, students will complete the course by delivering a case study or research paper on a relevant to the field of E-commerce.

**Course Code:ECB419**
**Course Title: Internship in E-Commerce**
**Prerequisites: After Completing 99 Credit hours**
**Course Description:**
The course consists of 100 hours of work in a private or public organization. The student may select to have his/her internship in the area of E-Commerce or information technology. The choice of workplace is subject to the approval of LU

## Elective Courses

**Course Code: MKT 305**
**Course Title: Consumer Communication**
**Prerequisites: MKT200**
**Course Description:**
To enable students, develop a thorough understanding of brand development and IMC management theory including key concepts such as brand positioning and movement, measurement of brand values, and translation of brand benefits into tangible outputs. This course will help students understand the opportunity and threats posed by brand development and IMC management including the study of relevant buyer behavior concepts, brand creation and development, media messages, resources and budgets, creative translation of brand values, and effectiveness measurements as they relate to the management tasks of developing, implementing, and evaluating promotional strategies.

**Course Code: MKT 304**
**Course Title: International Marketing**
**Prerequisites: MKT 200**
**Course Description:**
This course is designed to provide students with an overview of the international marketing arena. The course deals with all aspects of marketing from an international perspective and prepares the students to deal with foreign competitive situations and internal opportunities. It offers practical exposure to marketing challenges faces by the multinational businesses through case studies and scenarios which relate to several areas of marketing (market research, marketing management, sales-force management, and marketing communications...) and international marketing.

**Course Code: MKT 204**
**Course Title: Personal Selling**
**Prerequisites: MKT200**
**Course Description:**
This course focuses on the application of behavioral and persuasive communication theories and techniques necessary to develop effective personal selling skills within an organization. Emphasis on personal and professional development, interpersonal skills, verbal and written presentation skills, understanding business prospects, selling and buying processes, and developing and maintaining customer satisfaction.

**Course Code: MKT 203**
**Course Title: Service Marketing**
**Prerequisites: MKT200**
**Course Description:**
The purpose of this course is to introduce marketing services as a separate and distinct area of marketing thought and practice and assist in understanding their powerful influence in competitive markets. During this course we focus our attention on marketing services based upon an in-depth understanding of the service customer, realizing that there can be various types of customers in a service environment. We also discuss an overarching philosophy that stresses the importance of the integration of marketing, human resources, and operations within the service system. All course activities are intended to help students become proficient in analyzing and judging the merits of services marketing strategies and assist in making strategic decisions in both business and consumer services industries. Throughout the course an emphasis is placed on marketing's role within the total organization.The purpose of this course is to introduce marketing services as a separate and distinct area of marketing thought and practice and assist in understanding their powerful influence in competitive markets. # BBA in Marketing- Concentration in Digital Marketing

## Major Courses

**Course Code:DMK305**
**Course Title :Digital Marketing Fundamentals**
**Prerequisites:MKT200**
**Course Description:**
This course examines the role and impact of digital marketing as a core component of modern business strategies for customer acquisition and retention. Students will gain insights into both the strategic and tactical aspects of digital marketing, exploring essential topics such as the internet value chain, direct-response and database marketing, viral and email marketing, search and mobile marketing, and social media marketing. Key tools and techniques like Google Ads, pay-per-click, affiliate marketing, blogging, storytelling, and digital marketing metrics will be covered. Emphasis is placed on the integration of digital marketing within overall marketing efforts and its alignment with organizational goals, with a focus on emerging technologies and future trends shaping the field.

**Course Code:DMK309**
**Course Title: Sustainability and Responsible Marketing**
**Prerequisites: KT200**

**Course Description:**
This course explores the integration of environmental sustainability, ethical responsibility, and social impact within marketing strategies, with a particular emphasis on digital marketing platforms. The course is designed to equip students with the knowledge and skills to develop marketing strategies that not only achieve business objectives but also foster positive societal and environmental outcomes. The course covers key topics such as consumer behavior and its relation to sustainable consumption, ethical decision-making processes in marketing, green supply chain management, and the design of sustainable products and services. Special focus will be placed on the role of digital marketing tools and technologies, including social media platforms, content marketing, and online campaigns, to amplify messages of sustainability and drive responsible consumer behavior.

**Course Code: MKT 351**
**Course Title: E-Marketing**
**Prerequisites: MKT 200**
**Course Description:**
The internet and other information technologies have created many interesting and innovative ways to provide customer value since its inception in 1969. Web sites for marketing communication and customer support; one-to-one communication to many different receiving devices; consumer behavior insights based on offline and online data combination; inventory optimization through CRM-SCM integration; a single-minded focus on ROI and associated performance metrics are all important strategies. The social media provide perfect platforms for connecting with today's consumer: High readership blogs, social networks (such as Facebook and LinkedIn), and online communities (such as YouTube, Twitter and Second Life), gave consumers the opportunity to be heard in large numbers, and smart marketers have learned how to tap into these "citizen journalists" for improving products and marketing communication. Students will learn all about these strategies and more in this course. The course uses a mix of lecture/discussion, interesting individual and group projects, and exams. Prepare for an exciting and dynamic learning experience.

**Course Code: MKT 202**
**Course Title: Consumer Information**
**Prerequisites: MKT200**
**Course Description:**
This course covers the role of marketing research in consumer behaviour and decision making. Emphasis is placed on both the establishment of theories of CB, together with their practical application and how these behaviours and theories are researched in practice. In all cases the cultural significance of the UAE will be paramount. At the heart of this course is an independent research project, which will take the majority of the semester to complete. It will be based on some aspect of current consumer behaviour and will be fully defined and researched during the time the course is taking place. By the time it is completed, the student will have mastered an array of extremely valuable skills and knowledge bases. Some of the indicative types of projects might include:

**Course Code: MKT 473**
**Course Title: Social Media Marketing**
**Prerequisites: MKT 351**
**Course Description:**
This course explores the pivotal role of social media marketing as a fundamental element of contemporary business strategies aimed at engaging and retaining customers. Students will gain an in-depth understanding of both strategic and practical aspects of social media marketing, covering key areas such as social media planning, content creation, audience targeting, performance measurement, and campaign optimization. The curriculum delves into social media platforms, buyer personas, and strategic goal setting while leveraging analytics and key performance indicators (KPIs) to drive data-informed decisions. Emphasis is placed on integrating social media efforts with broader marketing objectives, focusing on emerging trends, tools, and technologies shaping the social media landscape.

**Course Code: DMK411**
**Course Title: Digital Marketing Analytics**
**Prerequisites: CIT100**
**Course Description:**
Digital Marketing Analytics focuses on helping managers navigate the complexities of data analysis in the fast-evolving digital world. With rapid advancements in technology and increasing data generation, it's crucial for managers to grasp both the strengths and limitations of popular analytical tools. By doing so, they can uncover patterns and insights in business data to make well-informed decisions. The course provides foundational knowledge in data analysis, along with practical experience with analytical tools, through a mix of lectures, discussions, and interactive sessions. Students will gain hands-on problem-solving skills and learn how to apply various tools in diverse decision-making contexts. Core concepts will be explored through lectures, case discussions, individual exercises, and a team project. As an intensive course, students are expected to complete assigned readings in advance and actively engage in class discussions.

**Course Code: DMK415**
**Course Title: Graduation Project in Digital Marketing**
**Prerequisites: After completing 99 CH + BUS307**
**Course Description:**
This course provides an opportunity for students to apply academic tools and analysis techniques to research on a Digital Marketing focused project that aligns with their major and career goals. Offered as a 3-credit course for classroom study or a 6-credit course combining research with an internship, it includes weekly sessions for discussions on idea generation, research methods, and data analysis. Students will also participate in smaller group sessions to present ideas, track progress, and receive feedback. Working individually or in teams, students will complete the course by delivering a case study or research paper on a relevant FinTech topic.

**Course Code: DMK419**
**Course Title: Internship in Digital Marketing**
**Prerequisites: After Completing 99 Credit hours**
**Course Description:**
The course consists of 100 hours of work in a private or public organization. The student may select to have his/her internship in the area of digital marketing. The choice of workplace is subject to the approval of LC.

## Elective Courses

**Course Code: MKT 305**
**Course Title: Consumer Communication**
**Prerequisites: MKT200**
**Course Description:**
To enable students, develop a thorough understanding of brand development and IMC management theory including key concepts such as brand positioning and movement, measurement of brand values, and translation of brand benefits into tangible outputs. This course will help students understand the opportunity and threats posed by brand development and IMC management including the study of relevant buyer behavior concepts, brand creation and development, media messages, resources and budgets, creative translation of brand values, and effectiveness measurements as they relate to the management tasks of developing, implementing, and evaluating promotional strategies.

**Course Code: MKT 304**

## BBA in Banking and Finance - Concentration FinTech

### Major Courses

**Course Code: FIN301**
**Course Title: Introduction to Fintech and Big Data**
**Prerequisites: Nil**
**Course Description:**
This course provides an in-depth exploration of big data in finance and FinTech, covering data sources, analytics techniques, and applications in financial modeling, risk management, customer insights, and fraud detection. Emphasizing data quality, governance, and security, the course examines blockchain's role in enhancing transparency and addresses privacy concerns. Future trends, including AI and machine learning, are also explored to prepare students for evolving challenges and opportunities in the FinTech landscape.

**Course Code: FIN302**
**Course Title: Introduction to Blockchain and Digital Currencies**
**Prerequisites: Nil**
**Course Description:**
This course provides an in-depth exploration of digital transformation in global finance, focusing on Industry 4.0, blockchain, and artificial intelligence. Students will examine cryptocurrency trading, mining, and exchange dynamics, as well as blockchain's role in securing digital transactions and enabling business automation. Key topics include regulatory and ethical considerations, entrepreneurial opportunities in digital finance, and strategies for navigating the evolving digital finance landscape. The course concludes with insights into global blockchain adaptation and career guidance in blockchain, cryptocurrency, and FinTech.

**Course Code: FIN303**
**Course Title: Innovation, Entrepreneurial Finance, and Fintech**
**Prerequisites: FIN301**
**Course Description:**
This course provides an in-depth exploration of entrepreneurial finance in emerging markets, focusing on the diverse funding needs of startups and the options available to them. Topics include venture capital, bootstrapping, angel investing, bank financing, and alternative sources such as government programs and incubators. Students will also examine FinTech innovations, challenges for women entrepreneurs, and the impact of policy on access to finance. The course concludes with a comparative analysis of financing options and future research directions, preparing students to navigate and support the growth of entrepreneurial ventures.

**Course Code: FIN415**
**Course Title: Graduation Project in FinTech**
**Prerequisites: After completing 99 CH + BUS307**
**Course Description:**
This course provides an opportunity for students to apply academic tools and analysis techniques to research a FinTech-focused project that aligns with their major and career goals. Offered as a 3-credit course for classroom study or a 6-credit course combining research with an internship, it includes weekly sessions for discussions on idea generation, research methods, and data analysis. Students will also participate in smaller group sessions to present ideas, track progress, and receive feedback. Working individually or in teams, students will complete the course by delivering a case study or research paper on a relevant FinTech topic.

**Course Code: FIN419**
**Course Title: Internship in FinTech**
**Prerequisites: After Completing 99 Credit hours**
**Course Description:**
The course consists of 100 hours of work in a private or public organization. The student may select to have his/her internship in any area of business administration or information technology. The choice of workplace is subject to the approval of LC.

**Course Code: BAF305**
**Course Title: Corporate Finance**
**Prerequisites: BAF301**
**Course Description:**
This course is prepared to equip students with Introduction to Corporate Finance, the role of the financial manager, net Present Value and Investments, Risk, Return and Opportunity Costs, Capital Budgeting Analysis, Market Efficiency, Corporate Financing include Patterns of corporate financing, Debt and equity issuance, Private placements, Payout policies, Dividends, Stock repurchases, Deciding on a payout policy.

**Course Code: BAF307**
**Course Title: Investment**
**Prerequisites: BAF301**
**Course Description:**
This course is an introduction to the fundamental principles of

investment management. The course focuses on risk and return analysis across different securities as well as performance evaluation, style analysis, and the behavior of money management professionals in the investment industry. Topics covered include portfolio theory and diversification, mean variance analysis, the efficient market hypothesis and capital asset pricing models.

**Course Code: BAF403**
**Course Title: Financial Institutions and Markets**
**Prerequisites: BAF301**
**Course Description:**
This course provides the learner with an overview on the operation of the financial system within the framework of modern economic and finance theory. It focuses on financial institutions and their role in financial intermediation, financial instruments, and pricing in primary and secondary, stock markets. It also focuses on the share price analysis in global markets and forward and future markets in financial risk management.

## Elective Courses

**Course Code: ACC301**
**Course Title: Intermediate Accounting 1**
**Prerequisites: ACC106**
**Course Description:**
The main purpose of this course is to enhance the student's knowledge of accounting concepts at a more advanced level. The emphasis is on the application of more advanced principles and alternative methods rather than routine accounting procedures. This course covers the underlying principles, procedures, and reporting requirements necessary to gain an understanding of both the preparation and the use of detailed financial statements. Topics include: the conceptual framework of financial accounting; financial statements preparation including the classified statement of financial position, the multiple-step income statement, and the statement of cash flows under IFRS considerations; as well as key issues related to the valuation and recording of cash, receivables, inventories, and plant assets.

**Course Code: ACC401**
**Course Title: Managerial Accounting**
**Prerequisites: ACC200**
**Course Description:**
This course is designed to expose students to the theory and practice of selecting and analyzing managerial and financial accounting information for internal use by managers for decision-making, planning, directing, and controlling purposes. Major topics include managerial accounting concepts, cost behavior, cost analysis, budgeting and profit planning, cost-volume profit analysis, measurement, and analysis of accounting data appropriate to managerial decision making, capital budgeting decision.

**Course Code:BAF311**
**Course Title: Risk Management & Insurance**
**Prerequisites: BAF301**
**Course Description:**
This course provides an introduction to the field of risk management and insurance. Topics covered include public and private insurers, insurance contracts, insurer operations, insurance markets and the global insurance industry, as well as life and health risk management and insurance, personal property and liability risk management and insurance and commercial liability risk management and insurance.

**Course Code: BAF413**
**Course Title: Financial Derivatives**
**Prerequisites: BAF307**
**Course Description:**
This course is a basic introduction to futures, options and other financial derivatives and will discuss the characteristics of different types of derivatives and how they are traded. The main topics include forwards, futures, swaps, options, binomial options pricing, the Black-Scholes formula, and financial engineering for hedging and risk management. The course will also cover the volatility of derivatives and their increasing importance in financial markets.

# BBA in Banking and Finance – Concentration Finance

## Major Courses

**Course Code: BAF305**
**Course Title: Corporate Finance**
**Prerequisites: BAF301**

Students will examine cryptocurrency trading, mining, and exchange dynamics, as well as blockchain's role in securing digital transactions and enabling business automation. Key topics include regulatory and ethical considerations, entrepreneurial opportunities in digital finance, and strategies for navigating the evolving digital finance landscape. The course concludes with insights into global blockchain adaptation and career guidance in blockchain, cryptocurrency, and FinTech.

# Diploma in Human Resource Management

## Core Courses

**Course Code: BUS100**
**Course Title: Introduction to Management**
**Prerequisites: Non**
**Course Description:**
This course aims to introduce students with knowledge of the principles, functions and techniques of management to gain a solid background in business organization and management. Essential topics examined in this course include management functions, decision-making, motivation, communication. Special attention is paid to the cultural and regional context of business organizations. This course expected to serve as a foundation for other courses in business.
**Course Code: ACC106**
**Course Title: Accounting Principles 1**
**Prerequisites: Nil**
**Course Description:**
This course is an introduction to financial accounting methods such as recording and book- keeping in the journal, ledger, and trial balance in accordance with the International Financial Reporting Standards (IFRS). This course is designed to help students apply the appropriate accounting treatment for both adjusting and closing operations. It also helps students in recording business transactions of merchandising companies, calculating cost of inventories, and illustrating internal control and bank reconciliation statement.
**Course Code: MKT200**
**Course Title: Introduction to Marketing**
**Prerequisites: BUS 100**
**Course Description:**
This course introduces the students to basic marketing concepts and terminology and integrates learning material with real world examples. Areas covered include: the marketing concept, marketing mix, the marketing environment, marketing information and research, consumer behavior, pricing strategies and market segmentation
**Course Code: HRM201**
**Course Title: Introduction to Human resource Management**
**Prerequisites: BUS100**
**Course Description:**
This course introduces various areas of human resource management including its strategic role, job analysis, training and development, HR planning and recruitment, employee selection, training and developing employees, performance management, strategic pay plans, employee relations, and employee safety & health in the workplace
**Course Code: BUS201**
**Course Title: Microeconomics**
**Prerequisites:**
**Course Description:**
This course is an introductory course in economic theory and applications. It will familiarize the students with the basic principles of microeconomics. Topics that will be covered include behavior of households and firms, consumption possibilities & preferences, production functions and market structures.
**Course Code: BUS203**
**Course Title: Organizational Behavior**
**Prerequisites: BUS100**
**Course Description:**
This course examines the complex relationships among

individuals, groups, organizations, and society. It emphasizes a dynamic systems approach to understanding and facilitating work relationships through the study of the interaction of individual needs, abilities, and traits with organizational goals and structures. Some of the contemporary organizational issues included in this course are individual and group dynamics, motivation and performance, leadership, power, organizational culture, organizational change, and development.

**Course Code: BAF301**
**Course Title: Introduction to Financial Management**
**Prerequisites: ACC106**
**Course Description:**
This course is prepared to equip students with the fundamentals of financial management. It includes an overview of financial management, analysis of financial Statement, time value of money, risk and return, working capital management, financial statement analysis, sources of finance, and capital budgeting.

## Major Courses

**Course Code: HRM301**
**Course Title: Recruitment and Selection**
**Prerequisites: HRM201**
**Course Description:**
This is a core course discussing various areas of HR Planning and Recruitment including job analysis and recruitment, recruitment in labor markets, legal and ethical considerations in recruitment, managing diversity & equal employment, selecting and placing human resources, interviewing, employee testing, retention of employees, compensation and employee performance. Attention is given to some specific topics from these areas so more crucial concepts/methods may be dealt with in-depth.

**Course Code: HRM303**
**Course Title: Training and Development**
**Prerequisites: HRM 201**
**Course Description:**
This course introduces the design, delivery and assessment of training programs in businesses and other organizations. Practical importance is placed on the development of training programs and evaluation instruments, as well as on the use of effective instructional methods to deliver these programs with emphasis on applying learning theories to the training function.

**Course Code: HRM 401**
**Course Title: Compensation**
**Prerequisites: HRM201**
**Course Description**:
This is a major course introducing the students with various areas of compensation and benefit practices including compensation strategies, job-based structure, job evaluation, building and maintaining compensation structure, incentive plans, pay for performance, employee benefits and legal issues in compensation. Attention is given to some specific topics from these areas so more in-depth understanding of crucial concepts/methods is attained.

**Course Code: HRM 403**
**Course Title: Occupational health and safety**
**Prerequisites: HRM201**
**Course Description:**
This course will develop knowledge in the area of occupational health and safety management and will give students a critical introduction to the broad subject of OHS to examine in detail some of the specific theoretical and practical issues related to the topic. Moreover, this course will integrate topical workplace health and safety issues into the context of previous studies to provide students with skills to analyze, evaluate current trends in OHS.

**Course Code: HRM 407**
**Course Title: Performance Management**
**Prerequisites: HRM201**
**Course Description:**
This course is discussing the major theories and practices related to Performance Management. It examines HR performance assessment and types of evaluation and appraisal systems, the relation between the performance appraisal and the succession, training, incentive systems, planning, empowerment, and HR development. It also deals with the most common performance problems faced by HR officers, explaining the techniques they can use to improve the workforce performance and stability in their vocations and in the organization.

**Course Code: HRM 409**
**Course Title: Labor Relations**
**Prerequisites: HRM201**
**Course Description**:
This course introduces the student with the main issues of labor relations and integrates learning material with examples from the UAE and GCC. It covers areas including labor relations; Emirates labor laws, labor unions, bargaining issues, process of negotiations, contract administration, and organizational conflict. This course surveys the effects of employment dynamics, Union organization and representation, collective bargaining and negotiation, grievance and arbitration processes, labor laws and governmental agencies regulating labor practice Contemporary issues on labor-management relations in the public and private sectors of the workplace.

**Course Code: BUS305**
**Course Title: Business Law**
**Prerequisites: BUS100 + GEN304**
**Course Description:**
This course provides a high-level overview of key business-related legal issues. Subjects covered include legal terminology and concepts, the elements of contracts, intellectual property law, employment law, and the legal relationships between buyers and sellers. In addition, there will be a focus on how these issues apply in the context of the legal environment in the UAE.

## Elective Courses

**Course Code: HRM410**
**Course Title: Strategic Human Resource Management**
**Prerequisites:HRM201**
**Course Description:**
Making the balance between theoretical approaches in SHRM and their reflection in the key practical issues that the HR managers face, this course provides the students with the necessary knowledge about the strategic dimension of HRM and the necessary skills for its implementation to the different HRM practices and policies.

**Course Code: HRM419**
**Course Title: Internship**
**Prerequisites: After Completing 54 CHs**
**Course Description:**
1. Course Description:
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University

**Course Code: HRM412**
**Course Title: Labor Laws**
**Prerequisites: HRM 201**
**Course Description:**
This course is a critical component of the BBA in Human Resource Management. It completes students' knowledge of HRM practices by adding the essential knowledge of UAE labor law as a frame of reference for analyzing, conducting, and monitoring HR practices in UAE's public as well as private organizations. The course focuses on legislation related to employment conditions, such as hiring, working hours, vacation, type of employment contracts (Unlimited and Limited) and termination of employment. This course discusses the principle of labor laws and regulations affecting the legal relationship between organizations and their employees. Topics include basic concepts such as: fair employment practices, Equal Employment

Opportunities (EEO), affirmative action, and employee rights and protections. Upon completion, students should be able to evaluate organization policy for compliance and assure that decisions are not contrary to Law.

# Diploma in Business Administration and Computer Information Systems

## Core Courses

**Course Code: BUS100**
**Course Title: Introduction to Management**
**Prerequisites: Non**
**Course Description:**
This course aims to introduce students with knowledge of the principles, functions and techniques of management to gain a solid background in business organization and management. Essential topics examined in this course include management functions, decision-making, motivation, communication. Special attention is paid to the cultural and regional context of business organizations. This course expected to serve as a foundation for other courses in business.
**Course Code: ACC106**
**Course Title: Accounting Principles 1**
**Prerequisites: Nil**
**Course Description:**
This course is an introduction to financial accounting methods such as recording and book- keeping in the journal, ledger, and trial balance in accordance with the International Financial Reporting Standards (IFRS). This course is designed to help students apply the appropriate accounting treatment for both adjusting and closing operations. It also helps students in recording business transactions of merchandising companies, calculating cost of inventories, and illustrating internal control and bank reconciliation statement.
**Course Code: BAF301**
**Course Title: Introduction to Financial Management**
**Prerequisites: ACC106**
**Course Description:**
This course is prepared to equip students with the fundamentals of financial management. It includes an overview of financial management, analysis of financial Statement, time value of money, risk and return, working capital management, financial statement analysis, sources of finance, and capital budgeting.
**Course Code: MTH 105**
**Course Title: Mathematics and Statistics**
**Prerequisites: Non**
**Course Description:**
**T**his course introduces some mathematical concepts needed for success and facing this century life. It covers different topics like; basic concepts of mathematics, such as ratios and proportions,
general algebra, linear equations, and linear and exponential functions by graphing them. Additionally, it covers the basic concepts of statistics and how to analyze statistical results.
**Course Code: MKT200**
**Course Title: Introduction to Marketing**
**Prerequisites: BUS 100**
**Course Description:**
This course introduces the students to basic marketing concepts and terminology and integrates learning material with real world examples. Areas covered include: the marketing concept, marketing mix, the marketing environment, marketing information and research, consumer behavior, pricing strategies and market segmentation
**Course Code: BUS201**
**Course Title: Microeconomics**
**Prerequisites:**
**Course Description:**
This course is an introductory course in economic theory and applications. It will familiarize the students with the basic principles of microeconomics. Topics that will be covered include behavior of households and firms, consumption possibilities & preferences, production functions and market structures.
**Course Code: BUS203**
**Course Title: Organizational Behavior**
**Prerequisites: BUS100**
**Course Description:**
This course examines the complex relationships among individuals, groups, organizations, and society. It emphasizes a dynamic systems approach to understanding and facilitating work relationships through the study of the interaction of individual needs, abilities, and traits with organizational goals and structures. Some of the contemporary organizational issues included in this course are individual and group dynamics, motivation and performance, leadership, power, organizational culture, organizational change, and development.
**Course Code: BUS301**
**Course Title: Macroeconomics**
**Prerequisites: Microeconomics (BUS201)**
**Course Description:**
This course provides an understanding of the role and methodology of economics, components of the economy, roles of government and central bank in the economy through fiscal policy, monetary policy, and system. This course also covers macroeconomic indicators (GDP, Inflation, and Unemployment), economic growth and the business cycle

## Major Courses

**Course Code BIT201**
**Course Title Introduction to Computer Programming**
**Prerequisites CIT100**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.
**Course Code BIT413**
**Course Title: Data Communication and Networking**
**Prerequisites: CIT100**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.
**Course Code BIT305**
**Course Title: Database Management Systems**
**PrerequisitesCIT100**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.
**Course Code BIT205**
**Course Title: Object-Oriented Programming**
**Prerequisites BIT201**
**Course Description:**
This course introduces the fundamental concepts of Object-

Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code: BIT207**
**Course Title: Introduction to Web Development**
**Prerequisites: CIT100**
**Course Description:**
This course is an introduction to Web Development using HTML language. It covers the following elements: Hypertext Markup Language (HTML), Cascading Style Sheets for creating web-formed Web pages that are compliant with current Web standards and how to publish students' Web sites. In addition, this course covers the application of JavaScript and DHTML as client-side programming. Students will learn the best practices for sustainable web design, such as optimizing images and scripts, minimizing resource usage, and ensuring accessibility and usability.

**Course Code: BIT407**
**Course Title: Object-Oriented Systems Analysis and Design**
**Prerequisites: BIT205**
**Course Description:**
This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.

**Course Code: BIT417**
**Course Title: Advanced Web Development**
**Prerequisites: BIT207**
**Course Description:**
This course provides practical knowledge for designing and developing web-based applications using modern web development techniques. It focuses on HTML, CSS, and dynamic web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.

**Course Code: BIT203**
**Course Title: Management Information Systems**
**Prerequisites: CIT100**
**Course Description:**
This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements

**Course Code: BUS302**
**Course Title: e-Business**
**Prerequisites: BIT203**
**Course Description:**
this course develops the student's understanding of basic principles of e-business and ecommerce management, functions, technologies, and goals. The course covers e-business models, strategies, and applications with the explanation of most computer jargon and terminology relevant to e-commerce.

## Elective Courses

**Course Code BIT405**
**Course Title: Business Intelligence**
**PrerequisitesBIT305**
**Course Description:**
This course illustrates the applicability of Business Intelligence (BI) in the development of successful business models. It investigates the role of data mining for BI in an organization. Students will first learn appropriate tools and techniques for data pre-processing and data exploration. Then, they will explore and apply some supervised and unsupervised data mining techniques to create valuable strategies and make wiser business decisions.

**Course Code: BIT419**
**Course Title: Internship**
**Prerequisites: After completion of 99 CHs**
**Course Description:**
The course requires students to complete a set number of hours in a private or public organization. Students may choose to undertake their internship in any area of business administration. The choice of workplace is subject to the approval of Liwa University.

**Course Code: BIT430**
**Course Title: Information Security**
**Prerequisites BIT413**
**Course Description:**
This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.

# Master of Business Administration

## Obligatory Courses

**Course Code: MBA 501**
**Course Title: Sustainability, Innovation, and Entrepreneurship**
**Prerequisites: None**
**Course Description:**
This course focuses on the interrelationships between sustainability, innovation and entrepreneurship. The students will understand the effect that innovation and entrepreneurship have on the economy of the country and what they should do to fit in with the highly competitive market with an emphasis on sustainability. They will delve into the personal and professional attributes of successful entrepreneurs, including the importance of personality, experience, training, and networking. They will explore creative problem-solving, the impact of corporate culture on innovation, and the significance of ethical and socially responsible practices in entrepreneurship.

**Course Code: MBA 502**

**Course Title: Applied Corporate Finance**
**Prerequisites: N/A**
**Course Description:**
This course provides a comprehensive exploration of advanced corporate finance principles, equipping students with the skills to analyze complex financial challenges and formulate strategic solutions. Key topics include capital budgeting, valuation techniques, risk management, capital structure, and dividend policy. The course emphasizes ethical decision-making and sustainability practices, fostering responsible value creation and adherence to professional standards. Students will also engage with emerging financial technologies and advanced analytical tools to optimize corporate processes and navigate global financial markets. Designed for aspiring financial leaders, this course prepares participants to drive competitive advantage and contribute meaningfully to organizational success in dynamic and evolving business environments.

**Course Code: MBA503**
**Course Title: Advanced Managerial Accounting**
**Prerequisites: N/A**
**Course Description:**
This course provides an in-depth exploration of advanced managerial accounting concepts and techniques, emphasizing strategic decision-making and organizational success in dynamic business environments. Students will develop the ability to analyze complex business challenges, apply ethical principles, and incorporate sustainability practices into accounting decisions. Key topics include budgeting, cost management, variance analysis, transfer pricing, and advanced decision-making tools such as activity-based costing and capital budgeting. The course also focuses on the integration of advanced analytical tools and emerging technologies to optimize organizational processes, enhance resource allocation, and drive competitive advantage. Designed for advanced accounting students and professionals, this course prepares participants to address modern business challenges with a strong foundation in ethical and sustainable accounting practices.

**Course Code: MBA 601**
**Course Title: Leadership and Organizational Behavior**
**Prerequisites: None**
**Course Description:**
This course introduces the Anchors of Organizational Behavior Knowledge and MARS Model of Individual Behavior and Performance. It addresses the following topics Perceiving Ourselves and Others in Organizations, Workplace Emotions, Attitudes, Stress, Foundations of Employee Motivation, Decision Making and Creativity, Leadership in Organizational Settings, Team Dynamics, Power and Influence in the Workplace, Conflict and Negotiation in the Workplace, and Organizational Change.

**Course Code: MBA 602**
**Course Title: International Business Management**
**Prerequisites: None**
**Course Description:**
This course introduces Key Concepts in International Business and Globalization of Markets and the Internationalization of the Firm. It covers the following topics: The Cultural Environment of International Business, Ethics, Corporate Social Responsibility, Sustainability, and Governance in International Business, Theories of International Trade and Investment. It addresses international entry strategies including Exporting and Global Sourcing, Foreign Direct Investment and Collaborative Ventures, Licensing, Franchising, and Other Contractual Strategies.

**Course Code: MBA 603**
**Course Title: International Strategic Management**
**Prerequisites: MBA 602**
**Course Description:**
This course focuses on international business strategy, emphasizing functional processes of international business (managing marketing, operations, HR and finance). It explores the globalization of markets and competition with emphasis on some emerging global trends underpinned by the concepts of social responsibility and sustainable development. Students will be able to evaluate country-specific opportunities, design the market entry strategies, as well as manage global mergers, acquisitions and strategic partnerships. It also delves into global human resource management, organizational design, and strategic management, equipping students with the tools to design and lead successful global organizations.

**Course Code: MBA 604**
**Course Title: Operations and Supply Chain Management**
**Prerequisites: None**
**Course Description:**
This course introduces the operations function and its strategic relevance to other functions, in addition to the evolution of operations and supply chain management. It addresses the concepts and decision-making tools relevant to quality management, product design, capacity and facilities design, processes and technology, facility location, inventory management, and sales and operations planning. Further, it covers supply chain management including its sustainability, integration, and performance.

**Course Code: MBA 605**
**Course Title: Research Method in Business**
**Prerequisites: MBA 601**
**Course Description:**
This course provides advanced insights into the research process within business context, equipping students with the skills needed to design, conduct, and present impactful business research. Students will develop a critical understanding of the research process, from formulating research questions and proposals to ethical considerations and methodological design. Emphasis is placed on practical applications, including selecting appropriate sampling techniques, employing qualitative and quantitative analysis methods such as hypothesis testing and regression, and effectively communicating findings through structured reports and presentations. The course integrates reflective practices and theoretical underpinnings to prepare students for addressing real-world business challenges with evidence-based research.

**Course Code: MBA 607**
**Course Title: Thesis**
**Prerequisites: MBA 605**
**Course Description:**
This course provides MBA students with the opportunity to conduct advanced research on real-world business challenges, emphasizing strategic problem-solving and data-driven decision-making. Through a structured thesis process, students will develop and demonstrate leadership and collaboration skills, applying ethical principles and sustainability practices to ensure responsible and impactful contributions. The course integrates advanced analytical tools and emerging business technologies, enabling participants to address global business opportunities and challenges in diverse cultural, economic, and regulatory contexts. By the end of the course, students will deliver a comprehensive thesis and oral presentation that showcase their ability to propose actionable insights and drive competitive advantage in dynamic markets.

## Elective Courses

**Course Code: MBA 504**
**Course Title: Project Management**
**Prerequisites: NA**
**Course Description:**
This course provides an in-depth exploration of project management principles, emphasizing a systems approach to planning, scheduling, and controlling projects. Students will gain insights into the roles and responsibilities of project managers, organizational structures, communication strategies, and risk management techniques. Topics include modern developments in project management, trade-off analysis, and integrating quality management. The course also incorporates practical

applications of project scheduling, estimation, and leadership to ensure project success.

**Course Code: MBA 506**

**Course Title: Information Technology Strategy and Management**

**Prerequisites: None**

**Course Description:**

This course equips students with a thorough understanding of the recent advancements in IT as well as the key factors influencing corporate success, expansion, and sustainability. The course includes multiple real-world case studies of how companies use IT to boost production and efficiency, improve teamwork and communication, and optimize their edge over competitors. Students gain knowledge about how IT may be used to manage corporate relationships and projects, optimize systems and processes, engage and retain customers, and restructure organizations.

**Course Code: MBA 606**

**Course Title: Marketing Management in the Digital Era**

**Prerequisites: NA**

**Course Description:**

This course explores the core principles of marketing management with a focus on the challenges and opportunities presented by the digital era. It emphasizes strategic decision-making and the integration of traditional and digital marketing practices to create value for organizations and their stakeholders. Topics include consumer and business market analysis, branding strategies, integrated marketing communications, pricing strategies, and the role of emerging technologies in marketing. Through case studies, projects, and practical exercises, students will develop the skills to design and implement effective marketing strategies that align with global trends and diverse consumer behaviors.

# COLLEGE OF ENGINEERING AND COMPUTING

## Bachelor of Science in Mechanical Engineering

### Major Courses

**Course Code: CIT234**
**Course Name: Discrete Mathematics**
**Prerequisites: MTH105**
**Course Description:**
This course enables students to strengthen and increase their understanding of discrete mathematics with special emphasis on computer science applications. Binomial Coefficients, Combinations, Permutations, Combinatorial Proofs, Stars, and Bars will be covered in this course. Also concepts Arithmetic, Geometric Sequences, Polynomial Fitting, Solving Recurrence Relations, and Induction. Propositional Logic, Proofs, Graph Theory will be used to solve real-world problems. Additionally, Discrete Math for Sustainable Computing will be presented.

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT122**
**Course Name: Introduction to Database Management Systems**
**Prerequisites: CIT112**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code: DSAI121**
**Course Name: Introduction to Computer Architecture for Artificial Intelligence**
**Prerequisites: Non**
**Course Description:**
This course introduces the core principles of computer architecture with a focus on AI applications. Students will analyze processor, memory, and I/O architectures, and design digital circuits using Boolean algebra and Karnaugh maps. The course explores GPU, TPU, and ASIC architectures suitable for AI tasks, while highlighting memory organization, parallel cores, and sustainable, power-efficient computing. Special attention is given to sustainability issues related to power dissipation, such as thermal impact, energy consumption trade-offs, and strategies for minimizing environmental footprint through architectural optimization. Emphasizing current hardware trends, students evaluate scalable architectures for AI performance and industrial relevance. Case studies and projects aligned with Industry 4.0 offer hands-on experience with real-world hardware solutions driving innovation in intelligent systems.

**Course Code: CIT232**
**Course Name: Introduction to Operating Systems**
**Prerequisites: CIT121**
**Course Description:**
This course introduces the core concepts of operating systems and their functions such as memory management, process management and scheduling, handling concurrency and synchronization, file systems, input, and output device management. The course also covers the role of operating systems in management of security and privacy of users and network functions.
Additionally, this course emphasizes the role of operating systems in promoting sustainable computing practices, including efficient resource utilization, energy-aware process scheduling, and support for green IT infrastructures. Industry-relevant examples such as mobile operating systems (Android), virtualization platforms (VMware, Docker), and cloud infrastructure (AWS, Azure) will be introduced to help students relate OS concepts to real-world applications.

**Course Code: CIT231**
**Course Name: Introduction to Computer Networks**
**Prerequisites: CIT121**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.

**Course Code: DSAI212**
**Course Name: Statistics and Probability for Data Science**
**Prerequisites: MTH120+BIM200**
**Course Description:**
This course introduces fundamental concepts in probability and statistics, including events and sample spaces, conditional probability, and random variables. Students will explore probability distributions, cumulative and probability density functions, and moments of random variables. The course also covers key statistical topics such as descriptive statistics, sampling methods, sampling distributions, statistical inference, t-tests, analysis of variance (ANOVA) with one and two factors, randomized complete block design, correlation, regression analysis, and chi-square tests. Emphasis is placed on practical applications and model development relevant to data science.

**Course Code: MCE200**
**Course Title: Introduction to Mechanical System Design**
**Prerequisites: ENGR 140, ENGR 200**
**Course Description:**
This course is intended to introduce students to the fundamental concepts of machine design and mechatronics. Fundamentals of Machine Design, Phases of Design, Design Consideration – Standards and Codes – Selection of Materials –Design against Static and Dynamic Load. Mechatronic system overview: control, sensors, actuators power consideration. In addition to sensors and actuator technologies the laws pertaining to Intellectual Property are also covered. A complete team oriented open-ended design project is required. Each team will execute a design, analysis and fabrication of a prototype system

**Course Code: MCE210**
**Course Title: Mechanics of Materials**
**Prerequisites: ENGR 140**
**Course Description:**
This course deals with a discussion and application of the fundamental concepts of: normal and shear stress; normal and shear strain; stress and deformation of axially loaded members; thermal stresses; torsion of circular and thin-walled sections; shear and bending moment diagrams in beams; bending in

beams; transverse shear; combined loadings; stress/strain transformation; bending moment-curvature equation; deflection of beams.

**Course Code: MCE 220**
**Course Title: Thermodynamics**
**Prerequisites: CHEM100, MTH110, BAS200**
**Course Description:**
This course introduces the first and second laws of thermodynamics and their application to energy transformations during various processes. It also covers the basic properties of pure substances, ideal gases, mixture of ideal gases, and atmospheric air. Energy cycles and energy efficiencies are also discussed

**Course Code: MCE300**
**Course Title: Dynamics**
**Prerequisites: ENGR140**
**Course Description:**
This course introduces the fundamental concepts of dynamics (kinematics and kinetics). It starts with the study of kinematics and kinetics of a particle including relative and absolute motion. Then the analysis is extended to include the study kinematics and kinetics of rigid bodies. Topics covers force and acceleration, work-energy and impulse-momentum methods.

**Course Code: MCE310**
**Course Title: Mechanical Component Design**
**Prerequisites: MCE210 ENGR120**
**Course Description:**
This course Introduces students to the fundamental principles of engineering design of machine components. It involves the application of theory and techniques learned to the design of mechanical component. Formal design methodology is introduced. Topics including fatigue considerations, shaft design, threaded fasteners, lubrication and bearings, springs, and fundamentals of gear analysis are presented.

**Course Code: MCE 330**
**Course Title: Heat Transfer**
**Prerequisites: MCE220, MCE340**
**Course Description:**
This course introduces the basic principles of heat transfer. It covers topics of heat transfer by conduction, convection, and radiation. Steady-state and transient heat transfer problems, and energy conservation, fins, and analysis of heat exchangers are also covered

**Course Code: MCE 340**
**Course Title: Fluid Mechanics for Mechanical Engineers**
**Prerequisites: ENGR 140, MTH120**
**Course Description:**
This course is and introductory course in fluid mechanics. Topics covered include fluid properties, dimensional analysis and similitude, fluid statics, Bernoulli's equation, conservation of mass, momentum and energy, hydraulic gradient line and total energy line, linear and angular momentum equations, viscous flow in pipes, flow over immersed bodies, and concludes with introduction to compressible flows.

**Course Code: MCE415**
**Course Title: Energy and Systems Laboratory**
**Prerequisites: MCE220, MCE330, MCE340**
**Course Description:**
This course is a comprehensive applied study of principles and theories in fluid mechanics, thermodynamics, and heat transfer. It also covers topics such as internal and external flows, pumps, aerodynamic lift and drag, fin performance, refrigeration and air conditioning and jet engine simulator.

**Course Code: MCE435**
**Course Title: Industrial Robotic and control engineering**
**Prerequisites: MCE200, ENGR200, MTH210**
**Course Description:**
The course introduces the students to robotic that relates knowledge and skills in system and control dynamics. The course deals with frequency response analysis, kinematics or robots, differential motion, velocity, root dynamics and feedback control for design of a dynamic robotic systems used in industries.

**Course Code: MCE440**
**Course Title: Mechanical Vibrations**
**Prerequisites: MCE300**
**Course Description:**
This course introduces the techniques in extracting equations of motion for single degree and two degree of freedom systems. Students will learn how to analyze free and forced vibration systems. An introduction to Fourier transform and Fast Fourier transform is also presented in this course. Students will also learn numerical and experimental methods to analyze dynamics of structures.

**Course Code: MCE 450**
**Course Title: Manufacturing Engineering**
**Prerequisites: MCE310**
**Course Description:**
This course mainly helps students to understand the physical and mechanical properties of numerous materials, manufacturing processes, economics, and quality control surrounding various recently developed manufacturing technologies and applications. It also covers fundamentals and challenges to manufacturing processes based on material properties, and design and customization of the final product.

**Course Code: MCE 451**
**Course Title: Manufacturing Engineering Laboratory**
**Prerequisites: MCE450- Co requisite**
**Course Description:**
This course deals with physical manufacturing of engineering components. It provides the needed knowledge, simulation platform and hands-on skills to manufacturing engineering. It covers topics for mechanical tools, manual metal removal mechanisms, CNC machining and Additive Manufacturing

**Course Code: MCE 480**
**Course Title: Mechanics of Composites**
**Prerequisites: ENGR120, MCE 210**
**Course Description:**
This is an introductory course of basic behavior of composites, properties of matrix and reinforcing materials, mechanics of fiber-reinforced composites, lamina and laminate analysis, and mechanical performance.

**Course Code: MCE490**
**Course Title: Senior Design Project I**
**Prerequisites: Senior Standing**
**Course Description:**
This is part one of two-semester sequence courses that provides a culminating major project design experience for the students, where they propose to work on real-world problems that require the application of mechanical engineering knowledge. The project needs to be approved and supervised by a faculty Supervisor. In the Senior Design Project-I course the initial phases of the project are completed, including proposal presentation, development of design requirements, identifying constraints, exploration, and evaluation of potential solutions. The teams write reports and make presentations at the end of the semester.

**Course Code: MCE491**
**Course Title: Senior Design Project II**
**Prerequisites: MCE490**
**Course Description:**
In this second part of the senior design project course sequence the project teams focus on completing their design, conduct cost analysis, and documentation. This project is a multidisciplinary interaction for mechanical engineering design and management that includes system analysis and inculcates sustainable engineering principles and ethical practices. Includes use of engineering software's to complete the design, writing a technical report and developing project drawings, specifications, and details.

## Elective Courses

**Course Code: MCE 455**
**Course Title: Computer Numerical Control Machining**
**Prerequisites: ENGR 220, MCE450**
**Course Description:**
This course introduces students to the fundamentals of CNC programming. In addition to understanding G codes, the course focuses on cutting tools, fixture set up, and manufacturing operations required to machine given materials.
**Course Code: MCE465**
**Course Title: Energy and Environment**
**Prerequisites: MCE220**
**Course Description:**
This course examines the concepts of energy conversion and conservation. Basic principles and technical details of various energy technologies (fossil, nuclear, solar, biomass, hydrogen) for the sustainable future. It discusses the different types of energies and technologies in a social context (economic, ethical, and environmental considerations
**Course Code: MCE 470**
**Course Title: Maintenance Management**
**Prerequisites: MTH230, Sr. Standing**
**Course Description:**
This course represents a deep comprehensive study of operations and activities of maintenance and methods to manage a maintenance department in an industry. It contains an overview of maintenance functions and activities with a study of the different types and problem-solving methods of maintenance issues, including design, analysis, evaluation and control tools for maintenance management.
**Course Code: MCE472**
**Course Title: Fuel cell science and engineering**
**Prerequisites: MCE220, ENGR200**
**Course Description:**
This course presents the engineering principles pertaining to fuel cell devices and their design. It covers topics such as fuel cell types and applications, operational parameters, efficiency, and open circuit voltages. The study also includes regulatory requirements for transporting fuel cells, as well codes and standards of operating a fuel cell powered device
**Course Code: MCE475**
**Course Title: Introduction to Finite Element Analysis**
**Prerequisites: MCE210**
**Course Description:**
This course deals with a discussion and application of the fundamental concepts of: truss, beam and frame plane analysis using the stiffness method, plane elements, plate elements; use of available computer packages for applications in structural analysis.
**Course Code: MCE485**
**Course Title: Decision Analysis**
**Prerequisites: Senior Standing**
**Course Description:**
The course overviews of modeling techniques and methods used in decision analysis, including statistical analysis, and simulation modeling analysis. Model building and analysis for practical applications through real world problems using artificial neural network are conducted.
**Course Code: MCE 495**
**Course Title: Special Topics in mechanical Engineering**
**Prerequisites: Senior Standing**
**Course Description:**
This course covers theoretical and/or practical topics in selected areas of study within the industrial engineering discipline, beyond what is offered in existing courses to meet the interests of the students and ever-changing needs of the job market.

## Bachelor of Science in Industrial Engineering

## Major Courses

**Course Code: IDE 320**
**Course Name: Engineering Statistics - Statistical Inference & Regression**
**Prerequisites: MTH230**
**Course Description:**
The students are introduced to descriptive inferential, non-parametric, and inferential statistics for one and two population, contingency tables, design and analysis of single factor experiments, goodness fit tests, and regression analysis. Appropriate statistical software such as Minitab are introduced in the course.
**Course Code: IDE 330**
**Course Name: Ergonomics**
**Prerequisites: IDE210**
**Course Description:**
Students are introduced to human factors and ergonomics. Problems that hinders employee's performance due to inappropriate working environment that includes high level of noise, poor lighting, poor sanitation and safety, confusing display of information, heavy lifting, poor workflow and workplace designs and use of inappropriate tools are studied. The course topics are reinforced through laboratory exercises
**Course Code: IDE 331**
**Course Name: Ergonomics Laboratory**
**Prerequisites: IDE330 (Co-requisite)**
**Course Description:**
The course deals with adequate ergonomic factors that are essential for optimal performance of work to preserve the most important assent of an enterprise: the human capital. The students implement ergonomic principles by using design, environment, skills, safety, standards and performance. The course topics are experimentally evaluated through laboratory exercises.
**Course Code: IDE 340**
**Course Name: Production Planning & Control**
**Prerequisites: IDE305**
**Course Description:**
Students are introduced to the tools used to add value to the customer. Application of industrial engineering theory and practice to the area of operations management, production planning and control. Concepts in forecasting, demand and push pull production systems are to be introduced in making the value proposition to the customer.
**Course Code: IDE 350**
**Course Name: System Modeling and Simulation**
**Prerequisites: IDE320, IDE305**
**Course Description:**
An introduction to discrete simulation modeling design methods with emphasis of applying statistical analysis. Simulation modeling is applied to manufacturing, supply chain, transportation, and service systems. Verification and validation of simulation models. Appropriate simulation software such as Arena is used in the course.
**Course Code: IDE 370**
**Course Name: Manufacturing Engineering & Industry**
**Prerequisites: ENGR120, ENGR200**
**Course Description:**
This course introduces students to manufacturing processes, geometrical dimensioning and tolerance, computer aided manufacturing, flexible manufacturing, digital manufacturing and Industry 4.0. The course explains the important roles that modelling, simulation and optimization play which targets digital manufacturing and assembly systems for an efficient, flexible and modular production of customized products exploiting the IoT that opens the possibilities for industry 4.0.
**Course Code: IDE 400**

**Course Name: Supply Chain Management**
**Prerequisites: IDE340**
**Course Description:**
Students are introduced to the tool used to manage supply chain systems. This course builds upon the concepts gained from the previous designing value in the supply chain course. Problems of complex systems with unpredictable demand forms and multiple products are studied to make quantitative based decision-making process. The PLAN, SURCE, DELIVER, and RETURN model will be used to optimize the supply chain process.
**Course Code: IDE 450**
**Course Name: Quality Engineering**
**Prerequisites: IDE320**
**Course Description:**
This course introduces the tools and skill sets to solve quality problems encountered by industrial and service industries. Concepts and statistical methods employed in the assurance of product conformance to specifications, control charts for attributes and variables, proven capability analysis, acceptance of sampling plans, international standards and continuous quality improvement.
**Course Code: IDE210**
**Course Name: Lean Work Design**
**Prerequisites: MTH230**
**Course Description:**
This course provides the principles and tools required to design a production system that utilizes optimal layout, material handling, workflow balance, work methods and standards, teamwork, assembly process documentation, quality control, and human factors.
**Course Code: IDE 305**
**Course Name: Operations Management**
**Prerequisites: IDE210**
**Course Description:**
The course provides a foundation in fundamental concepts, techniques and applications of contemporary production and operations management to serve as tools for improving quality, productivity and international competitiveness. It covers a selection of quantitative tools and techniques to aid in decision making and operations management setting. Topics such as forecasting, product and service development, capacity planning, process selection, facility planning, quality management and inventory management will be introduced. The concepts for designing, planning and improving manufacturing and service organizations are also examined.
**Course Code: IDE 310**
**Course Name: Control Systems Engineering**
**Prerequisites: ENGR200**
**Course Description:**
This course introduces student to the use of hardware and software resources used to automate and control operation in manufacturing and non-manufacturing industries. Students learn to write and test relay logic circuits. Next students learn to program industrial grade PLC's (Programmable Logic Controllers) such as Rockwell, Siemens, GE…products that are used in manufacturing to coordinate robotics, NC machines, and conveyors operations, material handling, water treatment plants, energy management operations.
**Course Code: IDE410**
**Course Name: Operations Research I**
**Prerequisites: IDE305**
**Course Description:**
This course introduces Linear programming and formulation, graphical solution and Simplex algorithm as well as duality and sensitivity analysis. Moreover, it covers transportation, transshipment, network, and assignment models.
**Course Code: IDE420**
**Course Name: Facility Planning**
**Prerequisites: IDE305**
**Course Description:**
A comprehensive analysis of the major design issues in facilities planning of production and service facilities. The course emphasizes the use of quantitative and qualitative analysis in the design process. Topics include facility location, plant layout, materials handling, materials flow analysis, and distribution systems.
**Course Code: IDE490**
**Course Name: Senior Design Project I**
**Prerequisites: Senior Standing**
**Course Description:**
This is part one of two-semester sequence courses that provides a culminating major project design experience for the students, where they propose to work on real-world problems that require the application of industrial engineering knowledge. The project needs to be approved and supervised by a faculty Supervisor. In the Senior Design Project-I course the initial phases of the project are completed, including proposal presentation, development of design requirements, identifying constraints, exploration, and evaluation of potential solutions. The teams write reports and make presentations at the end of the semester.
**Course Code: IDE491**
**Course Name: Senior Design Project II**
**Prerequisites: IDE490**
**Course Description:**
In this second part of the senior design project course sequence the project teams focus on completing their design, conduct cost analysis, and documentation. This project is a multidisciplinary interaction for industrial engineering design and management that includes system analysis and inculcates sustainable engineering principles and ethical practices. Includes use of engineering software's to complete the design, writing a technical report and developing project drawings, specifications, and details.

## Elective Courses

**Course Code: IDE 455**
**Course Name: Project Management**
**Prerequisites: IDE305**
**Course Description:**
This course introduces students to the concepts associated with project management, and practical application of the ideas in the day-to-day planning and execution of projects. It covers all the essential aspects of project management, including creating the project scope and schedule, creating a project management plan, developing communications plan, and integration of information technology tools in project management.
**Course Code: IDE 465**
**Course Name: Industrial Robotics**
**Prerequisites: IDE370**
**Course Description:**
This course introduces the use of robots in industrial settings. Robots programing to perform specific

operations. Robot main and peripheral components. Safety, end-effector design, motion control, and path planning

**Course Code: IDE 470**
**Course Name: Maintenance Management**
**Prerequisites: MTH230, Sr. Standing**
**Course Description:**
This course represents a deep comprehensive study of operations and activities of maintenance and methods to manage a maintenance department in an industry. It contains an overview of maintenance functions and activities with a study of the different types and problem-solving methods of maintenance issues, including design, analysis, evaluation and control tools for maintenance management.

**Course Code: IDE475**
**Course Name: Cost Accounting and Analysis**
**Prerequisites: ENGR240**
**Course Description:**
The course is intended to provide industrial engineering student with the necessary concept, tools and methods for costing products and processes. Topics include cost concept and classification, standard costing system, job order costing, activity-based costing and process costing.

**Course Code: IDE480**
**Course Name: Operations Research II**
**Prerequisites: IDE445**
**Course Description:**
This course introduces students to non-linear, integer, and modeling networks using modeling languages. The course will also be introducing advanced topics like Queuing systems and simulations on advanced software's.

**Course Code: IDE485**
**Course Name: Decision Analysis**
**Prerequisites: IDE350**
**Course Description:**
The course overviews of modeling techniques and methods used in decision analysis, including statistical analysis, and simulation modeling analysis. Model building and analysis for practical applications through real world problems using artificial neural network are conducted.

**Course Code: IDE 495**
**Course Name: Special Topics in Industrial Engineering**
**Prerequisites: Senior Standing**
**Course Description:**
This course covers theoretical and/or practical topics in selected areas of study within the industrial engineering discipline, beyond what is offered in existing courses to meet the interests of the students and ever-changing needs of the job market.

# Bachelor of Science in Data Science and Artificial Intelligence Engineering

## Compulsory Courses

**Course Code: CIT234**
**Course Name: Discrete Mathematics**
**Prerequisites: MTH105**
**Course Description:**
This course enables students to strengthen and increase their understanding of discrete mathematics with special emphasis on computer science applications. Binomial Coefficients, Combinations, Permutations, Combinatorial Proofs, Stars, and Bars will be covered in this course. Also concepts Arithmetic, Geometric Sequences, Polynomial Fitting, Solving Recurrence Relations, and Induction. Propositional Logic, Proofs, Graph Theory will be used to solve real-world problems. Additionally, Discrete Math for Sustainable Computing will be presented.

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT122**
**Course Name: Introduction to Database Management Systems**
**Prerequisites: CIT112**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code: DSAI121**
**Course Name: Introduction to Computer Architecture for Artificial Intelligence**
**Prerequisites: Non**
**Course Description:**
This course introduces the core principles of computer architecture with a focus on AI applications. Students will analyze processor, memory, and I/O architectures, and design digital circuits using Boolean algebra and Karnaugh maps. The course explores GPU, TPU, and ASIC architectures suitable for AI tasks, while highlighting memory organization, parallel cores, and sustainable, power-efficient computing. Special attention is given to sustainability issues related to power dissipation, such as thermal impact, energy consumption trade-offs, and strategies for minimizing environmental footprint through architectural optimization. Emphasizing current hardware trends, students evaluate scalable architectures for AI performance and industrial relevance. Case studies and projects aligned with Industry 4.0 offer hands-on experience with real-world hardware solutions driving innovation in intelligent systems.

**Course Code: CIT232**
**Course Name: Introduction to Operating Systems**
**Prerequisites: CIT121**
**Course Description:**
This course introduces the core concepts of operating systems and their functions such as memory management, process management and scheduling, handling concurrency and synchronization, file systems, input, and output device management. The course also covers the role of operating systems in management of security and privacy of users and network functions.
Additionally, this course emphasizes the role of operating systems in promoting sustainable computing practices, including efficient resource utilization, energy-aware process scheduling, and support for green IT infrastructures. Industry-relevant examples such as mobile operating systems (Android), virtualization platforms (VMware, Docker), and cloud infrastructure (AWS, Azure) will be introduced to help students relate OS concepts to real-world applications.

**Course Code: CIT231**
**Course Name: Introduction to Computer Networks**

**Prerequisites: CIT112**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.
**Course Code: DSAI212**
**Course Name: Statistics and Probability for Data Science**
**Prerequisites: MTH120+BIM200**
**Course Description:**
This course introduces fundamental concepts in probability and statistics, including events and sample spaces, conditional probability, and random variables. Students will explore probability distributions, cumulative and probability density functions, and moments of random variables. The course also covers key statistical topics such as descriptive statistics, sampling methods, sampling distributions, statistical inference, t-tests, analysis of variance (ANOVA) with one and two factors, randomized complete block design, correlation, regression analysis, and chi-square tests. Emphasis is placed on practical applications and model development relevant to data science.
**Course Code: BIM200**
**Course Name: Linear Algebra**
**Prerequisites: MTH 100**
**Course Description:**
This course is an introduction to Linear Algebra and some of its applications. The aim is to teach the fundamentals of linear algebra in a way that illustrates their relevance to business mathematics applications. An Introduction to Matrices and Systems of Linear Equations are given with other topics such as Determinants, Linear Transformations, Eigenvectors and Eigen values. Techniques and application of business mathematics of linear algebra for finance sciences, management, and economics.
**Course Code: CIT354**
**Course Name: Object-Oriented Programming**
**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.
**Course Code: DSAI215**
**Course Name: Introduction to Data Science**
**Prerequisites: DSAI212**
**Course Description:**
This course introduces students to foundational data science concepts and their engineering applications. Students will learn data acquisition, preprocessing, and visualization techniques. Through hands-on programming and experimentation, they will develop basic data workflows, assess data quality, and communicate findings using appropriate standards and tools. The course emphasizes engineering practices, reproducibility, and ethical considerations in data-driven problem solving. In addition, sustainability issues such as the environmental impact of large-scale data storage and computation, energy-efficient algorithm design, and responsible data engineering practices are explored, highlighting the role of data science in promoting sustainable development.
**Course Code: DSAI316**
**Course Name: Data Engineering**
**Prerequisites: DSAI215**
**Course Description:**
This course introduces students to the fundamentals of modern data ecosystems. It covers essential data engineering tasks such as managing, extracting, transforming, and loading (ETL) data. Students will explore various data modeling techniques applicable to structured, semi-structured, and unstructured data types. The course also details the data lifecycle within data analytics projects, including data collection (e.g., importing and crawling), preprocessing (cleaning and transformation), ingestion, and warehousing. Additionally, foundational data visualization techniques are introduced to support data understanding and exploration. By the end of the course, students will be equipped to perform key data engineering processes essential for analytics projects. The course emphasizes how data engineering can contribute to sustainability by optimizing energy-efficient workflows, minimizing data redundancy, and supporting data-driven solutions for sustainable development challenges.
**Course Code: DSAI310**
**Course Name: Data Structures & Algorithms Design**
**Prerequisites: CIT354**
**Course Description:**
This course introduces fundamental data structures and algorithms, focusing on their implementation, efficiency, and complexity analysis using Big O notation. Students develop the ability to apply and compare core structures such as arrays, linked lists, stacks, queues, trees, and graphs, and algorithms like recursion, searching, and sorting to solve computational sustainable problems effectively
**Course Code: DSAI312**
**Course Name: Data Analytics**
**Prerequisites: DSAI215**
**Course Description:**
Data Analytics is an advanced course designed for students who have completed foundational studies in Data Science. It focuses on developing the ability to conduct comprehensive analyses across various data types and real-world contexts. Students will be engaged in the full spectrum of data analytics, including descriptive, predictive, and prescriptive analyses, to derive insights, forecast outcomes, and support data-driven decision-making. The course emphasizes practical skills in data preparation, model selection, and result interpretation, with applications spanning business, technology, scientific and sustainability domains. Through hands-on projects and critical evaluation of analytical techniques, students will learn to align methods with the specific structure and goals of each dataset, preparing them to address complex analytical challenges with confidence and precision.
**Course Code: DSAI313**
**Course Name: Data Analytics Lab**
**Prerequisites: DSAI312 (Co-requisite)**
**Course Description:**
This course introduces core concepts in data analytics through practical lab sessions using industry-standard tools. Students will engage in data wrangling, visualization, predictive modeling, and big data analytics, while applying solutions to real-world business and sustainability challenges. The course provides hands-on experience with tools such as Python (Pandas, NumPy, Scikit-learn) for data processing and machine learning, R (ggplot2, plotly) for visualization, Tableau and Power BI for business intelligence dashboards, and Hadoop and Apache Spark for big data processing. By the end of the course, students will be able to analyze datasets effectively and communicate insights

through professional data-driven reports and dashboards.

**Course Code: DSAI314**
**Course Name: Advanced Data Science**
**Prerequisites: DSAI215**
**Course Description:**
This course deepens students' understanding of data science by exploring advanced modeling techniques including machine learning, deep learning, and natural language processing. Students design and implement complex data pipelines, evaluate models using ethical frameworks, and apply feature engineering and big data tools. The course emphasizes critical thinking, project execution, and deployment of scalable solutions aligned with real-world engineering challenges preparing the needed insights for strategic decision making.

**Course Code: CIT362**
**Course Name: Information Security Management**
**Prerequisites: CIT241**
**Course Description:**
This course focuses on the managerial aspects of information security and assurance. Topics covered include access control models, information security governance, and information security program assessment and metrics. Coverage on the foundational and technical components of information security is included in reinforcing key concepts. The course includes up-to-date information on changes in the field, such as national and international laws and international standards like the ISO 27000 series, Risk Management, Security Mechanisms, and Blockchain concepts and applications. Sustainable security practices are emphasized to ensure long-term protection, efficiency, and responsible resource management.

**Course Code: CIT473**
**Course Name: Introduction to Artificial Intelligence.**
**Prerequisites: DSAI310 +DSAI212**
**Course Description:**
This course introduces undergraduate students to the fundamental concepts and techniques in Artificial Intelligence (AI). Students will explore how intelligent systems can be designed to solve problems using methods such as search algorithms, rule-based reasoning, and basic machine learning. The course covers key areas including knowledge representation, natural language processing, and AI applications in areas such as the Internet of Things (IoT) and sustainability. Emphasis is placed on how AI technologies can contribute to addressing global challenges such as energy efficiency, climate change, and smart resource management.

**Course Code: DSAI317**
**Course Name: AI Ethics and Policy**
**Prerequisites: CIT473**
**Course Description:**
This course explores the ethical, social, and policy implications of Artificial Intelligence (AI). It examines foundational concepts in AI and data science ethics, key ethical principles, frameworks, and policies that guide the responsible development, deployment, and use of AI and data science technologies. The course encourages critical thinking on AI's impact on society, privacy, accountability, sustainability, and human rights.

**Course Code: DSAI318**
**Course Name: Internship**
**Prerequisites: 90 Credits**
**Course Description:**
This internship course is designed to provide students with practical, industry-based experience in the field of Data Science and Artificial Intelligence. Students will work with host organizations to apply theoretical knowledge, develop professional skills, and engage in real-world problem-solving. The internship emphasizes hands-on experience, industry exposure, and alignment with engineering principles, including sustainability and ethical responsibilities.

**Course Code: CIT477**
**Course Name: Natural Language Processing**
**Prerequisites: DSAI215, CIT473**
**Course Description:**
This course explores the theory and practical aspects of processing human language using computational methods. Topics include text preprocessing, language modeling, part-of-speech tagging, syntactic parsing, semantic analysis, and pragmatic analysis. It also covers applications of NLP techniques such as Named Entity Recognition, Question and Answering Systems, Sentiment Analysis, Topic Modeling, and Sentiment Analysis. Students will gain hands-on experience with NLP tools and libraries. The course also explores how NLP can contribute to sustainability by supporting environmental text analysis and informed decision-making.

**Course Code: DSAI412**
**Course Name: Data Visualization**
**Prerequisites: DSAI312**
**Course Description:**
This course provides students with foundational knowledge and skills in data visualization, focusing on the effective communication of quantitative and qualitative information. The course explores key concepts such as data types, visual perception, design principles, and encoding strategies to transform raw data into meaningful visual representations. Students will utilize industry-relevant tools such as Tableau, Power BI, Python (Matplotlib, Seaborn, Plotly), and Dataiku to develop visualizations that support engineering analysis, decision-making, and problem-solving. Emphasis is placed on critically evaluating visualizations, designing clear and ethical data displays, and presenting data-driven findings to technical and non-technical audiences.

**Course Code: CIT450**
**Course Name: Machine Learning**
**Prerequisites: CIT473**
**Course Description:**
This course provides a comprehensive overview of machine learning fundamentals, covering supervised and unsupervised learning techniques. Students will learn various algorithms and methodologies, including regression, classification, deep learning, Large Language Models (LLMs), and clustering. Advanced topics such as regularization and reinforcement learning are also explored. In addition, the course integrates sustainable AI practices, utilizing cloud platforms to optimize computational efficiency, reduce energy consumption, and promote responsible data management. Students will apply these techniques in real-world industry scenarios.

**Course Code: DSAI413**
**Course Name: Pattern Recognition**
**Prerequisites: CIT473**
**Course Description:**
This course introduces the fundamentals of pattern recognition, emphasizing statistical and structural techniques for the classification and analysis of data patterns. Students will learn to design, implement, and evaluate recognition systems using modern tools, with applications such as handwriting recognition, image classification, and speech processing. The course also encourages the exploration of sustainability-focused applications of pattern recognition, such as environmental data analysis, energy consumption forecasting, and smart resource management systems. Emphasis is placed on developing analytical skills, model selection, and implementation strategies essential for building intelligent and sustainable pattern recognition systems.

**Course Code: DSAI490**
**Course Name: Senior Design Project 1**
**Prerequisites: 90 credits**
**Course Description:**
This course represents the initial phase of the Senior Design Project, where students work in teams to identify a relevant problem in the field of Data Science and Artificial Intelligence, ensuring alignment with sustainability goals and industry

standards. Students are expected to apply theoretical knowledge and practical skills acquired from prior coursework to analyze the problem, design a feasible solution model, test the developed model, verify that it meets the required standards, and develop essential project documentation. These include a detailed project proposal, budget, timeline, and task plan. Emphasis is placed on collaborative teamwork, professional communication, and the integration of ethical and societal considerations. At the end of the course, students will demonstrate their ability to plan and initiate a data-driven engineering project with clear objectives, resource planning, and stakeholder-focused communication.

**Course Code: DSAI491**
**Course Name: Senior Design Project 2**
**Prerequisites: DSAI490**
**Course Description:**
This course is the second phase of the Senior Design Project 1, where students continue the development and completion of their research project related to Data Science and Artificial Intelligence. Building on the foundation of Senior Graduation Project I, students will focus on project implementation, verification, validation, development, evaluation, and final documentation. This course emphasizes technical proficiency, problem-solving, and effective communication of project outcomes, with a strong focus on sustainability principles and alignment with industry standards.

**Course Code: DSAI455**
**Course Name: Introduction to Software Engineering**
**Prerequisites: CIT354**
**Course Description:**
This course offers a broad overview of software engineering principles, focusing on software products, development processes, and software lifecycle. Students will gain practical experience in Object-Oriented Analysis and Design using the Unified Process (UP) and Unified Modeling Language (UML), including use case, analysis, and class diagram modeling. The course also covers modern topics such as Agile methodologies, DevOps (DevSecOps, SecDevOps, DevOpsSec), and key issues in software security and privacy taking into consideration sustainability and international standards meeting designs.

## Elective Courses

**Course Code: DSAI320**
**Course Name: AI and Sustainable Development**
**Prerequisites: CIT473 + 60 credits**
**Course Description:**
This course explores the intersection of Artificial Intelligence (AI) and sustainable development, emphasizing how AI and data science can address global challenges such as climate change, resource management, and social equity. Students will learn to apply AI techniques, such as machine learning, data analytics, and decision support systems to develop innovative, data-driven solutions that promote environmental, economic, and social sustainability. The course integrates foundational concepts of sustainability with practical AI applications, highlighting ethical considerations, responsible innovation, and the societal impact of AI technologies

**Course Code: DSAI321**
**Course Name: Reinforcement Learning**
**Prerequisites: CIT473+ 60 credits**
**Course Description:**
This course provides a comprehensive introduction to both foundational concepts and cutting-edge techniques in reinforcement learning (RL), a pivotal area of artificial intelligence focused on training agents to make sequential decisions through interactions with dynamic and uncertain environments. Students will delve into core RL frameworks such as Markov Decision Processes (MDPs), value-based methods, policy optimization, Q-learning, and deep reinforcement learning. The course emphasizes rigorous mathematical modeling, practical algorithm implementation, and critical evaluation of RL approaches. Real-world applications including robotics, recommendation systems, game AI, and autonomous systems, serve as illustrative case studies. Additionally, the course fosters engineering problem-solving skills and addresses important ethical and sustainability considerations surrounding autonomous decision-making and AI deployment.

**Course Code: DSAI420**
**Course Name: Business Intelligence**
**Prerequisites: DSAI312 + 90 credits**
**Course Description:**
This course explores the principles and practices of Business Intelligence (BI), including data warehousing, ETL processes, dashboard design, and performance measurement. Students will utilize industry-standard BI tools to analyze business data, build visualizations, and communicate insights effectively. The course integrates ethical analysis, sustainability issues, real-time analytics, and project-based learning aligned with engineering and organizational decision-making needs.

**Course Code: DSAI424**
**Course Name: Robotic Process Automation**
**Prerequisites: DSAI413 + 90 credits**
**Course Description:**
This course provides students with the knowledge and skills to design, develop, and deploy software bots for automating rule-based business processes. Students will identify automation opportunities, work with RPA platforms, and implement robust workflows with appropriate error handling and governance. The course highlights best practices, sustainability issues, ethical considerations, and documentation standards essential for scalable automation in engineering contexts.

**Course Code: DSAI416**
**Course Name: Data Science Applications**
**Prerequisites: DSAI212**
**Course Description:**
This course focuses on the implementation of data science solutions across diverse engineering domains such as healthcare, smart cities, and business. Students will analyze domain-specific problems, design and develop data-driven applications, and integrate multiple data sources and APIs. Emphasis is placed on evaluating performance, ensuring sustainability, interpretability, and addressing legal, ethical, and societal impacts of deployed models

**Course Code: CIT451**
**Course Name: Computer Vision**
**Prerequisites: CIT450+ 90 credits**
**Course Description:**
This course introduces students to the foundational concepts, algorithms, and practical tools in computer vision. Topics include image formation, processing, feature extraction, object detection, and image segmentation. Emphasis is placed on real-world applications using libraries such as OpenCV and deep learning frameworks. The course also explores how computer vision technologies contribute to sustainable development through applications in smart cities, environmental monitoring, and efficient resource management. Students will gain both theoretical understanding and hands-on experience through projects that align with sustainable innovation goals.

**Course Code: DSAI482**
**Course Name: Selected Topics in Data Science**
**Prerequisites: 60 credits**
**Course Description:**
This course offers students the opportunity to explore specialized or emerging areas of Data Science beyond the standard curriculum. Each semester, a distinct topic—such as Big Data Engineering, Deep Learning for Natural Language Processing, Ethical AI and Responsible Data Use, Cloud-based Data Analytics, Real-Time Streaming Analytics, Data Visualization for Decision Support, or Privacy-Preserving Machine Learning—is selected and approved. Through lectures, labs, case studies, and projects, students gain in-depth exposure to

advanced concepts, methods, and tools used in contemporary data science practice and research. The course emphasizes hands-on experience, critical thinking, and ethical and sustainability considerations when applying data science in real-world contexts.

# Bachelor of Information Technology (BIT)—General Track

## Core Courses

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT121**
**Course Name: Introduction to Computer Architecture.**
**Prerequisites: Non**
**Course Description:**
This course introduces the concept of computer as a set of hardware, software and data components integrated through different architecture models. The described hardware components include the processor, the memory and the input/output interfaces while the software components include the operating system, the utility software. The course presents data representation at the machine level and introduces the concepts of digital logic to solve sustainability related scenarios. In addition, the students will be given an overview of the evolution of computers and the associated technologies together with a presentation of future technological trends

**Course Code: CIT122**
**Course Name: Introduction to Database Management Systems**
**Prerequisites: CIT112**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code: CIT123**
**Course Name: Computer Programming and Problem Solving**
**Prerequisites: CIT112**
**Course Description:**
This course provides students with a comprehensive understanding of programming concepts and problem-solving techniques. Students will learn data structures, algorithms, and work with functions, modular design, libraries, handle files and exceptions, and manage dynamic data structures such as stacks, queues, linked lists, and trees. The course also emphasizes the role of programming in developing sustainable digital solutions.

**Course Code: CIT231**
**Course Name: Introduction to Computer Networks**
**Prerequisites: CIT121**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.

**Course Code: CIT232**
**Course Name: Introduction to Operating Systems**
**Prerequisites: DSAI121**
**Course Description:**
This course introduces the core concepts of operating systems and their functions such as memory management, process management and scheduling, handling concurrency and synchronization, file systems, input, and output device management. The course also covers the role of operating systems in management of security and privacy of users and network functions.
Additionally, this course emphasizes the role of operating systems in promoting sustainable computing practices, including efficient resource utilization, energy-aware process scheduling, and support for green IT infrastructures. Industry-relevant examples such as mobile operating systems (Android), virtualization platforms (VMware, Docker), and cloud infrastructure (AWS, Azure) will be introduced to help students relate OS concepts to real-world applications.

**Course Code: CIT241**
**Course Name: Network Security**
**Prerequisites: CIT231**
**Course Description:**
This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.

**Course Code: CIT242**
**Course Name: Systems Analysis and Design**
**Prerequisites: CIT122**
**Course Description:**
This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.

**Course Code: CIT244**
**Course Name: Database Programming**
**Prerequisites: CIT122**
**Course Description:**
This course presents mapping rules to convert conceptual and logical designs to physical designs. It also introduces the principles of normalization and denormalization taking into consideration various techniques which are applied to the different normal forms. The course also addresses the concepts of the PL/SQL procedural language including functions, procedures, cursors, packages, and triggers. In addition, this

course discusses database problems and potential solutions and how to improve database performance, productivity, and portability through different integration patterns with DBMSs and programming languages in accordance with software application requirements.

**Course Code: BIT203**
**Course Title: Management Information Systems**
**Prerequisites: CIT100**
**Course Description:**
This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements

**Course Code: CIT234**
**Course Name: Discrete Mathematics**
**Prerequisites: MTH105**
**Course Description:**
This course enables students to strengthen and increase their understanding of discrete mathematics with special emphasis on computer science applications. Binomial Coefficients, Combinations, Permutations, Combinatorial Proofs, Stars, and Bars will be covered in this course. Also concepts Arithmetic, Geometric Sequences, Polynomial Fitting, Solving Recurrence Relations, and Induction. Propositional Logic, Proofs, Graph Theory will be used to solve real-world problems. Additionally, Discrete Math for Sustainable Computing will be presented.

**Course Code: CIT353**
**Course Name: Web Development**
**Prerequisites: CIT123**
**Course Description:**
This course provides practical knowledge for designing and developing web-based applications using modern web development techniques. It focuses on HTML, CSS, and dynamic web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.

**Course Code: CIT354**
**Course Name: Object-Oriented Programming**
**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code:BUS407**
**Course Name: Project Management**
**Prerequisites: BIT203**
**Course Description:**
This course will introduce students to the concepts associated with project management and the practical application of the ideas in the day-to-day planning and execution of projects. The course covers all of the essential aspects of project management, including creating the project scope and schedule, creating a project management plan, developing communications plan, and integration of information technology tools in project management.

**Course Code: CIT362**
**Course Name: Information Security Management**
**Prerequisites: CIT241**
**Course Description:**
This course focuses on the managerial aspects of information security and assurance. Topics covered include access control models, information security governance, and information security program assessment and metrics. Coverage on the foundational and technical components of information security is included in reinforcing key concepts. The course includes up-to-date information on changes in the field, such as national and international laws and international standards like the ISO 27000 series, Risk Management, Security Mechanisms, and Blockchain concepts and applications. Sustainable security practices are emphasized to ensure long-term protection, efficiency, and responsible resource management.

**Course Code: BIM200**
**Course Name: Linear Algebra**
**Prerequisites: MTH105**
**Course Description:**
This course is an introduction to Linear Algebra and some of its applications. The aim is to teach the fundamentals of linear algebra in a way that illustrates their relevance to business mathematics applications. An Introduction to Matrices and Systems of Linear Equations are given with other topics such as Determinants, Linear Transformations, Eigenvectors and Eigen values. Techniques and application of business mathematics of linear algebra for finance sciences, management, and economics.

**Course Code: CIT483**
**Course Name: Internship**
**Prerequisites: 75 credits**
**Course Description:**
This is a supervised course requiring a minimum of 480 hours of structured, industry-based training in Information Technology or related fields. The internship provides students with the opportunity to apply technical skills and academic knowledge to solve real-world IT problems while gaining exposure to current tools, technologies, and practices used in industry, with a focus on sustainability and responsible innovation. Through this experience, students enhance their professional competencies, including teamwork, communication, and time management, and develop an understanding of ethical, social, and environmental considerations in professional IT contexts. Student performance is continuously monitored by an assigned faculty supervisor in collaboration with the workplace supervisor through regular evaluations and progress reviews

**Course Code: CIT472**
**Course Name: User Interface Design**
**Prerequisites: CIT354**
**Course Description:**
This course covers user interface design within the software development process, integrating cognitive theories relevant to effective interaction. It includes usability requirements specification and evaluation, emphasizing a multi-disciplinary approach. Students learn to assess user needs and capabilities and how this influence UI development through iterative design phases such as data gathering, analysis, prototyping, construction, and evaluation. The course introduces green computing principles and eco-friendly design practices. Students will use industry-standard tools such as Figma, Adobe XD, Axure RP, and Sketch for wireframing and prototyping; Miro for collaborative brainstorming and user journey mapping; and Usability Hub or Hotjar for usability testing and feedback gathering.

**Course Code:MTH110**
**Course Name: Calculus I**
**Prerequisites: Non**
**Course Description:**
Calculus is an exciting subject, justly considered to be one of the greatest achievements of human intellect. Today calculus is used not just in the physical sciences, but also in engineering, business, economics, life sciences, and social sciences—any discipline that seeks to understand dynamic phenomena. Part of the aim of this course is to train the student to think logically. Learn to write the solutions of the exercises in a connected, step-by-step fashion with explanatory sentences—not just a string of disconnected equations or formulas. This course is intended to introduce derivatives, one of the two key concepts of calculus. The second is integral. Both key concepts depend on the notion of limit.

**Course Code: CIT478**
**Course Name: Mobile Applications Development**
**Prerequisites: CIT472**
**Course Description:**
This course provides comprehensive knowledge related to designing, developing, and deploying mobile applications and websites, aligning with industry practices. It covers design principles, tools, techniques, and methods for mobile application development, including user interface design, data management, security, privacy, and ethics. Students will gain hands-on experience with industry-standard frameworks, testing tools, and deployment methods, preparing them to create secure, scalable, and sustainable mobile applications for diverse industry sectors.

**Course Code: CIT473**
**Course Name: Introduction to Artificial Intelligence.**
**Prerequisites: 48 credits**
**Course Description:**
This course introduces undergraduate students to the fundamental concepts and techniques in Artificial Intelligence (AI). Students will explore how intelligent systems can be designed to solve problems using methods such as search algorithms, rule-based reasoning, and basic machine learning. The course covers key areas including knowledge representation, natural language processing, and AI applications in areas such as the Internet of Things (IoT) and sustainability. Emphasis is placed on how AI technologies can contribute to addressing global challenges such as energy efficiency, climate change, and smart resource management.

**Course Code: CIT484**
**Course Name: Senior Graduation Project I**
**Prerequisites: 90 credits**
**Course Description:**
This course provides students with the opportunity to explore a chosen area of interest, conduct in-depth research, and demonstrate independent learning, critical thinking, and problem-solving skills. Students will apply research methodologies and concepts acquired in earlier coursework to develop a comprehensive project proposal. The process involves selecting a topic, gathering and analyzing relevant information, formulating a clear problem statement, conducting a literature review, and proposing feasible and innovative solutions. Students are expected to apply appropriate methodologies to analyze the problem and develop an initial system design aligned with sustainability principles. Particular emphasis is placed on incorporating environmental, economic, and social dimensions of sustainability into the project's design and planning. By the end of the course, students will present a preliminary system design and submit a detailed project report that highlights the project's potential contribution to sustainable development goals (SDGs).

**Course Code: CIT485**
**Course Name: Senior Graduation Project II**
**Prerequisites: CIT484**
**Course Description:**
This supervised course is the continuation of Senior Graduation Project I (CIT484), in which students are expected to fully implement their proposed solution. Building on the design phase and documentation developed in SGP1, students will complete the remaining phases of the project, detailed design, system implementation, testing, validation, and final documentation. Throughout the course, students will apply project management practices, adhere to software engineering methodologies, and receive weekly guidance from their academic supervisor. The course emphasizes sustainable development by encouraging the integration of environmentally and socially responsible practices, such as energy efficiency, ethical data usage, and alignment with national and global Sustainable Development Goals (SDGs). The course fosters teamwork, independent problem-solving, ethical responsibility, and effective communication, equipping students with practical and professional skills essential for real-world IT project execution.

## Elective Courses

**Course Code: CIT352**
**Course Name: Distributed Information Management**
**Prerequisites: CIT231**
**Course Description:**
This course provides a comprehensive examination of distributed information systems, which serve as the backbone of modern global organizations. It addresses the fundamental principles of distributed architecture, processes, communication protocols, consistency models, and fault tolerance mechanisms. Students will analyze components of distributed IT infrastructure, including operating systems, naming conventions, and communication frameworks. Particular emphasis is placed on the integration of sustainability principles, focusing on energy-efficient design, environmentally responsible computing practices, and the selection of sustainable cloud services. The course aims to equip students with both the theoretical foundation and practical insights required to design and manage distributed systems that are robust, scalable, and sustainable.

**Course Code: CIT481**
**Course Name: Contemporary Issues in IT**
**Prerequisites: CIT122**
**Course Description:**
This course introduces the student to theoretical and technological aspects of a variety of trending IT Topics besides professional, social, ethical, privacy, security and reliability concerns. The technological trends studied are like Cloud Computing, Virtualization, Internet of Things (IoT), Big Data, Machine Learning (ML), Artificial Intelligence (AI) and Blockchain. Emphasis is placed on evaluating the business, environmental, and societal impacts of these technologies and understanding strategies for integrating them successfully within organizational and smart city contexts.

**Course Code:CIT474**
**Course Name: Internet of Things**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course introduces the architecture, protocols, and real-world applications of the Internet of Things (IoT). Students will explore core concepts such as connectivity, interoperability, discoverability, security/privacy, and sustainability in IoT ecosystems. Emphasis is placed on IoT applications in smart cities, industry, and environmental monitoring. The student will be presented to some tools used for building IoT setup, such as TinkerCAD, Arduino simulators, Linux OS, and Python programming environments.

**Course Code:CIT487**
**Course Name :Cloud and Edge Computing**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course covers important concepts, architectures, and service models in an in-depth examination of cloud and edge

computing. Theoretical lectures, practical exercises, and case studies give students a thorough understanding of the networking, virtualization, and distributed computing technologies that support these paradigms. Working with top cloud platforms and edge computing frameworks to deploy, maintain, and optimize apps is what practical workshops entail. Additionally, the course explores how cloud and edge computing contribute to sustainability by enabling energy-efficient resource management, reducing data transmission overhead, and supporting green IT initiatives. The course also looks at actual use cases from a variety of industries to show how edge and cloud computing technologies are enabling creative solutions and revolutionizing corporate processes.

**Course Code: CIT477**
**Course Name: Natural Language Processing**
**Prerequisites: DSAI215, CIT473**
**Course Description:**
This course explores the theory and practical aspects of processing human language using computational methods. Topics include text preprocessing, language modeling, part-of-speech tagging, syntactic parsing, semantic analysis, and pragmatic analysis. It also covers applications of NLP techniques such as Named Entity Recognition, Question and Answering Systems, Sentiment Analysis, Topic Modeling, and Sentiment Analysis. Students will gain hands-on experience with NLP tools and libraries. The course also explores how NLP can contribute to sustainability by supporting environmental text analysis and informed decision-making.

**Course Code :CIT470**
**Course Name: Data Mining**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description**
This course introduces the principles of data mining to the students. The students will learn preprocessing of data (data cleaning, data reduction etc.) before applying data mining techniques. Some of the data mining techniques covered in this course are classification, association analysis, and clustering. Students will learn about the social and ethical aspects of data mining. Additionally, the course explores how data mining can support sustainability goals, such as optimizing resource consumption and supporting environmental data analysis.

## General Track Courses

**Course Code: CIT233**
**Course Name: Software Development Process**
**Prerequisites: CIT112**
**Course Description:**
This course presents an introduction to the models, processes, and techniques used in developing software systems. It covers the entire life cycle of software systems, from project proposal and requirements analysis through design, development, testing, release, and maintenance. Students are introduced to industry-standard techniques such as fact-finding, software modeling, verification and validation, and system documentation. In alignment with the UAE's sustainability vision and the UN Sustainable Development Goals, this course incorporates eco-conscious software engineering principles. Students are exposed to the Software Carbon Intensity (SCI) Tool from the Green Software Foundation, enabling them to evaluate and reduce the environmental impact of their software designs.

**Course Code: CIT243**
**Course Name: Network Administration**
**Prerequisites: CIT231**
**Course Description:**
This course introduces concepts and technologies behind domain-based enterprise networks. The course covers installation, configuration and administration of enterprise network operating systems and protocols, and services such as active directory, group policies, data storage, backup and disaster recovery to the level required to effectively administer a secured domain-based enterprise networks for both traditional networks and green networks.

**Course Code: CIT352**
**Course Name: Distributed Information Management**
**Prerequisites: CIT231**
**Course Description:**
This course provides a comprehensive examination of distributed information systems, which serve as the backbone of modern global organizations. It addresses the fundamental principles of distributed architecture, processes, communication protocols, consistency models, and fault tolerance mechanisms. Students will analyze components of distributed IT infrastructure, including operating systems, naming conventions, and communication frameworks. Particular emphasis is placed on the integration of sustainability principles, focusing on energy-efficient design, environmentally responsible computing practices, and the selection of sustainable cloud services. The course aims to equip students with both the theoretical foundation and practical insights required to design and manage distributed systems that are robust, scalable, and sustainable.

**Course Code: CIT365**
**Course Name: Advanced Database Design**
**Prerequisites: CIT244**
**Course Description:**
This course offers an in-depth exploration of advanced database design, with a particular emphasis on data warehouse architecture and implementation using industry-relevant tools. Students will engage in conceptual, logical, and physical design stages while examining key topics such as big data management, database administration, and integration with web services. Practical skills will be developed through hands-on use of platforms such as MySQL, Oracle, and Microsoft SQL Server for relational databases, and Power BI for business intelligence and dashboard creation. The course also introduces NoSQL systems (e.g., MongoDB) and cloud-based environments (e.g., AWS, Google Cloud, or Azure) to emphasize sustainable data storage and processing. Sustainable database design principles, including energy efficiency, optimized queries, and responsible cloud resource use are woven throughout the course to prepare students for building scalable, high-performance, and environmentally responsible data systems.

**Course Code: CIT481**
**Course Name: Contemporary Issues in IT**
**Prerequisites: 81 credits**
**Course Description:**
This course introduces the student to theoretical and technological aspects of a variety of trending IT Topics besides professional, social, ethical, privacy, security and reliability concerns. The technological trends studied are like Cloud Computing, Virtualization, Internet of Things (IoT), Big Data, Machine Learning (ML), Artificial Intelligence (AI) and Blockchain. Emphasis is placed on evaluating the business, environmental, and societal impacts of these technologies and understanding strategies for integrating them successfully within organizational and smart city contexts.

# Bachelor of Information Technology (BIT)- Concentration in Artificial Intelligence

## Core Courses

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts,

programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT121**

**Course Name: Introduction to Computer Architecture.**

**Prerequisites: Non**

**Course Description:**

This course introduces the concept of computer as a set of hardware, software and data components integrated through different architecture models. The described hardware components include the processor, the memory and the input/output interfaces while the software components include the operating system, the utility software. The course presents data representation at the machine level and introduces the concepts of digital logic to solve sustainability related scenarios. In addition, the students will be given an overview of the evolution of computers and the associated technologies together with a presentation of future technological trends

**Course Code: CIT122**

**Course Name: Introduction to Database Management Systems**

**Prerequisites: CIT112**

**Course Description:**

This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code: CIT123**

**Course Name: Computer Programming and Problem Solving**

**Prerequisites: CIT112**

**Course Description:**

This course provides students with a comprehensive understanding of programming concepts and problem-solving techniques. Students will learn data structures, algorithms, and work with functions, modular design, libraries, handle files and exceptions, and manage dynamic data structures such as stacks, queues, linked lists, and trees. The course also emphasizes the role of programming in developing sustainable digital solutions.

**Course Code: CIT231**

**Course Name: Introduction to Computer Networks**

**Prerequisites: CIT121**

**Course Description:**

In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.

**Course Code: CIT241**

**Course Name: Network Security**

**Prerequisites: CIT231**

**Course Description:**

This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.

**Course Code: CIT242**

**Course Name: Systems Analysis and Design**

**Prerequisites: CIT122**

**Course Description:**

This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.

**Course Code: CIT244**

**Course Name: Database Programming**

**Prerequisites: CIT122**

**Course Description:**

This course presents mapping rules to convert conceptual and logical designs to physical designs. It also introduces the principles of normalization and denormalization taking into consideration various techniques which are applied to the different normal forms. The course also addresses the concepts of the PL/SQL procedural language including functions, procedures, cursors, packages, and triggers. In addition, this course discusses database problems and potential solutions and how to improve database performance, productivity, and portability through different integration patterns with DBMSs and programming languages in accordance with software application requirements.

**Course Code: BIT203**

**Course Title: Management Information Systems**

**Prerequisites: CIT100**

**Course Description:**

This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements

**Course Code: CIT234**

**Course Name: Discrete Mathematics**

**Prerequisites: MTH105**

**Course Description:**

This course enables students to strengthen and increase their understanding of discrete mathematics with special emphasis on computer science applications. Binomial Coefficients, Combinations, Permutations, Combinatorial Proofs, Stars, and Bars will be covered in this course. Also concepts Arithmetic, Geometric Sequences, Polynomial Fitting, Solving Recurrence Relations, and Induction. Propositional Logic, Proofs, Graph Theory will be used to solve real-world problems. Additionally, Discrete Math for Sustainable Computing will be presented.

**Course Code: CIT353**

**Course Name: Web Development**

**Prerequisites: CIT123**

**Course Description:**

This course provides practical knowledge for designing and developing web-based applications using modern web development techniques. It focuses on HTML, CSS, and dynamic

web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.

**Course Code: CIT354**
**Course Name: Object-Oriented Programming**
**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code:BUS407**
**Course Name: Project Management**
**Prerequisites: BIT203**
**Course Description:**
This course will introduce students to the concepts associated with project management and the practical application of the ideas in the day-to-day planning and execution of projects. The course covers all of the essential aspects of project management, including creating the project scope and schedule, creating a project management plan, developing communications plan, and integration of information technology tools in project management.

**Course Code: CIT362**
**Course Name: Information Security Management**
**Prerequisites: CIT241**
**Course Description:**
This course focuses on the managerial aspects of information security and assurance. Topics covered include access control models, information security governance, and information security program assessment and metrics. Coverage on the foundational and technical components of information security is included in reinforcing key concepts. The course includes up-to-date information on changes in the field, such as national and international laws and international standards like the ISO 27000 series, Risk Management, Security Mechanisms, and Blockchain concepts and applications. Sustainable security practices are emphasized to ensure long-term protection, efficiency, and responsible resource management.

**Course Code: BIM200**
**Course Name: Linear Algebra**
**Prerequisites: MTH105**
**Course Description:**
This course is an introduction to Linear Algebra and some of its applications. The aim is to teach the fundamentals of linear algebra in a way that illustrates their relevance to business mathematics applications. An Introduction to Matrices and Systems of Linear Equations are given with other topics such as Determinants, Linear Transformations, Eigenvectors and Eigen values. Techniques and application of business mathematics of linear algebra for finance sciences, management, and economics.

**Course Code: CIT483**
**Course Name: Internship**
**Prerequisites: 75 credits**
**Course Description:**
This is a supervised course requiring a minimum of 480 hours of structured, industry-based training in Information Technology or related fields. The internship provides students with the opportunity to apply technical skills and academic knowledge to solve real-world IT problems while gaining exposure to current tools, technologies, and practices used in industry, with a focus on sustainability and responsible innovation. Through this experience, students enhance their professional competencies, including teamwork, communication, and time management, and develop an understanding of ethical, social, and environmental considerations in professional IT contexts. Student performance is continuously monitored by an assigned faculty supervisor in collaboration with the workplace supervisor through regular evaluations and progress reviews

**Course Code: CIT472**
**Course Name: User Interface Design**
**Prerequisites: CIT354**
**Course Description:**
This course covers user interface design within the software development process, integrating cognitive theories relevant to effective interaction. It includes usability requirements specification and evaluation, emphasizing a multi-disciplinary approach. Students learn to assess user needs and capabilities and how this influence UI development through iterative design phases such as data gathering, analysis, prototyping, construction, and evaluation. The course introduces green computing principles and eco-friendly design practices. Students will use industry-standard tools such as Figma, Adobe XD, Axure RP, and Sketch for wireframing and prototyping; Miro for collaborative brainstorming and user journey mapping; and Usability Hub or Hotjar for usability testing and feedback gathering.

**Course Code:MTH110**
**Course Name: Calculus I**
**Prerequisites: Non**
**Course Description:**
Calculus is an exciting subject, justly considered to be one of the greatest achievements of human intellect. Today calculus is used not just in the physical sciences, but also in engineering, business, economics, life sciences, and social sciences—any discipline that seeks to understand dynamic phenomena. Part of the aim of this course is to train the student to think logically. Learn to write the solutions of the exercises in a connected, step-by-step fashion with explanatory sentences—not just a string of disconnected equations or formulas. This course is intended to introduce derivatives, one of the two key concepts of calculus. The second is integral. Both key concepts depend on the notion of limit.

**Course Code: CIT478**
**Course Name: Mobile Applications Development**
**Prerequisites: CIT472**
**Course Description:**
This course provides comprehensive knowledge related to designing, developing, and deploying mobile applications and websites, aligning with industry practices. It covers design principles, tools, techniques, and methods for mobile application development, including user interface design, data management, security, privacy, and ethics. Students will gain hands-on experience with industry-standard frameworks, testing tools, and deployment methods, preparing them to create secure, scalable, and sustainable mobile applications for diverse industry sectors.

**Course Code: CIT473**
**Course Name: Introduction to Artificial Intelligence.**
**Prerequisites: 48 credits**
**Course Description:**
This course introduces undergraduate students to the fundamental concepts and techniques in Artificial Intelligence (AI). Students will explore how intelligent systems can be

designed to solve problems using methods such as search algorithms, rule-based reasoning, and basic machine learning. The course covers key areas including knowledge representation, natural language processing, and AI applications in areas such as the Internet of Things (IoT) and sustainability. Emphasis is placed on how AI technologies can contribute to addressing global challenges such as energy efficiency, climate change, and smart resource management.

**Course Code: CIT484**
**Course Name: Senior Graduation Project I**
**Prerequisites: 90 credits**
**Course Description:**
This course provides students with the opportunity to explore a chosen area of interest, conduct in-depth research, and demonstrate independent learning, critical thinking, and problem-solving skills. Students will apply research methodologies and concepts acquired in earlier coursework to develop a comprehensive project proposal. The process involves selecting a topic, gathering and analyzing relevant information, formulating a clear problem statement, conducting a literature review, and proposing feasible and innovative solutions. Students are expected to apply appropriate methodologies to analyze the problem and develop an initial system design aligned with sustainability principles. Particular emphasis is placed on incorporating environmental, economic, and social dimensions of sustainability into the project's design and planning. By the end of the course, students will present a preliminary system design and submit a detailed project report that highlights the project's potential contribution to sustainable development goals (SDGs).

**Course Code: CIT485**
**Course Name: Senior Graduation Project II**
**Prerequisites: CIT484**
**Course Description:**
This supervised course is the continuation of Senior Graduation Project I (CIT484), in which students are expected to fully implement their proposed solution. Building on the design phase and documentation developed in SGP1, students will complete the remaining phases of the project, detailed design, system implementation, testing, validation, and final documentation. Throughout the course, students will apply project management practices, adhere to software engineering methodologies, and receive weekly guidance from their academic supervisor. The course emphasizes sustainable development by encouraging the integration of environmentally and socially responsible practices, such as energy efficiency, ethical data usage, and alignment with national and global Sustainable Development Goals (SDGs). The course fosters teamwork, independent problem-solving, ethical responsibility, and effective communication, equipping students with practical and professional skills essential for real-world IT project execution.

## Elective Courses

**Course Code: CIT352**
**Course Name: Distributed Information Management**
**Prerequisites: CIT231**
**Course Description:**
This course provides a comprehensive examination of distributed information systems, which serve as the backbone of modern global organizations. It addresses the fundamental principles of distributed architecture, processes, communication protocols, consistency models, and fault tolerance mechanisms. Students will analyze components of distributed IT infrastructure, including operating systems, naming conventions, and communication frameworks. Particular emphasis is placed on the integration of sustainability principles, focusing on energy-efficient design, environmentally responsible computing practices, and the selection of sustainable cloud services. The course aims to equip students with both the theoretical foundation and practical insights required to design and manage distributed systems that are robust, scalable, and sustainable.

**Course Code: CIT481**
**Course Name: Contemporary Issues in IT**
**Prerequisites: CIT122**
**Course Description:**
This course introduces the student to theoretical and technological aspects of a variety of trending IT Topics besides professional, social, ethical, privacy, security and reliability concerns. The technological trends studied are like Cloud Computing, Virtualization, Internet of Things (IoT), Big Data, Machine Learning (ML), Artificial Intelligence (AI) and Blockchain. Emphasis is placed on evaluating the business, environmental, and societal impacts of these technologies and understanding strategies for integrating them successfully within organizational and smart city contexts.

**Course Code:CIT474**
**Course Name: Internet of Things**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course introduces the architecture, protocols, and real-world applications of the Internet of Things (IoT). Students will explore core concepts such as connectivity, interoperability, discoverability, security/privacy, and sustainability in IoT ecosystems. Emphasis is placed on IoT applications in smart cities, industry, and environmental monitoring. The student will be presented to some tools used for building IoT setup, such as TinkerCAD, Arduino simulators, Linux OS, and Python programming environments.

**Course Code:CIT487**
**Course Name :Cloud and Edge Computing**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course covers important concepts, architectures, and service models in an in-depth examination of cloud and edge computing. Theoretical lectures, practical exercises, and case studies give students a thorough understanding of the networking, virtualization, and distributed computing technologies that support these paradigms. Working with top cloud platforms and edge computing frameworks to deploy, maintain, and optimize apps is what practical workshops entail. Additionally, the course explores how cloud and edge computing contribute to sustainability by enabling energy-efficient resource management, reducing data transmission overhead, and supporting green IT initiatives. The course also looks at actual use cases from a variety of industries to show how edge and cloud computing technologies are enabling creative solutions and revolutionizing corporate processes.

**Course Code: CIT477**
**Course Name: Natural Language Processing**
**Prerequisites: DSAI215, CIT473**
**Course Description:**
This course explores the theory and practical aspects of processing human language using computational methods. Topics include text preprocessing, language modeling, part-of-speech tagging, syntactic parsing, semantic analysis, and pragmatic analysis. It also covers applications of NLP techniques such as Named Entity Recognition, Question and Answering Systems, Sentiment Analysis, Topic Modeling, and Sentiment Analysis. Students will gain hands-on experience with NLP tools and libraries. The course also explores how NLP can contribute to sustainability by supporting environmental text analysis and informed decision-making.

**Course Code :CIT470**
**Course Name: Data Mining**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description**
This course introduces the principles of data mining to the students. The students will learn preprocessing of data (data cleaning, data reduction etc.) before applying data mining techniques. Some of the data mining techniques covered in this course are classification, association analysis, and clustering.

Students will learn about the social and ethical aspects of data mining. Additionally, the course explores how data mining can support sustainability goals, such as optimizing resource consumption and supporting environmental data analysis.

## Artificial Intelligence Concentration

**Course Code: CIT450**
**Course Name: Machine Learning**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description:**
This course provides a comprehensive overview of machine learning fundamentals, covering supervised and unsupervised learning techniques. Students will learn various algorithms and methodologies, including regression, classification, deep learning, Large Language Models (LLMs), and clustering. Advanced topics such as regularization and reinforcement learning are also explored. In addition, the course integrates sustainable AI practices, utilizing cloud platforms to optimize computational efficiency, reduce energy consumption, and promote responsible data management. Students will apply these techniques in real-world industry scenarios

**Course Code: CIT451**
**Course Name: Computer Vision**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description:**
This course introduces students to the foundational concepts, algorithms, and practical tools in computer vision. Topics include image formation, processing, feature extraction, object detection, and image segmentation. Emphasis is placed on real-world applications using libraries such as OpenCV and deep learning frameworks. The course also explores how computer vision technologies contribute to sustainable development through applications in smart cities, environmental monitoring, and efficient resource management. Students will gain both theoretical understanding and hands-on experience through projects that align with sustainable innovation goals.

**Course Code: CIT453**
**Course Name: Big Data Management**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description:**
This course provides a comprehensive introduction to the concepts of big data management, focusing on the technologies, tools, and challenges involved in handling large-scale structured and unstructured data sets. Students will gain insights into data storage, processing, analysis, and security within big data environments. Students will understand the principles of big data, analyze and manage large datasets using contemporary big data tools, design and implement scalable big data storage solutions, apply security and privacy measures in big data contexts, and evaluate the performance of big data systems. The course also explores how big data can contribute to sustainability by optimizing resource use, improving environmental monitoring, and supporting green

**Course Code:CIT470**
**Course Name: Data Mining**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description:**
This course introduces the principles of data mining to the students. The students will learn preprocessing of data (data cleaning, data reduction etc.) before applying data mining techniques. Some of the data mining techniques covered in this course are classification, association analysis, and clustering. Students will learn about the social and ethical aspects of data mining. Additionally, the course explores how data mining can support sustainability goals, such as optimizing resource consumption and supporting environmental data analysis.

**Course Code :CIT477**
**Course Name :Natural Language Processing**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description**
This course explores the theory and practical aspects of processing human language using computational methods. Topics include text preprocessing, language modeling, part-of-speech tagging, syntactic parsing, semantic analysis, and pragmatic analysis. It also covers applications of NLP techniques such as Named Entity Recognition, Question and Answering Systems, Sentiment Analysis, Topic Modeling, and Sentiment Analysis. Students will gain hands-on experience with NLP tools and libraries. The course also explores how NLP can contribute to sustainability by supporting environmental text analysis and informed decision-making.

# Bachelor of Information Technology (BIT)- Concentration in Networks and Cloud Computing

## Core Courses

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT121**
**Course Name: Introduction to Computer Architecture.**
**Prerequisites: Non**
**Course Description:**
This course introduces the concept of computer as a set of hardware, software and data components integrated through different architecture models. The described hardware components include the processor, the memory and the input/output interfaces while the software components include the operating system, the utility software. The course presents data representation at the machine level and introduces the concepts of digital logic to solve sustainability related scenarios. In addition, the students will be given an overview of the evolution of computers and the associated technologies together with a presentation of future technological trends

**Course Code: CIT122**
**Course Name: Introduction to Database Management Systems**
**Prerequisites: CIT112**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Course Code: CIT123**
**Course Name: Computer Programming and Problem Solving**
**Prerequisites: CIT112**
**Course Description:**
This course provides students with a comprehensive understanding of programming concepts and problem-solving techniques. Students will learn data structures, algorithms, and work with functions, modular design, libraries, handle files and exceptions, and manage dynamic data structures such as stacks, queues, linked lists, and trees. The course also emphasizes the role of programming in developing sustainable digital solutions.

**Course Code: CIT231**
**Course Name: Introduction to Computer Networks**
**Prerequisites: CIT121**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.
**Course Code: CIT241**
**Course Name: Network Security**
**Prerequisites: CIT231**
**Course Description:**
This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.
**Course Code: CIT242**
**Course Name: Systems Analysis and Design**
**Prerequisites: CIT122**
**Course Description:**
This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.
**Course Code: CIT244**
**Course Name: Database Programming**
**Prerequisites: CIT122**
**Course Description:**
This course presents mapping rules to convert conceptual and logical designs to physical designs. It also introduces the principles of normalization and denormalization taking into consideration various techniques which are applied to the different normal forms. The course also addresses the concepts of the PL/SQL procedural language including functions, procedures, cursors, packages, and triggers. In addition, this course discusses database problems and potential solutions and how to improve database performance, productivity, and portability through different integration patterns with DBMSs and programming languages in accordance with software application requirements.
**Course Code: BIT203**
**Course Title: Management Information Systems**
**Prerequisites: CIT100**
**Course Description:**
This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements
**Course Code: CIT234**
**Course Name: Discrete Mathematics**
**Prerequisites: MTH105**
**Course Description:**
This course enables students to strengthen and increase their understanding of discrete mathematics with special emphasis on computer science applications. Binomial Coefficients, Combinations, Permutations, Combinatorial Proofs, Stars, and Bars will be covered in this course. Also concepts Arithmetic, Geometric Sequences, Polynomial Fitting, Solving Recurrence Relations, and Induction. Propositional Logic, Proofs, Graph Theory will be used to solve real-world problems. Additionally, Discrete Math for Sustainable Computing will be presented.
**Course Code: CIT353**
**Course Name: Web Development**
**Prerequisites: CIT123**
**Course Description:**
This course provides practical knowledge for designing and developing web-based applications using modern web development techniques. It focuses on HTML, CSS, and dynamic web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.
**Course Code: CIT354**
**Course Name: Object-Oriented Programming**
**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.
**Course Code:BUS407**
**Course Name: Project Management**
**Prerequisites: BIT203**
**Course Description:**
This course will introduce students to the concepts associated with project management and the practical application of the ideas in the day-to-day planning and execution of projects. The course covers all of the essential aspects of project management, including creating the project scope and schedule, creating a project management plan, developing communications plan, and integration of information technology tools in project management.
**Course Code: CIT362**
**Course Name: Information Security Management**
**Prerequisites: CIT241**
**Course Description:**

This course focuses on the managerial aspects of information security and assurance. Topics covered include access control models, information security governance, and information security program assessment and metrics. Coverage on the foundational and technical components of information security is included in reinforcing key concepts. The course includes up-to-date information on changes in the field, such as national and international laws and international standards like the ISO 27000 series, Risk Management, Security Mechanisms, and Blockchain concepts and applications. Sustainable security practices are emphasized to ensure long-term protection, efficiency, and responsible resource management.

**Course Code: BIM200**
**Course Name: Linear Algebra**
**Prerequisites: MTH105**
**Course Description:**
This course is an introduction to Linear Algebra and some of its applications. The aim is to teach the fundamentals of linear algebra in a way that illustrates their relevance to business mathematics applications. An Introduction to Matrices and Systems of Linear Equations are given with other topics such as Determinants, Linear Transformations, Eigenvectors and Eigen values. Techniques and application of business mathematics of linear algebra for finance sciences, management, and economics.

**Course Code: CIT483**
**Course Name: Internship**
**Prerequisites: 75 credits**
**Course Description:**
This is a supervised course requiring a minimum of 480 hours of structured, industry-based training in Information Technology or related fields. The internship provides students with the opportunity to apply technical skills and academic knowledge to solve real-world IT problems while gaining exposure to current tools, technologies, and practices used in industry, with a focus on sustainability and responsible innovation. Through this experience, students enhance their professional competencies, including teamwork, communication, and time management, and develop an understanding of ethical, social, and environmental considerations in professional IT contexts. Student performance is continuously monitored by an assigned faculty supervisor in collaboration with the workplace supervisor through regular evaluations and progress reviews

**Course Code: CIT472**
**Course Name: User Interface Design**
**Prerequisites: CIT354**
**Course Description:**
This course covers user interface design within the software development process, integrating cognitive theories relevant to effective interaction. It includes usability requirements specification and evaluation, emphasizing a multi-disciplinary approach. Students learn to assess user needs and capabilities and how this influence UI development through iterative design phases such as data gathering, analysis, prototyping, construction, and evaluation. The course introduces green computing principles and eco-friendly design practices. Students will use industry-standard tools such as Figma, Adobe XD, Axure RP, and Sketch for wireframing and prototyping; Miro for collaborative brainstorming and user journey mapping; and Usability Hub or Hotjar for usability testing and feedback gathering.

**Course Code:MTH110**
**Course Name: Calculus I**
**Prerequisites: Non**
**Course Description:**
Calculus is an exciting subject, justly considered to be one of the greatest achievements of human intellect. Today calculus is used not just in the physical sciences, but also in engineering, business, economics, life sciences, and social sciences—any discipline that seeks to understand dynamic phenomena. Part of the aim of this course is to train the student to think logically. Learn to write the solutions of the exercises in a connected, step-by-step fashion with explanatory sentences—not just a string of disconnected equations or formulas. This course is intended to introduce derivatives, one of the two key concepts of calculus. The second is integral. Both key concepts depend on the notion of limit.

**Course Code: CIT478**
**Course Name: Mobile Applications Development**
**Prerequisites: CIT472**
**Course Description:**
This course provides comprehensive knowledge related to designing, developing, and deploying mobile applications and websites, aligning with industry practices. It covers design principles, tools, techniques, and methods for mobile application development, including user interface design, data management, security, privacy, and ethics. Students will gain hands-on experience with industry-standard frameworks, testing tools, and deployment methods, preparing them to create secure, scalable, and sustainable mobile applications for diverse industry sectors.

**Course Code: CIT473**
**Course Name: Introduction to Artificial Intelligence.**
**Prerequisites: 48 credits**
**Course Description:**
This course introduces undergraduate students to the fundamental concepts and techniques in Artificial Intelligence (AI). Students will explore how intelligent systems can be designed to solve problems using methods such as search algorithms, rule-based reasoning, and basic machine learning. The course covers key areas including knowledge representation, natural language processing, and AI applications in areas such as the Internet of Things (IoT) and sustainability. Emphasis is placed on how AI technologies can contribute to addressing global challenges such as energy efficiency, climate change, and smart resource management.

**Course Code: CIT484**
**Course Name: Senior Graduation Project I**
**Prerequisites: 90 credits**
**Course Description:**
This course provides students with the opportunity to explore a chosen area of interest, conduct in-depth research, and demonstrate independent learning, critical thinking, and problem-solving skills. Students will apply research methodologies and concepts acquired in earlier coursework to develop a comprehensive project proposal. The process involves selecting a topic, gathering and analyzing relevant information, formulating a clear problem statement, conducting a literature review, and proposing feasible and innovative solutions. Students are expected to apply appropriate methodologies to analyze the problem and develop an initial system design aligned with sustainability principles. Particular emphasis is placed on incorporating environmental, economic, and social dimensions of sustainability into the project's design and planning. By the end of the course, students will present a preliminary system design and submit a detailed project report that highlights the project's potential contribution to sustainable development goals (SDGs).

**Course Code: CIT485**
**Course Name: Senior Graduation Project II**
**Prerequisites: CIT484**
**Course Description:**
This supervised course is the continuation of Senior Graduation Project I (CIT484), in which students are expected to fully implement their proposed solution. Building on the design phase and documentation developed in SGP1, students will complete the remaining phases of the project, detailed design, system implementation, testing, validation, and final documentation. Throughout the course, students will apply project management practices, adhere to software engineering methodologies, and

receive weekly guidance from their academic supervisor. The course emphasizes sustainable development by encouraging the integration of environmentally and socially responsible practices, such as energy efficiency, ethical data usage, and alignment with national and global Sustainable Development Goals (SDGs). The course fosters teamwork, independent problem-solving, ethical responsibility, and effective communication, equipping students with practical and professional skills essential for real-world IT project execution.

## Elective Courses

**Course Code: CIT352**
**Course Name: Distributed Information Management**
**Prerequisites: CIT231**
**Course Description:**
This course provides a comprehensive examination of distributed information systems, which serve as the backbone of modern global organizations. It addresses the fundamental principles of distributed architecture, processes, communication protocols, consistency models, and fault tolerance mechanisms. Students will analyze components of distributed IT infrastructure, including operating systems, naming conventions, and communication frameworks. Particular emphasis is placed on the integration of sustainability principles, focusing on energy-efficient design, environmentally responsible computing practices, and the selection of sustainable cloud services. The course aims to equip students with both the theoretical foundation and practical insights required to design and manage distributed systems that are robust, scalable, and sustainable.

**Course Code: CIT481**
**Course Name: Contemporary Issues in IT**
**Prerequisites: CIT122**
**Course Description:**
This course introduces the student to theoretical and technological aspects of a variety of trending IT Topics besides professional, social, ethical, privacy, security and reliability concerns. The technological trends studied are like Cloud Computing, Virtualization, Internet of Things (IoT), Big Data, Machine Learning (ML), Artificial Intelligence (AI) and Blockchain. Emphasis is placed on evaluating the business, environmental, and societal impacts of these technologies and understanding strategies for integrating them successfully within organizational and smart city contexts.

**Course Code:CIT474**
**Course Name: Internet of Things**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course introduces the architecture, protocols, and real-world applications of the Internet of Things (IoT). Students will explore core concepts such as connectivity, interoperability, discoverability, security/privacy, and sustainability in IoT ecosystems. Emphasis is placed on IoT applications in smart cities, industry, and environmental monitoring. The student will be presented to some tools used for building IoT setup, such as TinkerCAD, Arduino simulators, Linux OS, and Python programming environments.

**Course Code:CIT487**
**Course Name :Cloud and Edge Computing**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course covers important concepts, architectures, and service models in an in-depth examination of cloud and edge computing. Theoretical lectures, practical exercises, and case studies give students a thorough understanding of the networking, virtualization, and distributed computing technologies that support these paradigms. Working with top cloud platforms and edge computing frameworks to deploy, maintain, and optimize apps is what practical workshops entail. Additionally, the course explores how cloud and edge computing contribute to sustainability by enabling energy-efficient resource management, reducing data transmission overhead, and supporting green IT initiatives. The course also looks at actual use cases from a variety of industries to show how edge and cloud computing technologies are enabling creative solutions and revolutionizing corporate processes.

**Course Code: CIT477**
**Course Name: Natural Language Processing**
**Prerequisites: DSAI215, CIT473**
**Course Description:**
This course explores the theory and practical aspects of processing human language using computational methods. Topics include text preprocessing, language modeling, part-of-speech tagging, syntactic parsing, semantic analysis, and pragmatic analysis. It also covers applications of NLP techniques such as Named Entity Recognition, Question and Answering Systems, Sentiment Analysis, Topic Modeling, and Sentiment Analysis. Students will gain hands-on experience with NLP tools and libraries. The course also explores how NLP can contribute to sustainability by supporting environmental text analysis and informed decision-making.

**Course Code :CIT470**
**Course Name: Data Mining**
**Prerequisites: CIT473 and Completion of 81 credits**
**Course Description**
This course introduces the principles of data mining to the students. The students will learn preprocessing of data (data cleaning, data reduction etc.) before applying data mining techniques. Some of the data mining techniques covered in this course are classification, association analysis, and clustering. Students will learn about the social and ethical aspects of data mining. Additionally, the course explores how data mining can support sustainability goals, such as optimizing resource consumption and supporting environmental data analysis.

## Networks and Cloud Computing Concentration

**Course Code:CIT474**
**Course Name: Internet of Things**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course introduces the architecture, protocols, and real-world applications of the Internet of Things (IoT). Students will explore core concepts such as connectivity, interoperability, discoverability, security/privacy, and sustainability in IoT ecosystems. Emphasis is placed on IoT applications in smart cities, industry, and environmental monitoring. The student will be presented to some tools used for building IoT setup, such as TinkerCAD, Arduino simulators, Linux OS, and Python programming environments.

**Course Code:CIT486**
**Course Name: Network Protocols**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description :**
This applied course introduces students to the concepts, terminology, protocols, and services that the Transmission Control Protocol/Internet Protocol (TCP/IP) suite uses to make the Internet work. This course also stimulates hands-on skills development by not only describing TCP/IP capabilities, but also by encouraging students to interact with protocols. It provides troubleshooting knowledge and tools that network administrators and analysts need to keep their systems running smoothly. Moreover, this course will cover topics ranging from characterization to error detection, security analysis and protocols design for sustainable solutions.

**Course Code:CIT487**
**Course Name :Cloud and Edge Computing**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description**
This course covers important concepts, architectures, and service models in an in-depth examination of cloud and edge computing. Theoretical lectures, practical exercises, and case studies give students a thorough understanding of the

networking, virtualization, and distributed computing technologies that support these paradigms. Working with top cloud platforms and edge computing frameworks to deploy, maintain, and optimize apps is what practical workshops entail. Additionally, the course explores how cloud and edge computing contribute to sustainability by enabling energy-efficient resource management, reducing data transmission overhead, and supporting green IT initiatives. The course also looks at actual use cases from a variety of industries to show how edge and cloud computing technologies are enabling creative solutions and revolutionizing corporate processes.

**Course Code:CIT488**
**Course Name: Network Virtualization**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description :**
This course covers important concepts, architectures, and service models in an in-depth examination of cloud and edge computing. Theoretical lectures, practical exercises, and case studies give students a thorough understanding of the networking, virtualization, and distributed computing technologies that support these paradigms. Working with top cloud platforms and edge computing frameworks to deploy, maintain, and optimize apps is what practical workshops entail. Additionally, the course explores how cloud and edge computing contribute to sustainability by enabling energy-efficient resource management, reducing data transmission overhead, and supporting green IT initiatives. The course also looks at actual use cases from a variety of industries to show how edge and cloud computing technologies are enabling creative solutions and revolutionizing corporate processes.

**Course Code:CIT489**
**Course Name: Advance Network Security**
**Prerequisites: CIT231 and Completion of 81 credits**
**Course Description :**
This course aims to equip the students with the skills needed for analyzing and examining networks' vulnerabilities and designing secured networks for critical applications. The course focuses on practical experience to meet objectives. Network elements attacks along with protection approaches are addressed: servers, database, operating system, mainframes, and others. Designing secured networks are studied while considering exploiting vulnerabilities with the Nmap scripting engine. Additionally, the course explores sustainable network design practices, such as energy-efficient security solutions and minimizing the environmental impact of network infrastructures.

## Diploma of Information Technology

**Course Code: CIT112**
**Course Name: Introduction to Computer Programming**
**Prerequisites: Non**
**Course Description:**
Introduction to Computer Programming (ICP) is an introductory course designed to provide students with fundamental knowledge and skills in computer programming. The course covers key programming concepts, including problem-solving techniques, algorithm development, pseudocode, flowcharts, programming syntax, variables, data types, control structures, loops, arrays and functions. Students will build practical skills and explore how programming can support real-world and sustainability-focused solutions.

**Course Code: CIT121**
**Course Name: Introduction to Computer Architecture.**
**Prerequisites: Non**
**Course Description:**
This course introduces the concept of computer as a set of hardware, software and data components integrated through different architecture models. The described hardware components include the processor, the memory and the input/output interfaces while the software components include the operating system, the utility software. The course presents data representation at the machine level and introduces the concepts of digital logic to solve sustainability related scenarios. In addition, the students will be given an overview of the evolution of computers and the associated technologies together with a presentation of future technological trends.

**Course Code: CIT122**
**Course Name: Introduction to Database Management Systems**
**Prerequisites: CIT112**
**Course Description:**
This course introduces the fundamental concepts of database systems, including database architecture, data models, and system components. It emphasizes the design of efficient relational databases using ER diagrams and their conversion into optimized schemas. Students will learn various normalization techniques to ensure data integrity, minimize redundancy, and support sustainable data storage. The course also provides a solid foundation in relational algebra and hands-on experience in SQL programming.

**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code: CIT231**
**Course Name: Introduction to Computer Networks**
**Prerequisites: CIT112**
**Course Description:**
In this course students are going to be introduced to the basic computer network concepts and elements. Students will be taught the characteristics of network models, topologies, network devices, data transmission, and communication protocols going through more detail about IP addressing. Students will be introduced to network simulation tools to apply their theoretical knowledge to practical aspects. This course will also explore the concept of basic network data security, privacy, and sustainable networks.

**Course Code: CIT232**
**Course Name: Introduction to Operating Systems**
**Prerequisites: DSAI121**
**Course Description:**
This course introduces the core concepts of operating systems and their functions such as memory management, process management and scheduling, handling concurrency and synchronization, file systems, input, and output device management. The course also covers the role of operating systems in management of security and privacy of users and network functions.
Additionally, this course emphasizes the role of operating systems in promoting sustainable computing practices, including efficient resource utilization, energy-aware process scheduling, and support for green IT infrastructures. Industry-relevant examples such as mobile operating systems (Android), virtualization platforms (VMware, Docker), and cloud infrastructure (AWS, Azure) will be introduced to help students relate OS concepts to real-world applications.

**Course Code: CIT233**
**Course Name: Software Development Process**
**Prerequisites: CIT112**
**Course Description:**
This course presents an introduction to the models, processes,

and techniques used in developing software systems. It covers the entire life cycle of software systems, from project proposal and requirements analysis through design, development, testing, release, and maintenance. Students are introduced to industry-standard techniques such as fact-finding, software modeling, verification and validation, and system documentation. In alignment with the UAE's sustainability vision and the UN Sustainable Development Goals, this course incorporates eco-conscious software engineering principles. Students are exposed to the Software Carbon Intensity (SCI) Tool from the Green Software Foundation, enabling them to evaluate and reduce the environmental impact of their software designs.

**Course Code: CIT241**
**Course Name: Network Security**
**Prerequisites: CIT231**
**Course Description:**
This course provides a foundational understanding of information and network security principles. It introduces key security concepts, terminology, and models essential for recognizing and addressing modern security challenges. Further, it explores various types of threats, including network attacks, computer-based attacks, and social engineering techniques. The course covers basic cryptographic methods, server vulnerabilities, and both wired and wireless network security infrastructure. Emphasis is placed on authentication mechanisms, vulnerability assessments, and the design and implementation of sustainable security solutions for stand-alone and networked systems.

**Course Code: CIT242**
**Course Name: Systems Analysis and Design**
**Prerequisites: CIT233**
**Course Description:**
This course introduces the principles and design techniques of object-oriented development approaches. It focuses on the process of developing information systems using object-oriented system analysis and design techniques based on the Unified Modeling Language (UML). Students will learn key concepts and methods used in the object-oriented system development process, including problem identification, application of object-oriented concepts and tools in problem solving, data gathering, modeling, analysis, project management, and design. The course also covers UML diagrams, validation techniques to assess model quality, and methods to ensure system requirements are met. Additionally, sustainable application design principles are emphasized to create reliable, long-term solutions.

**Course Code: CIT243**
**Course Name: Network Administration**
**Prerequisites: CIT231**
**Course Description:**
This course introduces concepts and technologies behind domain-based enterprise networks. The course covers installation, configuration and administration of enterprise network operating systems and protocols, and services such as active directory, group policies, data storage, backup and disaster recovery to the level required to effectively administer a secured domain-based enterprise networks for both traditional networks and green networks.

**Course Code: CIT244**
**Course Name: Database Programming**
**Prerequisites: CIT122**
**Course Description:**
This course presents mapping rules to convert conceptual and logical designs to physical designs. It also introduces the principles of normalization and denormalization taking into consideration various techniques which are applied to the different normal forms. The course also addresses the concepts of the PL/SQL procedural language including functions, procedures, cursors, packages, and triggers. In addition, this course discusses database problems and potential solutions and how to improve database performance, productivity, and portability through different integration patterns with DBMSs and programming languages in accordance with software application requirements.

**Course Code: BIT203**
**Course Title: Management Information Systems**
**Prerequisites: CIT100**
**Course Description:**
This course is designed to introduce the Management Information systems concepts within the context of the business environment. It provides comprehensive and integrative coverage of essential new information technologies and their impact on business models and managerial decision-making. The course provides an integrated framework by showing how information systems are composed of management, organization, and technology elements

**Course Code: CIT353**
**Course Name: Web Development**
**Prerequisites: CIT123**
**Course Description:**
This course provides practical knowledge for designing and developing web-based applications using modern web development techniques. It focuses on HTML, CSS, and dynamic web content through interactive web technologies. Students will learn how to build dynamic web applications that integrate with databases. Throughout the course, students will work with advanced web techniques and technologies to develop a dynamic web application, including client-side tools, server-side technologies, and database connectivity. The course also introduces the concept of sustainable web design, emphasizing efficient coding practices and environmental considerations in web development.

**Course Code: CIT354**
**Course Name: Object-Oriented Programming**
**Prerequisites: CIT123**
**Course Description:**
This course introduces the fundamental concepts of Object-Oriented Programming (OOP) using the Java programming language. It covers essential OOP principles such as classes, objects, encapsulation, method overloading and overriding, static methods, inheritance, polymorphism, abstract classes, and interfaces. Students will also explore input/output (I/O) operations using Java streams and learn how to connect and interact with relational databases using JDBC. In addition, the course teaches good practices in Graphical User Interface (GUI) development and emphasizes building real-world applications using a modular, object-oriented approach. Students are encouraged to develop solutions that contribute to sustainability and responsible digital innovation.

**Course Code: CIT365**
**Course Name: Advanced Database Design**
**Prerequisites: CIT244**
**Course Description:**
This course offers an in-depth exploration of advanced database design, with a particular emphasis on data warehouse architecture and implementation using industry-relevant tools. Students will engage in conceptual, logical, and physical design stages while examining key topics such as big data management, database administration, and integration with web services. Practical skills will be developed through hands-on use of platforms such as MySQL, Oracle, and Microsoft SQL Server for relational databases, and Power BI for business intelligence and dashboard creation. The course also introduces NoSQL systems (e.g., MongoDB) and cloud-based environments (e.g., AWS, Google Cloud, or Azure) to emphasize sustainable data storage and processing. Sustainable database design principles, including energy efficiency, optimized queries, and responsible cloud resource use are woven throughout the course to prepare students for building scalable, high-performance, and

environmentally responsible data systems.

## Diploma in Computer Graphics & Animation

**Course Code : CGA101**
**Course Name : Introduction to Visual Communication**
**Prerequisites: Non**
**Course Description**
This course is an introductory visual communication design course that provides students with the practical knowledge and critical skills necessary to effectively consider visual design as an essential and inevitable component of their work as designers and visual advertising practitioners.

**Course Code : CGA111**
**Course Name: Storyboarding for Film & Animation**
**Prerequisites: Non**
**Course Description**
To enable students to gain an understanding of the role of pre-production in the creation of time-dependent scenes.
The course will also provide the students with an opportunity to practically realize a storyboard utilizing film language and shot description.

**Course Code : CGA 125**
**Course Name: Digital Image Editing**
**Prerequisites: Non**
**Course Description**
This course describes the concept of a bit-mapped image – resolution, bit depth, color channels and photo retouching describing the main uses of this technique. Covering digital image manipulation and editing techniques such as selection and masking specific areas of an image for protection, the course also looks at the major problem causes of photographic images & their correction. Several advanced manipulation techniques are discussed, and students are given the opportunity to see first- hand examples of image problems and correct these in practical sessions.

**Course Code : CGA107**
**Course Name: Introduction to Web Design**
**Prerequisites: Non**
**Course Description**
This course examines the role of a website in various fields such as advertising, retail, education, news, and media, it introduces the basics of web design with HTML and CSS.
The theoretical part of the course seeks to expound upon the significance of web design as a discipline, together with its main sociological implications. The course, however, places its main emphasis on the practical aspects relating to the topic/field, allowing students to acquire the skills necessary for the creation of basic, functional, and aesthetically pleasing websites.
In this course, students will use a variety of design software to organize, create, publish, and manage a website. Course content considers usability issues in websites, and includes creating a variety of graphic elements, including video, animations, slideshow, rollover effects, backgrounds, and page images, to ensure that students can produce well-founded and interactive web pages and websites.

**Course Code : CGA 108**
**Course Name : Desktop Publishing**
**Prerequisites: CGA101**
**Course Description :**
This course describes the main issues and technologies related to the use of appropriate graphic images within the context of printed media. It covers the role of printed media in various fields, the components of printed media, page layout considerations for printed media, desktop publishing technology, print media for specific markets, and the print process.

**Course Code:CGA135**
**Course Name: 2D Vector Graphics**
**Prerequisites: CGA101**
**Course Description**
This course explains the concept of vector graphics, 2D vector graphic primitives, vector graphic attributes, operations on vector objects, creating complex objects by combining simple geometric primitives and rasterizing vector graphics for display at multiple resolutions.

**Course Code: CGA145**
**Course Name: 2D Animation**
**Prerequisites: CGA101**
**Course Description**
This course explains the concepts of 2D animation – layout and compositing. It also covers cartoon animation, key frames, tweening and timelines & events within an animation.

**Course Code: CGA 155**
**Course Name : 3D Modeling**
**Prerequisites: Non**
**Course Description**
This course explains the 3D workspace, wireframe modeling and rendering. It also describes 3D graphic primitives, combining 3D primitives to form solid models, the camera in a 3D scene and simple shading concepts.

**Course Code : CGA 205**
**Course Name : Typography and Art of Arabic Calligraphy**
**Prerequisites: CGA125 OR CGA135**
**Course Description**
In this course, students utilize computers in an advanced manner that explores more complex design problems. Students learn the discipline, function, and tradition of typography as it relates to visual verbal communications topics include historical revolution of typography, communication, legibility, languages sequence and information hierarchy. Students will learn the study of problem solving as well as the methodology of design thinking.

**Course Code : CGA 215**
**Course Name : Digital Video Editing**
**Prerequisites: CGA101**
**Course Description:**
This course explains the digital video workflow – capture, scene identification, editing and final assembly.
It also explains the benefits of digital video over analogue video, digital video formats, non-linear editing
& edit decision lists and digital effects for video (transitions, wipes, fades, subtitles, and text).

**Course Code : CGA 245**
**Course Name : Principles of Texture, Materials & Lighting**
**Prerequisites: CGA155**
**Course Description:**
This course explains how to create textures from 2D raster and vector images, apply texture maps to 3D models – coloring a scene, create realistic material textures – bump mapping & displacement mapping, apply lighting in a 3D scene and apply shading – Gouraud, Phong, Ray-tracing & Radiosity.

**Course Code: CGA 225**
**Course Name: 3D Animation**
**Prerequisites: CGA155**
**Course Description**
This course explains the 3D animation process – assembly, position and synchronization. It also covers manipulating the camera position over time, timelines for 3D scenes, simple scripting of 3D objects within a timeline and exporting a final movie as digital video.

**Course Code: CGA235**
**Course Name : The Human Form & Character Animation**
**Prerequisites: CGA155**
**Course Description**
This course explains the human form – anatomy, skeleton, and muscle structure. It also explains the animation of human joins, forward an inverse kinematics in animation and the motion capture (Mocap) process & applying Mocap data to 3D models.

**Course Code : CGA 255**
**Course Name: Special Effects for Film**
**Prerequisites: CGA 101**
**Course Description**
This course explains the role and purpose of special effects, visual effects and the digital workflow – pre and postproduction considerations. It also explains the effects for specific applications – motion blur; lens effects; color and lighting effects. It also covers Overlays and chroma keying – recording action against a blue or green screen for the purpose of superimposing additional footage later on.
**Course Code : CGA 265**
**Course Name : CGA Internship**
**Prerequisites: 12 core courses**
**Course Description**
This course supervises work experience in the field of Computer Graphics and Animation. It offers important benefits to the graduating student, including the opportunity to earn credit while exploring a career in Computer Graphics and Animation and a chance to apply concepts learned in the Associate of Science Degree Program to real problems faced by firms.

# COLLEGE OF MEDICAL AND HEALTH SCIENCES

## Bachelor of Science in Health Management and Informatics

### Basic Science Courses for Medical Courses

**Course Code: BSC 120**
**Course Title: Physics for Health Sciences**
**Prerequisites: None**
**Course Description:**
This course is designed to introduce the physics of units of forces, energy changes in the body, heat loss from the body, and breathing mechanism. It helps the students acquire knowledge about electric signals of the body, general properties of sound in the body as a drum (percussion in medicine) and vision defects and corrections. Moreover, this course introduces light, vision, sound and atomic excitation.

**Course Code: BSC 121**
**Course Title: Chemistry for Health Sciences**
**Prerequisites: None**
**Course Description:**
This course will introduce basic theoretical principles of modern chemistry, integrated with descriptive and practical aspects. Topics discussed include stoichiometry, atomic theory and the structure of matter, the Periodic Table, chemical bonding, kinetic-molecular theory and the states of matter; gas laws, solutions, oxidation-reduction, acid-base systems, and thermochemistry. Emphasis is on both qualitative and quantitative aspects of chemistry. Laboratory sessions are designed to complement and supplement theoretical concepts presented in lectures and to develop skills in laboratory technique, observation and data analysis.

**Course Code: BSC122**
**Course Title: Biology for Health Sciences**
**Prerequisites: None**
**Course Description:**
This course will introduce students to basic aspects of human biology. It commences with a general introduction to life, its chemical and biological basis, and the meaning of its unity and diversity. Cells, as the building blocks of living matter, will be discussed at length in terms of their structure, function, classification, physiology, genetics, and reproduction. Moving up the biological hierarchy, tissues constituting the human body will be discussed at length. Higher levels of organization like organs and organ systems will also be addressed in some detail

**Course Code: BSC 220**
**Course Title: Biostatistics**
**Prerequisites: None**
**Course Description:**
This course aims to provide students the skills needed to analyze medical literature by understanding the fields of biostatistics such as data types, observational studies, inferential statistics, regression techniques, evaluating a cohort study and determinants of health. The course emphasizes principles of statistical reasoning, underlying assumptions and hypotheses, and interpretation of results. Topics covered include descriptive statistics, graphical displays of data, introduction to probability, expectations and variance of random variables, confidence intervals and tests for means, differences of means, proportions, differences of proportions, chi-square tests for categorical variables, regression and multiple regressions and an introduction to analysis of variance. Statistical software will be used to supplement manual calculation. Perform inference on population means and proportions via sample data; statistical hypothesis testing and its application to group comparisons; issues of power and sample size in study designs; and random sample and other study types. While there are some formulae and computational elements to the course, the emphasis is on interpretation and concepts.

**Course Code: BSC 221**
**Course Title: Research Methods for Health Sciences**
**Prerequisites: BSC220**
**Course Description:**
This is an introductory course to clinical research providing a comprehensive introduction to research methodology, including its theoretical foundation, fundamental protocols, and evidence-based practice (EBP). The course offers a practical approach to the identification, organization, and critique of such evidence. Also, in this course, students learn about research methodologies, which include pure and applied research, and interactive process of research writing. The distinction between quantitative, qualitative, and mixed method approaches is emphasized in this course. The course also teaches students how to review literature and to write a research proposal.

### Basic Medical Science Courses for all Medical Programs

**Course Code: BMS 110**
**Course Title: Medical Terminology**
**Prerequisites: None**
**Course Description:**
This course introduces students to the language of medicine, were gain of understanding several terms: prefixes, suffixes, and word roots are valuable to build and analyze medical words and terms associated with the body as a whole. Accordingly, student will define, interpret, and pronounce medical terms relating to structure and function, pathology, diagnosis, clinical procedures, oncology, and pharmacology. In addition to medical terms, common abbreviations applicable to each system will be interpreted

**Course Code: BMS121**
**Course Title: Human Anatomy**
**Prerequisites: BMS 110**
**Course Description:**
This course is designed to give the student a sound background in structure of the human body as a whole. Anatomy is the most fundamental of all medical sciences. It provides the basic framework of terminology and vocabulary used in all descriptions and communications about the body. The course will describe the structure, composition, and functions of the organ systems of the human body and how the organ systems function and interrelate. The course will also describe how humans adapt through their anatomical design.

**Course Code: BMS 122**
**Contact Hours/Week: Lectures (3 hours)**
**Prerequisites: MS 110**
**Course Description:**
This course is designed to provide the students with knowledge of the functions and mechanisms of various parts and organs of the human body. In addition, the course introduces the students to the integrity of the body systems as a whole in order to recognize the physiological changes that occur within the human body and how the body systems work. Students cover the topics of body mechanism, basic chemistry, function of the human body such as, cells and tissues, skin and body membranes, skeletal system, muscular system, nervous system with special senses, and the function of endocrine system, circulatory system with blood, body defenses, respiratory system, digestive system including body metabolism, urinary system, and a unit on human body reproduction.

**Course code: BMS 123**
**Course Title: Biochemistry**
**Prerequisites: BSC 121**
**Course Description:**
In this course, students are introduced to the general principles of biochemistry while linking them back to the physiological conditions of an organism. There are several topics designed into this course, relationship of biochemistry to the physiology of an organism, relationship of bioenergetics to the physiological

state, regulation of rates through the metabolic pathways, and relationship of enzyme structure to catalysis and regulation. Description of the chemistry underlying most of the metabolic reaction's role of DNA, RNA, and protein synthesis in the observed physiologic state Role of DNA in inheritance and genetic manipulation and gene therapy Students will know the basic information related to the following terms: saccharides, lipids, proteins, and nucleic acids. In addition, enzymes, vitamins and how they work in the human body. Biochemistry also introduces essential information related to chemical combinations, biomaterials, classification, chemical structure, reactions and how the human body metabolizes such bio molecules.

**Course Code: BMS 124**
**Course Title: Introduction to Microbiology**
**Prerequisites: None**
**Course Description:**
This course is designed to provide an extensive overview of the microbial structure, functioning, and diversity of microorganisms, growth and pathogenesis and immunology are presented with important bacterial, viral, parasitic and mycotic infections discussed from the standpoint of aetiology, epidemiology, and pathogenesis and laboratory diagnosis. The Topics include microbial cell structure and function, metabolism, microbial genetics, and the role of microorganisms in disease, the environment and other selected areas.

**Course Code: BMS 410**
**Course Title: Pathology**
**Prerequisites: BMS 121 & BMS 122**
**Course Description:**
The goal of this course is to develop an understanding of the causes and mechanisms of human diseases and associated alterations of structure and function of tissues. This involves first, the general pathology during which cell injury, adaptation, cell death, repair, inflammation, and neoplasia are introduced. Then, diseases and tumors of general interest affecting different body systems such as immune system, digestive, respiratory and cardiovascular system are studied.

**Course code: BMS 411**
**Course Title: General Pharmacology and Toxicology**
**Prerequisites: BMS 122**
**Course Description:**
This course is designed as an introduction to pharmacology and toxicology and deals with pharmacodynamics, pharmacokinetics, clinical/therapeutic uses and toxicology of drugs, Pharmacology is broadly defined as the effect of drugs and chemicals on living organisms. It gives specific information concerning cardiopulmonary, vascular, central and peripheral nervous system, and antimicrobial drug classifications as well as common examples in each category. With each classification of drugs covered, their mode of action, their clinical effects and side effects will be emphasized.

## Core Major Courses

**Course Code: ACC106**
**Course Title: Accounting Principles 1**
**Prerequisites: Nil**
**Course Description:**
This course is an introduction to financial accounting methods such as recording and book- keeping in the journal, ledger, and trial balance in accordance with the International Financial Reporting Standards (IFRS). This course is designed to help students apply the appropriate accounting treatment for both adjusting and closing operations. It also helps students in recording business transactions of merchandising companies, calculating cost of inventories, and illustrating internal control and bank reconciliation statement.

**Course Code: HCM 120**
**Course Title: Principles of Health Management**
**Prerequisites: Nil**
**Course Description:**
This course is designed to introduce students to key concepts related to the principle of health management, including concepts, issues, organizations, policies, strategies of health management approaches. The provided knowledge will deal with discipline matters of management principles applied to health services offering students an exploration of an overview of health management, strategic management, decision-making, assessment of information need, human resource management, leadership, team building, health management conflict, time management, operational health planning, program monitoring and evaluation.

**Course Code: ACC200**
**Course Title: Accounting Principles 2**
**Prerequisites: ACC106**
**Course Description:**
This course introduces advanced accounting concepts to students, including different forms of ownership, cash flows statemen, financial analysis, accounting for manufacturing operations. The purpose of this course is to provide the students with the basis of accounting skills required in Business Administration to be used in the business environment for decision making.

**Course Code: HRM 201**
**Course Title: Introduction to Human Resource Management**
**Prerequisites: None**
**Course Description:**
This course introduces various areas of human resource management including its strategic role, job analysis, training and development, HR planning and recruitment, employee selection, training and developing employees, performance management, strategic pay plans, employee relations, and employee safety & health in the workplace.

**Course Code: HIM210**
**Course Title: Introduction to Healthcare Informatics**
**Prerequisites: CIT 100**
**Course Description:**
This course is an introduction to the health information management profession and the heath record focusing on procedures for completion, maintenance, and preservation of health information in the UAE. The relationship between health information management and the health care delivery system in the UAE and other countries will be discussed. Topics covered include the content and structure of patient records; quantitative and qualitative analyses of the documentation of patient care; storage methods; and retrieving patient data. There will also be a discussion of clinical classification types employed in Health Information Management.

**Course Code: HCM 211**
**Course Title: Healthcare Services Management**
**Prerequisites: HCM 120**
**Course Description:**
The market for health services is global and growing. Demographic changes and advances in health service knowledge are driving a need for health service managers who can organize large and complex operations and coordinate diverse professions exist in healthcare entities.

Demand for health services continues to be strong internationally across public, private, and not-for-profit sectors. This course is designed to support students who wish to move into managerial positions within the health services industry; complementing previous professional/academic qualifications or building upon workplace experience. It combines insights to both public and private healthcare services with contemporary management theory.

This course is designed to develop students' skills in both strategic and operational issues pertaining to healthcare services. Students will study the importance of blending technology, people, marketing, and information to achieve a distinctive competitive outcomes and high standards of

healthcare quality. Concepts taught include service management, service quality, customer satisfaction, and developing service/qualify solutions for healthcare providers.

**Course Code: HCM 212**
**Course Title: Healthcare Delivery System**
**Prerequisites: HCM 120**
**Course Description:**
This course is designed to optimize students' views regards the health care system and how it is delivered. It demonstrates an overview of the health care delivery system and how performance assessing and how process improvements could be managed. It provides an overview of the health care systems and its components in the United Arab Emirates with emphasis on the types of providers and the role that accrediting, and licensing bodies play in the delivery of health care. The course focuses on the unique characteristics of health care delivery and discusses the major issues and challenges that impact the cost, quality, and access to health care. Emphasis is placed on understanding the historical context; how the UAE health care system developed; and the significant policies that regulate health care organizations, providers, payers, and populations. Students are introduced also to general technology, financial, reimbursement, legal, and strategic planning issues that are essential to managing in the health care environment.

**Course Code: HCM 224**
**Course Title: Legal Aspects and Ethics in Health Management**
**Prerequisites: HCM 120**
**Course Description:**
This course is designed to provide students with an introduction to health law and ethics. It starts with ethical theories, principles, and tools that are important when making ethical decisions. Then explores privacy and confidentiality within the context of the many uses of health information, and covers ethical dilemmas faced in the process of protected health information, clinical coding, pricing, access, and quality management. It addresses the importance of patient safety and organizational values, research, and decision support for data acquisition, access, and reporting. The course will include a discussion of the UAE system of laws and regulations of healthcare providers; legal and ethical issues in providing health care services to patients; legal and ethical issues in organizing, managing, and regulating the delivery of health care services; and legal issues in health insurance programs.

**Course Code: HCM 225**
**Course Title: Hospital Administration**
**Prerequisites: HCM 120**
**Course Description:**
As rapid Scientific, technological, and medical advances in recent years have completely transformed the health care sector. Hospitals have become a dynamic industry. Professionals who are responsible for planning and designing hospitals and those who subsequently manage, maintain, and operate them efficiently find the task of managing change quite challenging. This course is a broad subject that will let students understand the basics as well as the complexities of managing a hospital well. It has lots of ideas for the architect, who conceives of a viable plan for the hospital. It addresses the various issues which must be kept in mind by consultants, planners, and administrators who subsequently run the hospital. This course will cover most, Planning and Designing a hospital: The Correct Way, Planning and Designing Medical and Ancillary Services, Planning and Designing Nursing Services, Supportive Services, Facilities Planning for Managing SARS, CATH Lab, Hospital Information System, and Telemedicine.

**Course Code: BAF301**
**Course Title: Introduction to Financial Management**
**Prerequisites: ACC106**
**Course Description:**
This course is prepared to equip students with the fundamentals of financial management. It includes an overview of financial management, analysis of financial Statement, time value of money, risk and return, working capital management, financial statement analysis, sources of finance, and capital budgeting.

**Course Code: HCM 307**
**Course Title: Introduction to Health promotion and Disease Prevention**
**Prerequisites: BMS 110**
**Course Description:**
This course is designed to introduce the basics principle of disease management responsible for efficient and systematic control of the creation. The course will orientate the students to critical concepts of self-management and health promotion, and explore the nature of the multidisciplinary team, maintenance, use and disposition of records, including processes for capturing and maintaining evidence and information about how to prepares students for the practice in the field of symptom management of people with chronic disease and/or life-limiting illness (LLI) and palliative care, and lays the foundation for further study in this field. The course as well will focus on the health promotion and models of health promotion, and principles of health behavior change, to encourage the individual to adopt healthy behaviors.

**Course Code: HCM 312**
**Course Title: Medical Insurance Systems**
**Prerequisites: HCM 120**
**Course Description:**
This course introduces students to the problem of risk, and health insurance, medical health insurance, and disability income insurance, and other topics such as social insurance programs, the private insurance industry, and regulation of insurance industry. Additionally, it explores methods such as health insurance claim processing and treatment approval. The course uses the understanding of the general principles of health insurance as a tool to understand the cooperative health insurance program implemented in the UAE.

**Course Code: HCM 320**
**Course Title: Management Processes in Health Service Organizations**
**Prerequisites: HCM 120**
**Course Description:**
This course is providing students with the tools to significantly improve health care organizational operations and processes as well as enhance quality and customer satisfaction by ensuring that services are tightly synchronized with patterns of patient demand. This course will cover the application of the concepts and methods of operation management to the health care organizational setting with an emphasis on planning and control in the management process. Students are taught to identify common bottlenecks and constraints and focus on the critical issues and processes faced by managers in the health care field.

**Course Code: HIM320**
**Course Title: Medical Coding I**
**Prerequisites: HIM 210**
**Course Description**
This course introduces students to the International Classification of Disease (ICD-10-CM) coding system. Topics covered include the guidelines and terminology for correctly coding diagnoses in a physician's office, hospital, or other healthcare facility as well as the assigning and sequencing of diagnostic and procedural codes. Emphasis will be on the recent change from ICD-9-CM to ICD-10-CM and the implications of this change.

**Course Code: HIM321**
**Course Title: Health Data Concepts**
**Prerequisites: HIM 210**
**Course Description**
This course introduces students to the International Classification of Disease (ICD-10-CM) coding system. Topics

covered include the guidelines and terminology for correctly coding diagnoses in a physician's office, hospital, or other healthcare facility as well as the assigning and sequencing of diagnostic and procedural codes. Emphasis will be on the recent change from ICD-9-CM to ICD-10-CM and the implications of this change.

**Course Code: HCM322**
**Course Title: Healthcare Economics**
**Prerequisites: None**
**Course Description:**
This course builds on students' previous course and work experiences and introduces students to the concepts and tools needed to provide an opportunity for deepening their understanding of various business and social science theories, principles and models and how they do, or do not, apply within the healthcare sector. The course explores the development and delivery of services, tangible goods and ideas (social marketing) in the health sector by for-profit and non-profit organizations in developed and developing countries. To put knowledge to practice, student teams undertake consulting projects in local healthcare institutions and organizations. The course covered the case studies, readings, lectures, discussions, and web-based sources, therefore, the students become aware of the complexity of decision making in health care, and the development of the value proposition.

**Course Code: HCM 325**
**Course Title: First Aid and Safety**
**Prerequisites: BMS 110**
**Course Description**
As rapid Scientific, technological, and medical advances in recent years have completely transformed the health care sector. Hospitals have become a dynamic industry. Professionals who are responsible for planning and designing hospitals and those who subsequently manage, maintain, and operate them efficiently find the task of managing change quite challenging. This course is a broad subject that will let students understand the basics as well as the complexities of managing a hospital well. It has lots of ideas for the architect, who conceives of a viable plan for the hospital. It addresses the various issues which must be kept in mind by consultants, planners, and administrators who subsequently run the hospital. This course will cover most, Planning and Designing a hospital: The Correct Way, Planning and Designing Medical and Ancillary Services, Planning and Designing Nursing Services, Supportive Services, Facilities Planning for Managing SARS, CATH Lab, Hospital Information System, and Telemedicine.

**Course Code: HIM 410**
**Course Title: Medical Coding II**
**Prerequisites: HIM 320**
**Course Description**
This course is a continuation of Coding I and provides students with an introduction to the nomenclature of Current Procedure Terminology (CPT®). Topics include detailed application of the CPT classification system for inpatient services such as surgery and anesthesia as well as for outpatient such as laboratory and radiology. There will also be a discussion of evaluation and management services, as well as the use of modifiers

**Course Code: HCM 412**
**Course Title: Health Policy**
**Prerequisites: HCM 120**
**Course Description**
This course provides a framework for developing and analyzing a range of health policy issues. The course begins by introducing an approach for rationally analyzing any public health policy issues. The course also has relevant topics on; other models of the policy process and analyzing historical, political, ethical, and legal ramifications, assessing the need and demand, examining economic and financial considerations, assessing existing programs and policies.

**Course Code: HCM 413**
**Course Title: Strategic Healthcare Planning**
**Prerequisites: HCM 120**
**Course Description**
This course provides the basis for understanding what leadership is and what leaders do to be successful. This course will look at how successful leaders develop a vision for the future, align other behind their vision, and motivate them to achieve the vision. This course will review theories of leadership and analyze common strategies used by leaders, both effective and ineffective, as well as address moral and ethical responsibility of leadership.

**Course Code: BUS413**
**Course Title: Leadership**
**Prerequisites: HCM 120**
**Course Description:**
This course provides the basis for understanding what leadership is and what leaders do to be successful. This course will look at how successful leaders develop a vision for the future, align other behind their vision, and motivate them to achieve the vision. This course will review theories of leadership and analyze common strategies used by leaders, both effective and ineffective, as well as address moral and ethical responsibility of leadership.

**Course Code: HIM 411**
**Course Title: Artificial Intelligence in Healthcare Management Transformation**
**Prerequisites: HIM 210**
**Course Description**
This course provides a comprehensive overview of how Artificial Intelligence (AI) is transforming healthcare management. Drawing from best practices in digital transformation and AI strategy, students will examine AI implementation frameworks, emerging technologies, change management, and ethical considerations. Emphasis is placed on strategic integration, operational efficiency, and innovation to prepare future healthcare leaders to oversee and direct digital transformation initiatives.

**Course Code: HCM414**
**Course Title: Information Governance for Health Professionals**
**Prerequisites:HCM120**
**Course Description**
This course introduces students to the global transformation of information in health to electronic formats, health organizations need to invest in improved information governance systems to ensure health data is private and secure. The course will discuss the information governance regulations and policies to support the creation, storage, use, retention, and destruction of healthcare data. The course will cover the principles of information governance, how information governance can support and maintain the information life-cycle, the impact of technology transformation, privacy and security of healthcare data, healthcare policy and other regulatory considerations, risk management and strategy, and building a culture of information governance.

## Bachelor of Science in Emergency Medical Care

### Core Major Courses

**Course Code: ECM 210**
**Course Title: Introduction To Paramedicine**
**Prerequisites: BMS 122**
**Course Description:**
This course introduces the student to the psychological and physical demands of emergency medical provider. It introduces information in preparation for the student's progress throughout the entire paramedic program. Beginning with a basic introduction to the profession and roles and responsibilities, the foundation of knowledge for the emergency medical care systems. Legal and ethical issues related to the patients and duty

of EMS, workforce safety and wellness will be covered.

**Course Code: ECM 211**

**Course Title: Patient Assessment**

**Prerequisites: BMS 122**

**Course Description:**

This course introduces student to the patient assessment undertaken by paramedic. The course provides necessary knowledge and skills for patient assessment and re-assessment including scene size-up, primary and secondary assessment as overview for a trauma and medical patient.

**Course Code: ECM 220**

**Course Title: Airway & Respiratory Emergencies**

**Prerequisites : EMC210 + ECM211**

**Course Description:**

This course is designed to provide the students with the essential knowledge to evaluate and deal with airway and respiratory emergency medical cases including pathophysiological interpretation and assessment. These are emergencies of the upper and lower airway that compromise the respiratory system

**Course Code: ECM 221**

**Course Title: Trauma I**

**Prerequisites :EMC210 + ECM211**

**Course Description:**

This course introduces the Paramedic Student to Trauma and Trauma Systems. It prepares students to Perform Comprehensive Patient Assessment with various Injury Patterns, recognizing various mechanisms of injuries like Blunt Trauma, Penetrating Trauma, and managing Bleeding with External and Internal Haemorrhage, Soft Tissue injuries & Burns, orthopedic injuries and Environmental Injuries

**Course Code: ECM310**

**Course Title: Trauma II**

**Prerequisites: EMC221**

**Course Description:**

This course is designed to provide more focus on practical trauma instruction. It covers: blunt trauma, penetrating trasuma, haemorrhage and shock, soft tissue trauma, burn conditions, musculoskeletal trauma and gaining access and extrication. It also covers the initial aspect of students traumatic skills related to the above topics.

**Course Code: HCM 323**

**Course Title: Quality Management in Healthcare**

**Prerequisites: NON**

**Course Description:**

This course stresses the importance of continuous improvement of healthcare to avoid medical errors with their associated dilemmas. Introduces the principles of healthcare quality management and its significant role in applying evidence-based healthcare practices. It provides the students with essential tool and skills to monitoring, managing, measuring and improving the performance of healthcare organizations and professionals.

Meeting patient's needs and expectations and adopting effective functions and processes that increase the probability of achieving the desired healthcare outcomes, and create Patient Safety Culture in healthcare entities. It stresses the importance of "Lean Healthcare" and the Total Quality Management" to manage healthcare variations and ensure high standard of healthcare quality and many other approces derived from them such as "error proofing, Six Sigma, Visual Management, Standardization, 5S, and Kanban.

**Course Code: HCM212**

**Course Title: Healthcare Delivery System**

**Prerequisites: None**

**Course Description:**

This course is designed to optimize students' views regards the health care system and how it is delivered. It demonstrates an overview of the health care delivery system and how performance assessing and how process improvements could be managed. It provides an overview of the health care systems and its components in the United Arab Emirates with emphasis on the types of providers and the role that accrediting, and licensing bodies play in the delivery of health care. The course focuses on the unique characteristics of health care delivery and discusses the major issues and challenges that impact the cost, quality, and access to health care. Emphasis is placed on understanding the historical context; how the UAE health care system developed; and the significant policies that regulate health care organizations, providers, payers, and populations. Students are introduced also to general technology, financial, reimbursement, legal, and strategic planning issues that are essential to managing in the health care environment.

**Course Code: ECM 311**

**Course Title: Cardiovascular I**

**Prerequisites :EMC220**

**Course Description:**

This course focuses on the cardiovascular anatomy and physiology, conducting system of the heart, electrocardiography, as well as interpretation and the treatment of cardiac arrhythmias, interpretation of 3 and 12 lead EKGs (including injury and ischemia patterns, normal and abnormal findings, and the 12 lead as a diagnostic tool) will be covered. Principles of ACS diagnosis/management will be laboratory focus of this course.

**Course Code: ECM 312**

**Course Title: Medical Emergencies**

**Prerequisites: ECM 220**

**Course Description:**

This course covers medical evaluation and treatment of medical emergencies including pathophysiological interpretation and assessment of pulmonary, neurology, endocrinology, gastroenterology, urology and nephrology, toxicology and substance abuse, Haematology and behavioral disorders. It covers the initial aspect of patient assessment and medical skills related to all above topics.

**Course Code: ECM 313**

**Course Title: Paramedic Clinical Practice I**

**Prerequisites: Level 1-4 Major courses**

**Course Description:**

This course focuses on the cardiovascular anatomy and physiology, conducting system of the heart, electrocardiography, as well as interpretation and the treatment of cardiac arrhythmias, interpretation of 3 and 12 lead EKGs (including injury and ischemia patterns, normal and abnormal findings, and the 12 lead as a diagnostic tool) will be covered. Principles of ACS diagnosis/management will be laboratory focus of this course.

**Course Code: ECM 320**

**Course Title: Obstetrics and Pediatric Emergencies**

**Prerequisites: ECM 312**

**Course Description:**

This course covers medical evaluation and treatment of gynecological, obstetrics, and pediatric patients. Initial patient assessment and medical skills related to all above topics

**Course Code: ECM 321**

**Course Title: EMC Operations I**

**Prerequisites: ECM 221**

**Course Description:**

This course prepares the paramedic student to take part in the management of emergency incidents in pre-hospital environment such as vehicle accidents, other major incidents related to injury triangle (driver, road, vehicle) It covers materials related to ambulance operations, medical incident management, vehicle extrication and special rescue awareness & operations, hazardous materials incidents, disasters, crime scene awareness, rural ems, and responding to terrorist acts. Major topics covered.

**Course Code: ECM 410**

**Course Title: Special Patient Populations**
**Prerequisites: ECM 320**
**Course Description:**
This course covers advanced patient assessment techniques in special patient populations. Topics include initial assessment, medical trauma history, field impression, complete physical exam process, on-going assessment and documentation skills. It also includes scenarios and problem-based assessment management.
**Course Code: ECM411**
**Course Title: Cardiovascular II**
**Prerequisites: ECM 311**
**Course Description:**
This course focuses on advanced cardiology, identification of life threatening and non-life-threatening cardiac emergencies. It includes how to analyze standard 3-lead (revision) and 12-lead Electrocardiogram (EKG) information and determine a plan of action. Management of cardiopulmonary arrest and other cardiovascular emergencies using the American Heart Association standards will be covered.
**Course Code: ECM 420**
**Course Title: EMC Operations II**
**Prerequisites: ECM 321 EMC Operations I**
**Course Description:**
This course prepares the paramedic student to theoretical and practical foundations that are necessary for pre-planning and management of mass gathering events with a special focus on, sports and other mass gathering events. This will also cover management of incidents involving multiple casualties with multiple agencies like police, fire, hazmat, and NDRF. Topics include foundations of disaster planning, incident command system, weapons of mass destruction, response issues, and hazardous materials incidents.
**Course Code: ECM 421**
**Course Title: Trauma III**
**Prerequisites: ECM 310**
**Course Description:**
This course introduces the paramedic student to advanced level of trauma and trauma systems to perform comprehensive patient assessment with various injury patterns, recognizing and managing chest injuries, abdominal, genitourinary, and environmental trauma and managing and resuscitating patient with critical care injuries.
**Course Code: ECM 422**
**Course Title: Paramedic Clinical Practice II**
**Prerequisites: Level 1-7 Major courses**
**Course Description:**
This course prepares the student for paramedic clinical practice that consist of specific number of distributed rotations inside the hospital settings in ERS, ICU, SICU, RICU, PICU, NICU, CCU to perform hands on skills at a basic level such as patient assessment, physical examination, vital signs, and others in the triage section, and performing advanced skills like intravenous insertion, medication administration and advance management of cardiopulmonary emergencies and special consideration situations including paediatrics' and geriatrics, and procedures taught thus far in the program.
**Course Code: ECM 510**
**Course Title: Graduation Project**
**Prerequisites: Level 1-8 Major Courses**
**Course Description:**
This course provides students with the opportunity to apply research skills and carry out a research project related to the major program under the supervision of a faculty member. Students will be required to conduct literature review and perform data collection, statistical analysis, writing up of the research paper. Students participating in research must complete CITI program (https://about.citiprogram.org/en/homepage/) for research ethics and compliance training prior to submitting research proposals.
**Course Code :ECM 511**
**Course Title: Specialized Emergency Care**
**Prerequisites: ECM 421**
**Course Description:**
This course introduces the student to the concepts of involvement in specialized scenarios and situations such as military field medicine including environmental emergencies, aviation medicine, and diving medicine. This course will cover paediatric advanced life support (PALS). It also covers the initial aspect of patient assessment and medical skills related to all above topics.
**Course Code: ECM 512**
**Course Title: Paramedic Clinical Practice III**
**Prerequisites: Level 1-8 Major courses**
**Course Description:**
This course prepares students for paramedic clinical practice that consist of ambulance rotations out of hospital settings in pre-hospital care settings to perform hands on skills at a basic level such as patient lifting and moving, patient assessment, physical examination, vital signs, and performing advanced skills like intravenous insertion, medication administration and advance management of cardiopulmonary emergencies and special considerations situation including paediatrics' and geriatrics, procedures taught thus far in the program.
**Course Code: ECM 520**
**Course Title: Paramedic Clinical Practice IV**
**Prerequisites: Level 1-9 Courses**
**Course Description:**
This course prepares student to advanced paramedic clinical practice that consist clinical/field rotation of 16 weeks period. It is an essential component of the EMCM program, which will serve as a summative or 'capstone' evaluation of their achievement of the objectives and goals of the program.
This paramedic clinical/field internship rotations are intended to offer internship paramedics both a positive learning opportunity and real-life experiences, in assessing, treating and managing real patients while being guided by experienced and competent emergency health care professionals.
The purpose of this rotation is to allow advanced paramedic to act as the 'in charge' medic. They are expected to be able to 'run' the call at the same level of competence as an entry-level paramedic. In addition to the appropriate interaction, assessment and management of all patients, the student should focus on the overall integration of everything they have learned as well as 'scene management'. During this advanced clinical practice rotation, paramedic students should participate in all basic and advanced EMS procedures related to patient assessment and management, ACLS interventions, use of mechanical ventilators, perform neuro-vitals and use advanced monitoring devices.
Students must be exposed to patients of different ages and with various pathologies. Ideally, they should be responding and receiving satisfactory ratings

## Bachelor of Science in Respiratory Care

### Core Major Courses

**Course Code: RCM 220**
**Course Title: Cardiopulmonary Anatomy and Physiology**
**Prerequisites: BMS121, BMS122**
**Course Description:**
This course provides core knowledge of the normal structure and function of the anatomy and physiology of the cardiopulmonary system. The structures and functions of this system will provide a foundation for studies in airway management, respiratory diseases, pulmonary function testing and human physiology, which deal with acid-base, blood gas disturbances and interpretation. Study units will include topics on respiratory system, thoracic cavity, cardiovascular, mechanics of ventilation, gas exchange and transport and pulmonary diffusion of gases.

Clinical application of common anatomical principles will be discussed in this course.

**Course Code: RCM221**
**Course Title: Introduction to Respiratory Care Profession**
**Prerequisites: BMS121, BMS122**
**Course Description:**
This course provides an introduction to the profession of respiratory care with emphasis on the duties, responsibilities, respiratory organizations, historical development of this filed and qualifications of a respiratory therapist. Elementary lung disease processes and basic knowledge on respiratory equipment are also described.

**Course Code: RCM 310**
**Course Title: Respiratory Care Science I**
**Prerequisites: BMS 121, BMS 122 -CR: RCM 220, RCM 311**
**Course Description:**
This course provides the students an introduction to the clinical sciences related to the profession of respiratory care. The course will cover, in detail, the basic principles of gasses, and the clinical use of medical gases (Oxygen, Nitric Oxide, Heliox), humidity and aerosol therapy. Emphasis will be placed on the physical and chemical principles, which influence therapeutic modalities.

**Course Code: RCM 311**
**Course Title: Patient Assessment**
**Prerequisites: RCM 220**
**Course Description:**
This course introduces students to the techniques used in the diagnosis of cardiopulmonary diseases. This course involves a systematic study of bedside assessment, patient history, signs, symptoms, thoracic imaging, laboratory techniques and results, electrocardiograph all of which serve as a foundation for clinical assessment and diagnosis. Other diagnostic techniques which are commonly performed or analyzed by the Respiratory Therapist .

**Course Code: RCM320**
**Course Title: Cardiopulmonary Disease I**
**Prerequisites: RCM 220, BMS 410**
**Course Description:**
The course is to provide students with specific knowledge of cardiopulmonary diseases, which affect ventilation, gas diffusion and respiration. The Course will cover topics of general respiratory pathophysiology, such as obstructive and restrictive lung disease and others. Subsequent topics will concentrate on specific diseases, including their clinical presentation, etiology, diagnosis and management. Knowledge of these diseases, along with an understanding of the function of the normal lung, will provide a foundation for the rational application of therapeutic modalities.

**Course Code: RCM321**
**Course Title: Fundamentals of Polysomnography**
**Prerequisites: RCM 220**
**Course Description:**
This course introduces the students to the physiology of the normal sleep cycle, the clinical assessment of sleepiness, the classifications of sleep disorders and other forms of treatment of sleep disorders. This course also focuses during the laboratory sessions on scoring of polysomnography tracings, applying of therapeutic interventions such titration of CPAP/Bi-Level therapy, and patient education.

**Course Code: RCM 322**
**Course Title: Mechanical Ventilation I**
**Prerequisites: RCM 310, RCM 311**
**Course Description:**
This course is designed to provide students with introductory concepts of mechanical ventilation, such as classification, modes of mechanical ventilation, settings, indication and complications. Basic understanding of the most commonly used ventilators and their clinical application is also covered.

**Course Code: RCM 323**
**Course Title: Respiratory Care Science II**
**Prerequisites: RCM 310, RCM 311**
**Course Description:**
This course introduces students to airway management, lung expansion therapy and airway clearance therapy, topics essential in the practice of respiratory care. The course involves study units in the anatomy of the airways, artificial airways and guidelines for airway management, maintenance of airways, methods of tracheobronchial hygiene and lung expansion therapy. The course will also prepare students for procedures such as arterial and capillary punctures.

**Course Code: RCM324**
**Course Title: Respiratory Care Clinical Practice I**
**Prerequisites: RCM 310 , RCM 311**
**Course Description:**
This field course provides entry-level clinical experience. Topics include basic life support, universal precautions, patient safety, patient's medical record, communication, infection control, medical gas systems and oxygen, humidity and aerosol delivery devices, airway management, lung expansion therapy, tracheobronchial hygiene, and arterial punctures and sampling. The field course also covers basics of mechanical ventilation.

**Course Code: HCM323**
**Course Title: Quality Management in Healthcare**
**Prerequisites: None**
**Course Description:**
This course stresses the importance of continuous improvement of healthcare to avoid medical errors with their associated dilemmas. Introduces the principles of healthcare quality management and its significant role in applying evidence-based healthcare practices. It provides the students with essential tool and skills to monitoring, managing, measuring and improving the performance of healthcare organizations and professionals.

**Course Code: RCM410**
**Course Title: Mechanical Ventilation II**
**Prerequisites: RCM 322, RCM 320, RCM 323**
**Course Description:**
This course is a continuation to the course: Basic Mechanical Ventilation, with emphasis on advanced modes used in mechanical ventilation of various disease states, neonatal, home care, transportation and long-term ventilation. The course also puts emphasis on management strategies of mechanical ventilation according to disease entities.

**Course Code: RCM411**
**Course Title: Respiratory Care Clinical Practice II**
**Prerequisites: RCM 324, RCM 323**
**Course Description:**
This clinical field course is designed to provide clinical experience and patients' outcome evaluation related to delivery of airway pharmacology, transportation of critically ill patients and basic mechanical ventilation, with emphasis on advanced modes, ventilator graphics and management strategies used in mechanical ventilation of various disease.

**Course Code: RCM412**
**Course Title: Patient Care Management Seminar**
**Prerequisites: RCM 320, RCM 322, RCM 323**
**Course Description:**
This seminar provides the student with an opportunity to integrate and to present the medical management related to patients who have cardiopulmonary disorders. Students meet with an instructor to present a patient admission scenario, including the patient history, examination, evaluation, diagnosis, prognosis, and intervention as well as objective determination of success of intervention. Emphasis will be placed on decision making and problem solving as they relate to respiratory care.

**Course Code: RCM413**
**Course Title : Cardiopulmonary Disease II**
**Prerequisites: RCM 320CR: 411**
**Course Description:**

This course is a continuation to the course: cardiopulmonary diseases I (RCM 320). The course is to provide students with specific knowledge of cardiopulmonary disorders and related conditions, which affect ventilation, gas diffusion and respiration. Knowledge of these disorders and conditions, along with an understanding for their clinical presentation, etiology and diagnosis, will provide a foundation for the rational application of therapeutic modalities.

**Course Code: RCM414**
**Course Title: Pulmonary Function Diagnostics**
**Prerequisites: RCM 220 , RCM 320**
**Course Description:**
The course is to introduce students to the methodologies and physiological importance of specialized, diagnostic tests, which are performed in the pulmonary function laboratory. The Course will cover techniques used to gather physiological data, comparing it to normal populations, interpreting and translating this information into a descriptive, diagnostic presentation. Diseases that commonly require pulmonary function tests are described. Bronchodilator studies to determine reversibility of airway obstruction are also presented. The course will cover the principles of measurement of Spirometry, indirect measurement of lung volumes with gas dilution techniques and body plethysmography. It also describes the measurement of pulmonary diffusing capacity using small volumes of carbon monoxide (DLCO) and diagnosis of bronchial hyper-responsiveness in patients with normal spirometry and cardiopulmonary exercise.
**Course Code: RCM 420**
**Course Title: Multidisciplinary Respiratory Care**
**Prerequisites: RCM 410, RCM 323, RCM 413**
**Course Description:**
This course is designed to cover three essential areas in respiratory and critical care practice: Cardiopulmonary Resuscitation, Trauma and Advanced Radiology. These areas need specialized knowledge and in-depth skills to prepare students to the level of advanced standards due to the recent vast development in global health care
**Course Code: RCM421**
**Course Title: Pulmonary Rehabilitation and Home Care**
**Prerequisites: RCM 413**
**Course Description:**
This course provides the knowledge and comprehension of pulmonary rehabilitation, in patients with limiting respiratory conditions in order to improve patients' exercise tolerance and quality of life and reduce breathlessness. It covers patient education and caregiver to maintain the highest possible functional capacity to patients. Topics are: medication regimens, smoking cession, breathing retaining, bronchial hygiene, special equipment set-up and servicing, patient and family education, patient evaluation. This course will also address the respiratory care home care services in terms of procedure, equipment and modalities.
**Course Code: RCM 422**
**Course Title: Pediatric Respiratory Care**
**Prerequisites: RCM 410, RCM 323**
**Course Description:**
This course is designed to cover major aspects of pediatric respiratory care. The course involves the topics about assessment of the child, details of respiratory disorders, cardiovascular disorders and about the acutely ill child. This course will also deal with pediatric advanced life support and management of the pediatric on mechanical ventilator.
**Course Code: RCM 423**
**Course Title: Respiratory Care Clinical Practice III**
**Prerequisites: RCM 411**
**Course Description:**
This clinical practice course provides advanced field experience in respiratory care with a focus on the management, monitoring, and transport of mechanically ventilated patients, as well as long-term respiratory care planning. Emphasis is placed on interpreting ventilator waveforms, hemodynamic data, and implementing evidence-based strategies for patient management in critical care settings. The course also includes clinical exposure to chronic cardiopulmonary care, incorporating discharge planning, rehabilitation, home ventilation, and supportive services. Students will gain hands-on experience in both acute and long-term care facilities, supporting the development of advanced clinical decision-making skills. The course aligns with Sustainable Development Goals (SDG) 3 (Good Health and Well-being) and SDG 10 (Reduced Inequalities), promoting equitable, high-quality respiratory care across diverse healthcare settings.
**Course Code: RCM 424**
**Course Title: Neonatal Respiratory Care**
**Prerequisites: RCM 323, RCM 410, RCM 422**
**Course Description:**
This course is designed to cover major aspects of neonatal respiratory care. The course involves the topics about fetal lung development, fetal circulation, and transition to extrauterine life it also deals with topics about assessment of the neonate, respiratory disorders, cardiovascular disorders. This course will also deal with neonatal resuscitation guidelines and management of the pediatric on mechanical ventilator.
**Course Code: RCM510**
**Contact Hours/Week: Labs (4 hours)**
**Prerequisites: RCM 420, RCM 422**
**Course Description:**
This seminar course provides simulated practice and scenarios of patient care skills in a multimedia setting. It allows students to cover clinical simulation of different patient scenarios related to respiratory care which requires specialized knowledge in solving patient management problems written in a branching logic format. Simulation and role playing of various clinical situations in the lab will enhance the classroom experience and skills.
**Course Code: RCM 511**
**Course Title: Essentials of Critical Care**
**Prerequisites: RCM 420**
**Course Description:**
This course provides the students with core knowledge and skills with different essential monitoring and diagnostic techniques and modalities for critically ill patients in the critical care setting. These include procedures, such, fluid and electrolyte abnormalities, hemodynamic monitoring, bronchoscopy, pleural interventions (chest tube & pleural aspiration) and cardiac outputs
**Course Code: RCM 512**
**Course Title: Respiratory Care Seminar**
**Prerequisites: RCM 422, RCM 420**
**Course Description:**
This seminar course is to discuss specialty topics selected by instructor and students. This course will also offer to students advanced topics presented by specialists- Pulmonologist, Intensivist, neonatologist, Internist, Respiratory Therapists and other medical specialists. This course is to have students discuss, evaluate and gain knowledge from presenting and attending many case studies related mainly on perinatal & pediatric topics, sleep disorders and rehabilitation and home care.
**Course Code: RCM 513**
**Course Title: Graduation Project**
**Prerequisites: BSC 221, Level 1-8 Major Courses**
**Course Description:**
This course provides students with the opportunity to apply research skills and carry out a research project related to the major program under the supervision of a faculty member. Students will be required to conduct literature review and perform data collection, statistical analysis, writing up of the research paper. Students participating in research must

complete CITI program (https://about.citiprogram.org/en/homepage/) for research ethics and compliance training prior to submitting research proposals.

**Course Code: RCM 520**
**Course Title: Respiratory Care Clinical Practice IV**
**Prerequisites: Level 1-9 Courses**
**Course Description:**
This clinical practice course provides a capstone advanced clinical field experience. The clinical time will allow the student to continue their hands-on clinical learning. Emphasis is on respiratory care therapeutic and diagnostic patient care for critically ill patients in different settings. These include procedures, such as hemodynamic monitoring, ECG interpretation, fluid and electrolyte abnormalities, bronchoscopy, pleural interventions in vivo blood gas monitoring and management of trauma and post-cardiothoracic surgical care.

# Bachelor of Science in Medical Diagnostic Imaging

## Core Major Courses

**Course Code: MDI 121**
**Course Title: Medical Physics**
**Prerequisites:**
**Course Description:**
This course introduces fundamental physics concepts, including vectors and kinematic equations for one- and two-dimensional motions. Students will explore Newton's three Laws of Motion, with a focus on free-body diagrams, and understand the relationships between work, energy, and power. The course also covers basic conservation laws of energy and momentum and emphasizes applying mathematical techniques to solve physics problems quantitatively.

**Course Code: MDI102**
**Course Title: Introduction to medical diagnostic**
**Prerequisites:**
**Course Description:**
This course provides a foundational overview of key concepts and principles essential to the field of radiography and medical imaging. Students will explore the historical development of the field, from the discovery of x-rays and radioactivity to the advent of modern imaging modalities. Emphasis will be placed on understanding fundamental patient care principles, effective communication with diverse patient populations, and the legal and safety considerations within a healthcare setting. The course will also introduce the basic principles of image production across various modalities, including radiography, fluoroscopy, computed tomography, nuclear medicine, sonography, magnetic resonance imaging, and positron emission tomography, along with the critical aspects of radiation safety and protection. from the above description please extract 6 course learning outcomes

**Course Code: MDI 202**
**Course Title: Radiation Biology and Radiation Protection**
**Prerequisites: MDI102**
**Course Description:**
This course includes principle of radiological biology and radiation protection The course will provide the theoretical background and training necessary for the radiological protection requirements of both ionizing and non-ionizing radiations used in hospitals.

**Course Code: MDI 211**
**Course Title: Physics of Radiology**
**Prerequisites: MDI 121, MDI 102**
**Course Description:**
This course covers fundamental concepts in medical imaging, including atomic structure, current electricity, and heat. Students will learn about x-ray production, image formation principles, and the interaction of x-ray photons with matter. The course also explores the components and operation of x-ray tubes, as well as the basics of MRI, Ultrasound, and Nuclear Medicine.

**Course Code: MDI 212**
**Course Title: Digital image processing and analysis**
**Prerequisites: MDI 211**
**Course Description:**
This course provides a sound understanding of the physics of Digital Radiography. It explains the principles of digital images acquisition, processing, and display.

**Course Code: MDI 214**
**Course Title: Digital image processing and analysis lab**
**Prerequisites: MDI 211**
**Course Description:**
This course provides hands-on experience with radiographic exposure simulations to explore the fundamental principles of digital image acquisition and processing in radiography. Students will manipulate key exposure factors such as kilovoltage (kVp), milliampere-seconds (mAs), source-to-image distance (SID), focal spot size, and patient density to understand their effects on image quality, including exposure, contrast, sharpness, and noise. Through interactive simulations and guided experiments, students will learn to optimize radiographic techniques for diagnostic accuracy while adhering to the ALARA (As Low As Reasonably Achievable) principle to minimize patient dose. The course emphasizes critical thinking and problem-solving in clinical scenarios, preparing students to apply theoretical knowledge to real-world imaging challenges.

**Course Code: MDI 216**
**Course Title: Principles of Diagnostic Imaging 1**
**Prerequisites: MDI 211**
**Course Description:**
This course provides an in-depth understanding of x-ray technology, covering the basic parts of the x-ray tube and the properties of x-rays. Students will learn about the consequences of scattered radiation, classify image artifacts, and describe the factors affecting radiographic image quality
This course covers fundamental concepts in medical imaging, including atomic structure, current electricity, and heat. Students will learn about x-ray production, image formation principles, and the interaction of x-ray photons with matter. The course also explores the components and operation of x-ray tubes, as well as the basics of MRI, Ultrasound, and Nuclear Medicine.

**Course Code: MDI 218**
**Course Title: Principles of Diagnostic Imaging 1 -Lab**
**Prerequisites: MDI 211**
**Course Description:**
This course introduces the student to radiologic technology science and explains the process of image formation including radiographic film structure, latent image formation, and processing of the x- ray film. In addition, it describes the factors which affect image quality.

**Course Code: MDI 224**
**Course Title: Peripheral osseous system radiography**
**Prerequisites: BMS 121**
**Course Description:**
This course includes demonstration and practice in positioning and anatomical radiography of the upper and lower extremities to include shoulder and pelvic girdles.

**Course Code: MDI 226**
**Course Title: Peripheral osseous system radiography lab**
**Prerequisites: BMS 121**
**Course Description:**
This course includes demonstration and practice in positioning and anatomical radiography of the upper and lower extremities to include shoulder and pelvic girdles.

**Course Code: MDI 228**
**Course Title: Patient Care in Radiology Department**
**Prerequisites: MDI 102**
**Course Description:**
This course provides the foundation knowledge and skills that students need to provide safe and effective patient care as a

student health practitioner. The course introduced the medico-legal and ethical responsibilities of a medical imaging practitioner. Students will be able to integrate the physical, mental, and psychosocial aspects of care to provide a holistic approach to interacting with and caring for patients. students will be able to apply infection control and manuals. handling techniques and conduct basic patient assessments. The course also introduced the common medical emergencies that may occur in the medical imaging clinical environment.

**Course Code: MDI 230**
**Course Title: Patient Care in Radiology Department Lab**
**Prerequisites: MDI 102**
**Course Description:**
This course provides the foundation knowledge and skills that students need to provide safe and effective patient care as a student health practitioner. The course introduced the medico-legal and ethical responsibilities of a medical imaging practitioner. Students will be able to integrate the physical, mental, and psychosocial aspects of care to provide a holistic approach to interacting with and caring for patients. students will be able to apply infection control and manuals. handling techniques and conducting basic patient assessments. The course also introduced the common medical emergencies that may occur in the medical imaging clinical environment.

**Course Code: HIM210**
**Course Title: Introduction to Healthcare Informatics**
**Prerequisites: CIT 100**
**Course Description:**
This course is an introduction to the health information management profession and the heath record focusing on procedures for completion, maintenance, and preservation of health information in the UAE. The relationship between health information management and the health care delivery system in the UAE and other countries will be discussed. Topics covered include the content and structure of patient records; quantitative and qualitative analyses of the documentation of patient care; storage methods; and retrieving patient data. There will also be a discussion of clinical classification types employed in Health Information Management.

**Course Code: HCM 323**
**Course Title: Quality Management in Healthcare**
**Prerequisites:**
**Course Description:**
This course is one of the core requirements for all students. This course will cover the organizational structure and function of public health systems, policies, and programs at the local, state, and federal levels. Official agencies, voluntary agencies, and health-related activities in the private sector are considered. Topics covered in this course include health services/ public health organizations/ programs, financing, workforce, costs & quality issues, and organizational management. This course will provide an overall picture as well as many specific elements of health services/ public health organizations.

**Course Code: MDI311**
**Course Title: Principles of Diagnostic Imaging 2**
**Prerequisites: MDI 216**
**Course Description:**
This course explains the process of image intensification, fluoroscopic and imaging equipment, also include deep explanation of the conventional tomographic procedure, magnification radiography, stereoradiography, mammography and soft tissue imaging, digital imaging technique, and formulating the x-ray technique chart.

**Course Code: MDI313**
**Course Title: Principles of Diagnostic Imaging 2 lab**
**Prerequisites: MDI 216**
**Course Description:**
This lab introduces the process of image intensification, fluoroscopic and imaging equipment. It also explains the conventional tomographic procedure, magnification radiography, stereoradiography, mammography and soft tissue imaging, digital imaging technique, and formulating the x-ray technique chart.

**Course Code: MDI 327**
**Course Title: Central osseous system radiography**
**Prerequisites: MDI 226**
**Course Description:**
This course provides the student with instruction in the radiographic anatomy and positioning of the skull, facial bone, sinuses, mastoids, temporal bones, vertebral columns, and thorax. Students will be required to participate in simulation activities on each other for each of the procedures covered in this course.

**Course Code: MDI 329**
**Course Title: Central Osseous System Radiography Lab**
**Prerequisites: MDI 226**
**Course Description:**
This course provides the student with instruction in the radiographic anatomy and positioning and to obtain basic knowledge, skills, and application of alignment of body parts, cassettes, and x-ray tube in each elementary radiographic examination correlated with patient care procedures. Emphasis will be placed on positioning terms, projections of the chest, abdomen, and pelvis, skull, facial bone, sinuses, chest, abdomen, pelvis and vertebral column. As well as corresponding radiographic analysis. A laboratory component is included. Student will be required to participate in simulation activities on each other for each of the procedures covered in this course.

**Course Code: MDI 333**
**Course Title: Radiographic surface anatomy**
**Prerequisites: MDI 218**
**Course Description:**
In this course, students gain knowledge that will assist in the development of their ability to correctly identify and localize human anatomy in radiographic images. The course serves as a foundation for the progression towards clinical competencies knowledge; it also provides an awareness of common anomalies. The course covers the chest, abdomen, pelvis, skull, upper and lower extremities, vertebral column radiographic anatomy and routine fluoroscopic procedures.

**Course Code: MDI 335**
**Course Title: Enter internal Course Code**
**Prerequisites: MDI 218**
**Course Description:**
In this course, students gain knowledge that will assist in the development of their ability to correctly identify and localize human anatomy in radiographic images. The course serves as a foundation for the progression towards clinical competencies knowledge; it also provides an awareness of common anomalies. The course covers the chest, abdomen, pelvis, skull, upper and lower extremities, vertebral column radiographic anatomy and routine fluoroscopic procedures.

**Course Code: MDI 334**
**Course Title: Radiographic cross-sectional anatomy**
**Prerequisites: MDI 335**
**Course Description:**
This course provides an in-depth exploration of human anatomy as visualized through cross-sectional imaging modalities such as computed tomography (CT) and magnetic resonance imaging (MRI). Students will learn to identify anatomical structures in axial, coronal, and sagittal planes, with emphasis on the thorax, abdominopelvic region, and neuroanatomy (brain, cranium, and facial bones). Topics include imaging principles, contrast usage, advanced visualization techniques (e.g., multiplanar reformatting, volume rendering), and the application of anatomical knowledge to interpret clinical images. The course integrates theoretical foundations with practical skills (the corequisite MDI 336 Course) to prepare students for roles in medical imaging and diagnostic radiology

**Course Code: MDI 336**

**Course Title: Radiographic cross sectional anatomy lab**
**Prerequisites: MDI 335**
**Course Description:**
This course study of human anatomy as seen in axial, sagittal, and coronal planes as would be shown on CT or MRI examinations. Bony, muscular, vascular, soft tissues, and organs of the following anatomical regions are studied: central nervous system, cardiovascular, thorax, abdomen, and pelvis.
**Course Code: MDI346**
**Course Title: Radiologic Pathology**
**Prerequisites: BMS 410**
**Course Description:**
This course is a comprehensive discussion of various pathological processes that affect various body systems and their radiological appearances.
**Course Code: MDI 350**
**Course Title: Breast Imaging**
**Prerequisites: MDI 313, MDI 230**
**Course Description:**
This course introduces the students to the process of breast imaging. It exposes the student to the physical principle of mammography and its clinical applications. The imaging procedure is covered in addition to the quality assurances and troubleshooting.
**Course Code: MDI 352**
**Course Title: Fluoroscopic imaging**
**Prerequisites: MDI 311**
**Course Description:**
This course introduces the student to the applications of contrast media (CM) in radiography. It provides an explicit description of the fluoroscopic procedures for the different body systems including the gastrointestinal tract (GIT), urinary system and female reproductive system, salivary glands etc…. It also introduces the student to the different types of contrast media used in fluoroscopy and their side effects.
**Course Code: MDI 354**
**Course Title: Fluoroscopic imaging lab**
**Prerequisites: MDI 311**
**Course Description:**
This course introduces the student to the applications of contrast media (CM) in radiography. It provides an explicit description of the fluoroscopic procedures for the different body systems including the gastrointestinal tract (GIT), urinary system and female reproductive system, salivary glands etc…. It also introduces the student to the different types of contrast media used in fluoroscopy and their side effects.
**Course Code: MDI 356**
**Course Title: Dental radiography**
**Prerequisites: MDI 329**
**Course Description:**
Study of the basic intraoral and extraoral radiographic projections that are used in dentistry. Study of various techniques of image production, and new advances in dental radiography. Emphasis on radiation protection (operator and patient). Focus on radiographic interpretation, client management, mounting procedures and quality assurance.
**Course Code: MDI 362**
**Course Title: Ultrasound**
**Prerequisites: MDI 313**
**Course Description:**
This course introduces the students to the process of breast imaging. It exposes the student to the physical principle of mammography and its clinical applications. The imaging procedure is covered in addition to the quality assurances and troubleshooting.
**Course Code: MDI 376**
**Course Title: Nuclear medicine**
**Prerequisites: MDI 211**
**Course Description:**
This comprehensive course in Nuclear Medicine Technology integrates theoretical knowledge and practical skills essential for the safe and effective use of radiopharmaceuticals in diagnostic and therapeutic procedures. Topics include radiation physics, decay calculations, instrumentation (e.g., scintillation cameras, PET/CT scanners), and imaging techniques such as SPECT and PET. Emphasis is placed on radiation safety (ALARA principles), regulatory compliance, radiopharmaceutical preparation, quality control, and patient care. The course also covers clinical applications across body systems (e.g., CNS, endocrine, cardiovascular, skeletal) and addresses cultural competence, HIPAA compliance, and ethical considerations in patient interactions. Students will gain proficiency in performing calculations, operating imaging systems, and adhering to protocols for radiation protection and contamination control.
**Course Code: MDI 453**
**Course Title: Vascular Imaging**
**Prerequisites: MDI 352**
**Course Description:**
This course is an introduction to catheter-based angiographic procedures, covering the technological and practical aspects of angiography and cardiac catheterization. It also introduces students to major interventional procedures and prepares them for clinical training in their fourth year.
**Course Code: MDI 413**
**Course Title: Quality control in medical imaging**
**Prerequisites: MDI 311**
**Course Description:**
This course delves into the principles of quality management, quality assurance, and quality control in medical imaging. Students will learn to differentiate between these concepts, list the benefits of quality control for patients and departments, discuss the proper tests and tools used in quality control, and evaluate the results of these tests.
**Course Code: MDI 415**
**Course Title: Quality control in medical imaging lab**
**Prerequisites: MDI 311**
**Course Description:**
This course is designed to cover all the technical and administrative processes to ensure that radiographic equipment performs according to manufacturing standards.
**Course Code: MDI 455**
**Course Title: Vascular Imaging Lab**
**Prerequisites: MDI 352**
**Course Description:**
This course is an introduction to catheter-based angiographic procedures. It covers the technological and practical aspects of angiography and cardiac catheterization and introduces students to major interventional procedures. The course is designed to prepare students for clinical training in their fourth year.
**Course Code: MDI 463**
**Course Title: Magnetic Resonance Imaging**
**Prerequisites: MDI 336**
**Course Description:**
This course provides the physics related to obtaining CT images, including information on data acquisition, processing, hardware, software, and technical parameters. It also covers the scanning procedures necessary to obtain CT images of anatomical structures and organs.
**Course Code: MDI 467**
**Course Title: Computed Tomography**
**Prerequisites: MDI 336**
**Course Description:**
This course introduces the student to the principles of MRI, covering both physical and clinical aspects. The physical part includes magnetization, NMR, image contrast formation, pulse sequences, and safety. The clinical part provides basic knowledge of imaging protocols and parameters for different parts of the body, such as the head and neck, spine, chest, abdomen, pelvis, and limbs.
**Course Code: MDI 469**

**Course Title: Computed Tomography**
**Prerequisites: MDI 336**
**Course Description:**
This course provides the physics related to obtaining CT images. It includes information on data acquisition, processing, hardware, software, and technical parameters. The course also covers the scanning procedures needed to get CT images of anatomical structures and organs
**Course Code: MDI 465**
**Course Title: Magnetic Resonance Imaging Lab non-Arabic**
**Prerequisites: MDI 336**
**Course Description:**
This course introduces the student to the principles of MRI, including physical and clinical aspects of the imaging process. The physical part covers topics like magnetization, nuclear magnetic resonance (NMR), image contrast formation, pulse sequences, flow phenomena, and image artifacts. The clinical aspect provides basic knowledge of imaging protocols and parameters for areas like the head, neck, spine, chest, abdomen, pelvis, and limbs.
**Course Code: MDI 419**
**Course Title: Graduation Project**
**Prerequisites: BSC220**
**Course Description:**
This course involves individual student research work, including a literature search and the creation of a study plan in collaboration with a supervisor. At the end, students will write a research report and design, present, and discuss a poster based on their results.
**Course Code: MDI 385**
**Course Title: Internship I**
**Prerequisites: MDI 226**
**Course Description:**
This course is designed to introduce students to the clinical environment and provide them with the opportunity to interact with staff radiographers and radiologists to begin developing clinical skills. Students begin developing critical thinking and problem-solving skills in the clinical areas as they begin to perform upper extremity, lower extremity and shoulder examinations learned in the classroom and practiced in the laboratory setting. Staff radiographers directly supervise students during this period.
**Course Code: MDI 487**
**Course Title: Internship II**
**Prerequisites: MDI 385**
**Course Description:**
The Clinical Internships course series is designed to provide students with hands-on, practical experience in medical diagnostic imaging. Over three levels, students will progressively develop their clinical skills, apply theoretical knowledge in real-world settings, and gain exposure to various imaging modalities and patient care scenarios. Each level builds on the previous one, enhancing the student's competence and confidence in performing diagnostic imaging procedures. This course consolidates to perform Specialized advanced imaging procedures & techniques, Interventional radiography (vascular & non-vascular applications), and CT Scan imaging (advanced applications in systemic imaging, advanced image processing, contrast media usage & optimization, image quality versus radiation dose, dose optimization techniques, advanced/abnormal cross sectional anatomy and image evaluation & interpretation).
**Course Code: MDI 488**
**Course Title: Internship III**
**Prerequisites: MDI 487**
**Course Description:**
The Clinical Internships course series is designed to provide students with hands-on, practical experience in medical diagnostic imaging. Over three levels, students will progressively develop their clinical skills, apply theoretical knowledge in real-world settings, and gain exposure to various imaging modalities and patient care scenarios. Each level builds on the previous one, enhancing the student's competence and confidence in performing diagnostic imaging procedures. This course consolidates to perform radiographic modalities Quality Assurance Procedures, clinical applications of the MRI, nuclear medicine & Ultrasound.

## Bachelor of Science in Medical Laboratory Analysis (BS-MLA)

**Course Code: MLS 110**
**Course Title: Clinical Laboratory Instrumentation**
**Prerequisites:**
**Course Description:**
This course aims to introduce the practical applications of clinical laboratory instruments and introduces the students to the principles of instrumental methods of analysis including visible and ultraviolet spectrophotometry, flame photometry, chromatography, electrophoresis, radiation counters and automated chemical analyzers. The student will be exposed to sophisticated analytical instruments to enhance laboratory skills and confidence of working in the medical laboratory.
**Course Code: MLS 211**
**Course Title: Medical Microbiology**
**Prerequisites:**
**Course Description:**
This course focuses on the foundation of the basic principles of medical microbiology. The course is designed to provide Medical Laboratory Sciences students with adequate knowledge about microbes, diseases, modes of transmission of infections and infection control measures applied in the context of UAE. The course involves identification of the role of saprophytes, normal commensal flora, and pathogenic microbes that cause common infectious diseases in UAE. The course elaborates the tools and methods for the study of microbes, microbial structure and function, virulence factors as well as microbial genetics and its importance in the virulence of microbes are also dealt with in the course. The basic immune defense mechanism of the host is also considered in this course. Students in practical sessions will experience preparation of bacterial culture media, sterilization and antiseptic techniques and an antibiotic sensitivity test as applied in clinical laboratories within the UAE.
**Course Code: MLS 212**
**Course Title: Basic Hematology**
**Prerequisites: BMS 122**
**Course Description:**
This course is designed to introduce the theoretical and practical aspects of normal hematology and will include the normal composition of blood, collection and storage of blood, hemopoiesis, morphology, structure, and function of red cells, white cells and platelets in addition to the normal hemostasis. The course will provide students with knowledge and skills to perform a variety of lab tests and to know the different components of the blood.
**Course Code: MLS 213**
**Course Title: Immunology**
**Prerequisites:**
**Course Description:**
This course is designed to introduce the student to the fundamentals of this specialized branch of laboratory medicine. It involves the study of the process of immunity, theory, and practice of a wide variety of procedures used in the laboratory. The composites of Innate and Adaptive immunity are discussed and how they interact in recognizing foreign molecules to defend the body against invading microorganisms. Practical aspects of antigen and antibody interactions are investigated
**Course Code: MLS 220**
**Course Title: Histology and Microtechniques**
**Prerequisites: BMS 121**

**Course Description:**
This course is designed to introduce the students to concepts of histology related to the cells and tissue , arrangements of the human body, It deal with the study of the micro anatomical structure and function of the body's major organs of the epithelial; connective; muscular and nervous tissues; structural and functional relationships between cells and tissues in organs; comparative histology of the circulatory; nervous; digestive; integumentary; respiratory; excretory; reproductive; endocrine and sensory systems , laboratory exercises will include the study of prepared slides and of micro techniques; practice on standard methods of microscopic slide preparation.

**Course Code: MLS 222**
**Course Title: Diagnostic Hematology**
**Prerequisites: MLS 212**
**Course Description:**
This course is designed to provide the student with knowledge and practical skills used for differential diagnosis of erythrocytes, leukocytes, platelets, and hemostatic inherited/acquired disorders. Erythrocyte disorders include anemias, hemoglobinopathies, and metabolic anemias. Leukocyte disorders include benign leukocyte disorders, chronic and acute leukemia, proliferative disorders, and hemostatic disorders including platelets disorders (thrombocytosis and thrombocytopenia), vascular disorders, fibrinolytic system disorders and coagulation disorders (hypercoagulable abnormalities and bleeding tendency). Laboratory morphology and additional tests used in the diagnosis of these disorders play an integral role in this course as well as the correlation of clinical and laboratory data

**Course Code: MLS 223**
**Course Title: Transfusion Science**
**Prerequisites: MLS 213**
**Course Description:**
This course introduces the students to the history of blood transfusion and discovery of blood group systems. Inheritance and clinical significance of major blood group systems and their applications in transfusion medicine is discussed together with the techniques of antibody detection and antigen typing. Emphasis is also placed on blood bank techniques including blood grouping, antigen typing, and Anti-human globulin testing. Donor selection and processing, blood component preparation, storage and expiry and indications for use are discussed. Adverse effects of blood transfusion are discussed as well as the pathophysiology and management of Haemolytic Disease of the Newborn (HDNB) and Auto Immune Hemolytic Anaemia (AIHA). Laboratory exercises include grouping and matching techniques, antibody detection and identification, and other procedures associated with blood bank practice

**Course Code: MLS 310**
**Course Title: Hematology: Coagulation & Hemostasis**
**Prerequisites: MLS 212**
**Course Description:**
This course describes the mechanisms of normal hemostasis and the roles and interactions of blood vessels, platelets, coagulation and fibrinolytic systems. The inherited and acquired disorders of hemostasis will be studied, and students will carry out the practical tasks needed to differentiate and diagnose these disorders. The causes and clinical effects of thrombosis will be discussed. Students will carry out the appropriate laboratory tests involved in the diagnosis and treatment of these disorders

**Course Code: MLS 311**
**Course Title: Clinical Parasitology**
**Prerequisites: MLS 211**
**Course Description:**
The course aims at familiarizing students with the basic concepts of Parasitology, types of animal associations, adaptations to parasitic mode of life and evolution of parasitism. Parasites' life – cycles, infection, transmission, pathology, symptoms, diagnosis, treatment, and control of medically and economically important parasites are the main emphasis of this course. Laboratory sessions are designed to expose the students to the morphology of the different developmental stages of medical and economically important parasites as well as introducing the skills of proper laboratory procedures for collecting, handling, diagnosing, and identifying parasitic organisms.

**Course Code: MLS 312**
**Course Title: Diagnostic Microbiology I**
**Prerequisites: MLS 211**
**Course Description:**
This course focuses on systemic pathogenic bacteria. This course provides students with theoretical and practical aspects of various groups of bacteria their classification, morphology, cultural characters, biochemical reactions, resistance, antigenic structure, virulence factors, pathogenicity, clinical features, laboratory diagnosis, treatment and epidemiology. The principles of culture, identification and susceptibility testing are covered in depth using live cultures of various Gram positive and Gram-negative bacteria to encompass all areas of systematic bacteriology. Special focus is also given to antimicrobial chemotherapy which includes their classification based on bacterial anatomical targets, mechanism of action, resistance and antibiotic susceptibility testing.

**Course Code: MLS 210**
**Course Title: Clinical Chemistry I**
**Prerequisites: BMS 123**
**Course Description:**
This course is designed to introduce the student to diagnosis and monitoring of disease using plasma, serum, urine, and other body fluids. Student will gain knowledge and skills in various analytical techniques and methods used in the measurement of various parameters in the blood and other body fluids, and to gain technical skills and knowledge of interpretation of test results in health and disease states. The course mostly covers routine laboratory investigations related to disorders of plasma proteins and amino acids, carbohydrate disorders, lipids and lipoprotein abnormalities, enzymes, blood gases and electrolytes.

**Course Code: MLS 320**
**Course Title: Urinalysis & Body Fluids**
**Prerequisites: BMS 123**
**Course Description:**
This course is intended to provide the student with a foundation for performing urine and body fluid analysis. The anatomy and physiology of the renal system, urine formation, chemical analysis of urine and the microscopic examination of urinary sediment will be introduced. Urinary and metabolic diseases as they relate to urinalysis findings will be discussed. An introduction to body fluids and their clinical significance will be examined.

**Course Code: MLS 321**
**Course Title: Principle of Human Genetics**
**Prerequisites: BMS 123, BMS 122**
**Course Description:**
This course is designed to introduce the student to the study of biological inheritance in humans, the history and principles of heredity at the molecular and cellular level, and the transmission and expression of genetic information. The course enables an improved understanding of genetics topics and their influence on modern life such as the structure of DNA and RNA, gene expression, gene organization, gene regulation and gene transfer. Current issues such as recombinant DNA technology, human heritable diseases and population genetics are included. The course provides a foundation for studies in human biology and related fields regarding the principles of inheritance, structure and function of genetic material, prokaryotic and eukaryotic genes and finally the impact of genetics on population dynamics and evolution.

**Course Code: MLS 322**
**Course Title: Diagnostic Microbiology II**

**Prerequisites: MLS 312**
**Course Description:**
This course is the study of microorganisms of medical importance in relationship to disease and diagnosis. This course also emphasizes identification of bacteria in patient specimens, specimen collection and antimicrobial susceptibility testing. The course will provide the conceptual basis for understanding pathogenic microorganisms and particularly address the fundamental mechanisms of their pathogenicity. The laboratory sessions cover techniques of identification of normal flora, pathogenic bacteria, including morphology, classification and cultivation of bacteria.
**Course Code: MLS 323**
**Course Title: Clinical Immunology and Serology.**
**Prerequisites: MLS 213**
**Course Description:**
This course provides a foundation in the theoretical basis of clinical immunology and will give the student an understanding of the mechanisms of diagnostic tests, interpretation of results of immunological tests, and the clinical settings in which various tests are appropriate. The laboratory portion of this course will provide an opportunity for the student to perform directed exercises in clinical immunology. These exercises will teach basic techniques in clinical immunology, provide a practical link to the theoretical information present in lecture and show the divers applications of immunological techniques.
**Course Code: MLS 410**
**Course Title: Molecular Biology**
**Prerequisites: MLS 321**
**Course Description:**
This course provides knowledge and understanding of traditional and molecular genetics and molecular biology. It examines advanced aspects of genetics and inheritance at a phenotypic, population and molecular level. It also provides basic skills on molecular biology techniques The course introduces the student to be familiar with the basic molecular biology regarding the DNA structure and function, RNA structure and function through the molecular biology central dogma (replication, transcription, and translation) and application of the molecular biology techniques in laboratory diagnosis. By the end of the course the student should be familiar with and gain an understanding of the objectives, applicability and limitations underlying each of these methods. Includes the analysis of nucleic acids: Polymerase chain reaction (PCR), gel electrophoresis and blotting techniques (Northern, Southern), real-time PCR, microarrays (DNA chips), DNA sequencing and methods to study gene function. Manipulation and analysis of gene expression in prokaryotic systems, through eukaryotic tools.
**Course Code: MLS 221**
**Course Title: Clinical chemistry II.**
**Prerequisites: MLS 210**
**Course Description:**
This course is designed to introduce the student to the various analytical techniques and methods used in the measurement of various parameters in the blood and other body fluids, and to gain technical skills and knowledge of interpretation of test results in health and disease states. The course mostly covers routine laboratory investigations related to disorders such as cardiac function, kidney function, liver function, hormonal abnormalities, pancreatic function, and gastrointestinal disorders.
**Course Code: MLS 411**
**Course Title :Medical Virology.**
**Prerequisites: MLS 211**
**Course Description:**
The course introduces the basic principles of virology including definitions, structure, nomenclature, classifications, modes of viral infection, viral diseases and viral vaccines. Also, the course designed to introduce student to the major classes of viruses and their replication mechanisms, to examine virus-host interactions, and to discuss the public health aspects of virus infections, as well as major systemic diseases cause by various viruses. The practical part of the course will provide students with fundamental virology laboratory techniques
**Course Code: MLS 412**
**Course Title: Laboratory Management and Quality Assurance**
**Prerequisites:**
**Course Description:**
This is an integrated course of both laboratory management and quality assurance in the medical laboratory. The course describes the fundamental principles and practices of management and supervision of clinical laboratory including management of organizations, human resources, financial resources, and laboratory operations. Concerning quality assurance, the course covers subjects related to quality concepts and terminology, tools of quality monitoring and assessment, data interpretation, and appropriate actions in response to QC results.
**Course Code: MLS 419**
**Course Title: Graduation Project**
**Prerequisites: BSC 221, BSC 321**
**Course Description:**
This course provides students with the opportunity to apply research skills and carry out a research project related to the major program under the supervision of a faculty member. Students will be required to conduct literature review and perform data collection, statistical analysis, writing up of the research paper. Students participating in research must complete CITI program (https://about.citiprogram.org/en/homepage/) for research ethics and compliance training prior to submitting research proposals.
**Course Code: MLS 420**
**Course Title: Clinical Practice**
**Prerequisites: MLS 220, MLS 221, MLS 222, MLS 223, MLS 310, MLS 311, MLS 320, MLS 323, MLS 410, MLS 411, MLS 412**
**Course Description:**
Clinical Practice is an integral part of the program in Medical Laboratory Analysis and is designed to provide graduating students with an opportunity to integrate and apply previously acquired knowledge and technical skills in clinical settings. Under the guidance of experienced Medical Laboratory Professionals and other qualified laboratory preceptors, students learn more about diagnostic test procedures, quality control methods and programs, and instrumentation in the pre-analytical, analytical, and post-analytical clinical laboratory. Students also gain an understanding of the roles and functions of the Medical Laboratory Professionals. The Clinical Practice program is conducted in an affiliated hospital laboratory, where students learn by participating in the workload of a supervising preceptor. The course gives students practical experience in effective communications to ensure accurate and appropriate information transfer. Finally, it helps students find employment by gaining experience they require to enter the world of medical laboratory.

## Bachelor of Science in Occupational Therapy

**Course Code: OT 200**
**Course Title: Foundations of Occupational Therapy**
**Prerequisites: BMS 122**
**Course Description:**
This foundational course covers the principles, history, and ethics of occupational therapy (OT), introducing students to the profession's role in the healthcare field. The practical component involves case-based discussions where students analyze real-world applications of OT in clinical settings, highlighting innovation in therapeutic approaches to enhance patient care

and adaptability in modern healthcare systems.

**Course Code: OT 201**
**Course Title: Patient Assessment (Functional Assessment of OT)**
**Prerequisites: BMS 122**
**Course Description:**
This course focuses on developing the skills necessary for conducting functional assessments in occupational therapy. The course covers a wide range of assessment tools and techniques used to evaluate a patient's functional abilities, including activities of daily living (ADLs), mobility, cognitive functioning, and overall independence. The theoretical component will explore the principles of assessment, test selection, and interpretation, with an emphasis on evidence-based practices and innovative approaches that promote sustainable patient care. The practical component will provide students with hands-on experience in conducting assessments with real patients, fostering adaptability, creativity, and sustainable use of resources in therapeutic practice. This course aims to prepare students to gather and analyze data, identify areas of need, and develop effective intervention plans to improve patient outcomes in a responsible and forward-looking manner.

**Course Code: OT 202**
**Course Title: OT Process and Techniques**
**Prerequisites: OT 200**
**Course Description:**
Students will explore the occupational therapy process, covering assessment, intervention, and evaluation of outcomes. The course includes practical lab sessions where students will practice therapeutic techniques and use various tools. It addresses the entire OT process, from referral to discharge, emphasizing the design of patient-centered and sustainable intervention plans, and the application of innovative techniques in simulated clinical settings. Students will assess the effectiveness of interventions based on client progress and work collaboratively to enhance their skills, adaptability, and decision-making. Ethical considerations, professional standards, and innovative approaches to ensure sustainable healthcare outcomes are also integral parts of the curriculum.

**Course Code: OT 203**
**Course Title: Neuroscience**
**Prerequisites: BMS 122**
**Course Description:**
This course introduces students to the structure and function of the nervous system, with an emphasis on how neurological dysfunctions influence occupational performance. The practical component integrates case studies and hands-on applications of neuroscience principles in occupational therapy practice, highlighting innovative therapeutic strategies that promote patient adaptation, recovery, and long-term well-being in diverse clinical contexts.

**Course Code: OT 300**
**Course Title: Human Growth and Development**
**Prerequisites: BMS 122**
**Course Description:**
This course examines human development from infancy through old age, emphasizing the ways in which biological, psychological, and social changes affect occupational performance. Students will explore typical and atypical developmental patterns and analyze the role of occupational therapy in supporting clients at each stage of life. The course also highlights innovative and sustainable approaches to promote lifelong adaptation, well-being, and inclusion in diverse environments.

**Course Code: OT 301**
**Course Title: OT Theories and Techniques**
**Prerequisites: OT 202**
**Course Description:**
This course covers the theoretical models that guide occupational therapy (OT) practice, including the Kawa Model and the Person-Environment-Occupation (PEO) Model. Students will apply these models to case studies during practical sessions to strengthen their clinical reasoning skills. The course also emphasizes innovative approaches and sustainable applications of OT models, enabling learners to deliver culturally sensitive, holistic, and client-centered interventions that adapt to evolving healthcare needs.

**Course Code: OT 302**
**Course Title: Functional Assessment of OT**
**Prerequisites: OT 201**
Students will deepen their knowledge of functional assessment tools and techniques, gaining the ability to evaluate client performance across diverse contexts. The practical component emphasizes hands-on application of these assessments, such as evaluating mobility and dexterity in various client populations. The course also integrates innovative assessment strategies and sustainable practices to ensure accurate, ethical, and long-term applicability of functional evaluations in occupational therapy.

**Course Code: OT 303**
**Course Title: Biomechanics**
**Prerequisites**: **OT 202**
**Course Description:**
This course covers the principles of biomechanics as they relate to occupational therapy. Students will learn to assess clients' movement patterns and identify dysfunctions that affect daily functioning. Practical sessions will involve designing and implementing interventions to improve function, prevent injury, and enhance performance in activities of daily living. The course also emphasizes the integration of innovative biomechanical strategies and sustainable rehabilitation practices to support long-term health, independence, and occupational engagement.

**Course Code: OT 304**
**Course Title: Hand Splinting**
**Prerequisites: OT 202**
**Course Description:**
This course teaches students the theory and application of hand splinting for a variety of upper extremity conditions. In practical sessions, students will design, fabricate, and fit splints, developing their clinical reasoning and problem-solving skills to meet client needs. The course also emphasizes the use of innovative splinting techniques and sustainable material choices to ensure effective, client-centered interventions that balance functionality, comfort, and long-term usability.

**Course Code: OT 305**
**Course Title: Applied OT for Neurological Conditions**
**Prerequisites: OT 300**
**Course Description:**
Students will examine how common neurological conditions impact occupational performance and develop patient-centered interventions for individuals with neurological impairments. The course features practical lab sessions to apply neurorehabilitation techniques aimed at promoting functional recovery. Students will assess the effectiveness of these interventions and collaborate with peers to tailor techniques to meet diverse client needs.

**Course Code: OT 307**
**Course Title: Upper Extremity Rehabilitation**
**Prerequisites: OT 300**
**Course Description:**
This course covers the assessment and treatment techniques for upper extremity injuries and conditions affecting the shoulder, elbow, wrist, and hand. Students will apply advanced rehabilitation techniques in practical settings to restore functional abilities and enhance occupational performance in clients with upper extremity disorders. The course emphasizes innovative therapeutic strategies and sustainable rehabilitation practices to promote recovery, long-term independence, and improved quality of life.

**Course Code: OT 400**
**Course Title :Community-Based Rehabilitation**
**Prerequisites: OT 300**

**Course Description:**
This course examines the role of occupational therapy in community-based rehabilitation (CBR) programs, with a focus on delivering healthcare services to underserved and marginalized communities. Students will learn to design, implement, and evaluate CBR projects that promote community participation, health equity, and sustainable well-being. The practical component provides hands-on experience in creating and managing CBR initiatives that address the unique needs of vulnerable populations, incorporating innovative strategies to strengthen inclusion, resilience, and long-term impact.

**Course Code: OT 401**
**Course Title: OT Process and Techniques**
**Prerequisites: OT302**
**Course Description:**
This course introduces students to the principles and applications of assistive technology in occupational therapy, with a focus on mobility aids, communication devices, and environmental modifications. It covers evaluation, activity analysis, and intervention processes with a range of assistive technologies, including software, hardware, and low-tech solutions. The course emphasizes innovative and sustainable approaches to adapting activities and contexts, equipping students with the skills to select and apply assistive technologies that promote independence, accessibility, and long-term usability. The practical component provides hands-on experience in tailoring assistive technologies to meet diverse client needs.

**Course Code: OT 402**
**Course Title: Pediatrics and Psychiatric Cases (Special Patient Populations)**
**Prerequisites: OT 300**
**Course Description:**
This course focuses on occupational therapy interventions for pediatric and psychiatric populations, addressing their unique developmental and psychosocial needs. It examines the etiology, diagnosis, prognosis, clinical presentation, functional limitations, and common treatments and medications associated with these conditions. Students will explore a variety of frames of reference, evaluative strategies, and intervention approaches for children and their families in medical, home, community, and educational settings. The course emphasizes innovative therapeutic practices and sustainable approaches to promote inclusion, resilience, and long-term well-being. The practical component includes simulated interventions and assessments for children and individuals with mental health disorders.

**Course Code: OT 403**
**Course Title: Lower Extremity Rehabilitation**
**Prerequisites: OT 300**
**Course Description:**
Students will explore the occupational therapy process, covering assessment, intervention, and evaluation of outcomes. The course includes practical lab sessions where students will practice therapeutic techniques and use various tools. It addresses the entire OT process, from referral to discharge, emphasizing the design of patient-centered and sustainable intervention plans, and the application of innovative techniques in simulated clinical settings. Students will assess the effectiveness of interventions based on client progress and work collaboratively to enhance their skills, adaptability, and decision-making. Ethical considerations, professional standards, and innovative approaches to ensure sustainable healthcare outcomes are also integral parts of the curriculum.

**Course Code: OT 405**
**Course Title: OT for Geriatrics**
**Prerequisites: OT 300**
**Course Description:**
This course addresses the specialized needs of geriatric clients, emphasizing interventions that promote safety, independence, and sustainable well-being in older adults. Through hands-on practical sessions, students will gain experience in assessing and developing tailored treatment plans for geriatric patients experiencing physical, cognitive, and psychosocial challenges. The course also integrates evidence-based practices, innovative approaches, and ethical principles to enhance quality of life, preserve dignity, and foster resilience in aging. Students will be prepared to meet the complex demands of geriatric care with sensitivity, professionalism, and client-centered strategies.

**Course Code: OT 406**
**Course Title: Occupational-Related Disability**
**Prerequisites: OT 300**
**Course Description:**
This course explores how occupational therapy addresses work-related injuries and occupational disabilities. It provides an overview of medical conditions commonly seen by occupational therapists, including their diagnostic features, associated conditions, prevalence, and course of disease. Students will learn to design occupational therapy interventions for specific impairments, emphasizing evidence-based, innovative, and sustainable practices. The practical component focuses on ergonomic assessments and the development of comprehensive return-to-work plans that promote long-term recovery, workplace safety, and sustainable occupational performance.

**Course Code: OT 407**
**Course Title: OT and Healthcare System**
**Prerequisites: OT 300**
**Course Description:**
This course provides an in-depth understanding of how occupational therapy fits within the broader healthcare system, including its role in interdisciplinary teams, reimbursement models, and healthcare policies. Students will learn to navigate healthcare systems and advocate for OT services. It emphasizes how occupational therapists can influence health policy, advocate for change and address emerging professional ethical issues. The practical component includes real-world case studies where students interact with healthcare systems and address policy issues.

**Course Code: OT 410**
**Course Title: Graduation Project**
**Prerequisites: (90 CH)**
**Course Description:**
In this capstone course, students design and complete a research or practice-based project that addresses a real-world issue in occupational therapy. Under faculty guidance, students apply research methodologies and present their findings to peers and professionals. The course covers the overall research design and implementation process while developing skills needed for publication, dissemination, and presentation. Emphasis is placed on evidence-based, innovative, and sustainable practices that strengthen the relevance and impact of occupational therapy research. The course also involves hands-on data collection and analysis, ensuring projects are grounded in rigorous, practice-oriented evidence.

**Course Code: OT 411**
**Course Title: Clinical Practice (CP)-I**
**Prerequisites: (60 CH)**
**Course Description:**
This course provides students with practical experience in real-world clinical settings, enabling them to apply theoretical knowledge to direct patient care under the supervision of trained specialists. Students will actively participate in evaluating, diagnosing, and managing neurological, pediatric, psychiatric, geriatric, and musculoskeletal disorders. They will develop proficiency in applying advanced occupational therapy methods, therapeutic exercises, and manual treatment techniques to improve patient outcomes.
The course emphasizes effective patient communication, infection prevention and control, and the integration of evidence-based, innovative practices into clinical decision-making. Students will collaborate with multidisciplinary healthcare teams to ensure ethical practice and professional

communication. Additionally, they will gain expertise in patient education, including self-management techniques, injury prevention, and sustainable home exercise regimens that promote long-term recovery and independence.

**Course Code: OT 412**
**Course Title: Clinical Practice (CP)-II**
**Prerequisites: OT 411**
**Course Description:**

This course provides students with hands-on experience in real-world clinical settings, enabling them to apply theoretical knowledge gained throughout the program to direct patient care. Students will take an active role in the assessment, diagnosis, and treatment of musculoskeletal, neurological, pediatric, psychiatric, and geriatric conditions. They will gain proficiency in applying manual treatment techniques, therapeutic exercises, and advanced occupational therapy procedures to enhance patient outcomes.

Emphasis is placed on professional communication, ethical decision-making, and collaboration with interdisciplinary healthcare teams. Students will also develop expertise in patient education, focusing on injury prevention, self-management strategies, and sustainable home exercise regimens that support long-term healing, recovery, and independence.

**Course Code: OT 413**
**Course Title: Clinical Practice (CP)-III**
**Prerequisites: OT 412**
**Course Description:**

This course is designed to enhance the clinical skills and knowledge of occupational therapy students, preparing them for advanced practice in diverse healthcare settings. Through a blend of theoretical instruction, hands-on practice, and reflective learning, students will deepen their understanding of complex clinical scenarios and develop the competencies required for high-level professional practice.

Students will actively participate in the evaluation, diagnosis, and management of neurological, pediatric, psychiatric, geriatric, and musculoskeletal disorders. They will build proficiency in applying advanced occupational therapy methods, therapeutic exercises, and manual treatment techniques to improve patient outcomes.

The course emphasizes advanced skills, evidence-based therapies, and specialized knowledge essential for complex patient care. Students will gain experience with innovative evaluation methods, customized treatment plans, and creative therapeutic approaches tailored to diverse demographics. A focus is placed on addressing physical, cognitive, and psychosocial challenges by integrating theoretical frameworks, advanced clinical reasoning, and sustainable modern techniques that promote long-term recovery and independence.

**Course Code: OT 414**
**Course Title: Clinical Practice (CP)-IV**
**Prerequisites: OT 413**
**Course Description:**

This course is designed to advance the clinical skills and knowledge of occupational therapy students, preparing them for high-level practice in diverse healthcare settings. Through a combination of theoretical instruction, hands-on practice, and reflective learning, students will deepen their understanding of complex clinical scenarios and develop the competencies required for specialized and sustainable professional practice.

Students will actively participate in the evaluation, diagnosis, and management of neurological, pediatric, psychiatric, geriatric, and musculoskeletal disorders. They will gain proficiency in applying advanced occupational therapy methods, therapeutic exercises, and manual treatment techniques to optimize patient outcomes.

With an emphasis on advanced skills, evidence-based therapies, and specialized knowledge for complex patient care, the course equips students with innovative evaluation methods, customized treatment plans, and creative therapeutic approaches for diverse populations. The focus is on addressing physical, cognitive, and psychosocial challenges by integrating theoretical frameworks, advanced clinical reasoning, and sustainable modern techniques that promote long-term recovery and independence.

## Bachelor Of Science In Physiotherapy

**Course Code: PT 301**
**Course Title: Introduction to Physiotherapy**
**Prerequisites: BMS 122**
**Course Description:**

This course introduces the field of physiotherapy, including its history, core principles, and various specialties. It covers different assessment methods used to assess client's health beside the critical interventions used. The course also provides an overview of professional roles and responsibilities in the healthcare system.

**Course Code: MDI102**
**Course Title: Introduction to medical diagnostic**
**Prerequisites: None**
**Course Description:**

This course provides a foundational overview of key concepts and principles essential to the field of radiography and medical imaging. Students will explore the historical development of the field, from the discovery of x-rays and radioactivity to the advent of modern imaging modalities. Emphasis will be placed on understanding fundamental patient care principles, effective communication with diverse patient populations, and the legal and safety considerations within a healthcare setting. The course will also introduce the basic principles of image production across various modalities, including radiography, fluoroscopy, computed tomography, nuclear medicine, sonography, magnetic resonance imaging, and positron emission tomography, along with the critical aspects of radiation safety and protection. from the above description please extract 6 course learning outcomes

**Course Code: OT 203**
**Course Title: Neuroscience**
**Prerequisites: BMS 122**
**Course Description:**

This course introduces students to the structure and function of the nervous system, with an emphasis on how neurological dysfunctions influence occupational performance. The practical component integrates case studies and hands-on applications of neuroscience principles in occupational therapy practice, highlighting innovative therapeutic strategies that promote patient adaptation, recovery, and long-term well-being in diverse clinical contexts.

**Course Code: PT 304**
**Course Title: Therapeutic Exercise**
**Prerequisites: PT 301**
**Course Description:**

This course provides an overview of therapeutic exercises concepts and applications. The theoretical component covers the principles and implementation of exercise interventions tailored to enhance strength, flexibility, endurance, and mobility. The practical component focuses on practicing the skills required for exercise therapy and applying these exercises in a clinical setting, allowing students to create individualized plans that address specific needs for the client.

**Course Code: PT 305**
**Course Title: Biomechanics and Kinesiology – 1**
**Prerequisites: PT 301**
**Course Description:**

This course introduces the fundamental concepts of biomechanics and kinesiology, focusing on human movement. The theoretical part includes exploring mechanical principles, joint function, and muscle action, while the practical component emphasizes analyzing both normal and pathological movement patterns through hands-on activities. These foundational skills are crucial for developing effective physiotherapy interventions.

**Course Code: PT 306**
**Course Title: Physiotherapy for Respiratory Conditions**

**Prerequisites: PT 301**
**Course Description:**
This course provides students with essential knowledge and skills to assess and manage common respiratory pathologies through physiotherapy interventions. Focusing on conditions affecting respiratory health, students will explore physical manifestations, clinical reasoning, and therapeutic strategies specific to respiratory physiotherapy. Emphasis is placed on developing clinical competency in assessing and treating clients with respiratory disorders, utilizing evidence-based approaches to predict and evaluate treatment outcomes effectively. Topics include physiotherapy management of common respiratory disorders, intensive care unit (ICU) respiratory care, and post-operative respiratory rehabilitation. Additionally, students will learn to design programs for promoting respiratory health and preventing disease recurrence. Through practical training and theoretical instruction, students will gain the skills necessary to address respiratory health challenges in different clinical settings.

**Course Code: PT 307**
**Course Title: :Physiotherapy for Cardiovascular Conditions**
**Prerequisites: PT 301**
**Course Description:**
This course focuses on the physiotherapy treatment of cardiovascular conditions, including coronary artery disease, heart failure, and post-cardiac surgery rehabilitation. The theoretical component covers cardiovascular anatomy, physiology, and exercise prescription, while the practical component involves monitoring patient progress and implementing rehabilitation programs to improve cardiovascular health.

**Course Code: PT 308**
**Course Title: Physiotherapy for Musculoskeletal Conditions**
**Prerequisites :PT 304**
**Course Description:**
This course provides essential knowledge, skills, and competencies for managing musculoskeletal conditions using specialized physiotherapy techniques. Students will explore the physiotherapist's role in assessing and treating musculoskeletal disorders across all age groups and various stages of care. Emphasis is placed on developing practical skills for identifying, evaluating, and addressing musculoskeletal dysfunctions through evidence-based physiotherapy interventions. Through hands-on practice, students will refine their clinical reasoning in assessing and selecting effective treatment methods. Topics include regional examination processes, differential diagnosis, prognosis, and intervention strategies. By the end of this course, students will be prepared to deliver comprehensive musculoskeletal care across diverse clinical setting.

**Course Code: PT 309**
**Course Title: Physiotherapy for Neurological Conditions**
**Prerequisites :OT 203**
**Course Description:**
This course provides students with essential knowledge and skills for managing neurological conditions through specialized physiotherapy interventions. Students will gain an understanding of common neurological pathologies, their physical manifestations, and the clinical reasoning processes involved in assessing, diagnosing, and treating neurological disorders. Emphasis is placed on developing practical and communication skills necessary for the safe and effective treatment of clients with neurological impairments. Topics include evidence-based treatment approaches, such as Proprioceptive Neuromuscular Facilitation (PNF), Motor Relearning Program (MRP), and other techniques designed to enhance coordination and balance. The course also covers strategies for promoting neurological health and preventing disease recurrence, equipping students with a comprehensive approach to neurological physiotherapy across diverse clinical settings.

**Course Code: PT 310**
**Course Title: Physiotherapy for Pediatrics**
**Prerequisites: PT 301**
**Course Description:**
Physiotherapy for Pediatrics is a specialized course aimed at providing students with essential knowledge, skills, and clinical reasoning to effectively assess and manage pediatric patients with diverse physical and developmental conditions. The theoretical component covers pediatric conditions such as cerebral palsy and developmental delays, while the practical part involves age-appropriate assessment and intervention techniques, including play-based therapy to enhance motor skills and functional abilities in children.

**Course Code: PT 311**
**Course Title: Physiotherapy for Geriatrics**
**Prerequisites :PT 301**
**Course Description:**
This course focuses on physiotherapy for older adults, addressing common geriatric conditions like arthritis, osteoporosis, and balance disorders. The theoretical component covers assessment and management strategies, while the practical component emphasizes promoting mobility, independence, and fall prevention through hands-on interventions.

**Course Code: PT 312**
**Course Title: Physiotherapy for Obstetrics and Gynecology**
**Prerequisites :PT 306**
**Course Description:**
This course covers physiotherapy in the context of obstetric and gynecological health. The theoretical component includes conditions like pelvic floor dysfunction and prenatal care, while the practical part focuses on hands-on techniques for pain management, improving physical health during pregnancy, and patient education.

**Course Code: PT 401**
**Course Title: Orthotics and Prosthetics**
**Prerequisites: PT 306**
**Course Description:**
This course introduces students to the principles of orthotics and prosthetics in rehabilitation. The theoretical component covers design and fitting, while the practical component involves assessing patients and integrating orthoses and prostheses into treatment plans to enhance mobility and independence.

**Course Code: PT 402**
**Course Title: Biomechanics and Kinesiology – 2**
**Prerequisites : PT 401**
**Course Description:**
Building on the concepts from Biomechanics and Kinesiology - 1, this course delves into advanced aspects of human movement. The theoretical component covers pathological movement patterns and joint mechanics, while the practical component involves applying these principles in clinical assessments and rehabilitation strategies.

**Course Code: PT 404**
**Course Title: Physiotherapy for Surgical Conditions**
**Prerequisites: PT 401**
**Course Description:**
This course focuses on physiotherapy interventions for patients undergoing surgery. The theoretical component covers pre- and post-operative care, while the practical component emphasizes hands-on rehabilitation techniques for restoring mobility and function following surgeries like joint replacements and spinal procedures.

**Course Code: PT 409**
**Course Title: Sports Physiotherapy**
**Prerequisites : PT 401**
**Course Description:**
This course covers the principles of sports physiotherapy,

including injury prevention, assessment, and rehabilitation. The theoretical component focuses on exercise physiology and biomechanics, while the practical component involves hands-on techniques to help athletes recover safely and enhance performance.

**Course Code: PT 411**
**Course Title: Advanced Technology in Physiotherapy (AI and Metaverse)**
**Prerequisites : PT 401**
**Course Description:**
This course introduces students to emerging technologies in physiotherapy, such as AI and virtual reality. The theoretical component covers the application of these technologies, their limitations, ethical and legal concerns. The practical component involves applying these tools in simulated clinical settings to gain experience thus enhance patient care and rehabilitation outcomes.

**Course Code: PT 413**
**Course Title: Graduation Project**
**Prerequisites :90 CH**
**Course Description:**
In this capstone course, students design and complete a research or practice-based project addressing a real-world issue in physical therapy. Guided by faculty, students apply research methodologies, conduct evidence-based data collection, and present their findings to peers and professionals. The course emphasizes hands-on analysis, ensuring applicability in physical therapy practice.

**Course Code: PT 414**
**Course Title: Clinical Practice (CP)-I**
**Prerequisites : 60 CH**
**Course Description:**
This course introduces students to the foundational aspects of practical experience in a clinical setting, focusing on basic skills and supervised applications. Students will begin by learning infection prevention and control, effective patient communication, and basic physiotherapy techniques. Fundamental learning outcomes include patient evaluation, history-taking, and treatment planning based on evidence-based practices. Students will also participate in weekly clinical rotations to integrate classroom learning into real-world scenarios.

**Course Code: PT 415**
**Course Title: Clinical Practice (CP)-II**
**Prerequisites : PT 414**
**Course Description:**
This course equips students with advanced clinical skills, focusing on manual therapy techniques, advanced physiotherapy modalities, and collaboration with orthopedic specialists. Students will enhance their ability to design individualized rehabilitation programs, monitor patient progress, and incorporate cutting-edge technologies like electrotherapy and therapeutic ultrasound into treatment plans. The course also emphasizes advanced patient education strategies, including injury prevention and self-management, alongside ethical decision-making in multidisciplinary teams to ensure comprehensive, professional patient care.

**Course Code: PT 416**
**Course Title: Clinical Practice (CP)-III**
**Prerequisites : PT 415**
**Course Description:**
This course offers advanced, practical instruction in a supervised clinical environment, enabling students to implement theoretical knowledge in actual patient care. The focus is on assessing, diagnosing, and managing musculoskeletal, sports, and muscle injuries, along with disorders in obstetrics, gynecology, pediatrics, and geriatrics. Students will utilize advanced physiotherapy techniques, including manual treatment and therapeutic exercises, to enhance patient outcomes and learn evidence-based procedures. The training emphasizes patient education, self-management, injury avoidance, and home rehabilitation approaches for enduring recovery.

**Course Code: PT 417**
**Course Title: Clinical Practice (CP)-IV**
**Prerequisites : PT 416**
**Course Description:**
This course offers advanced, practical instruction in a supervised clinical environment, allowing students to implement theoretical knowledge in actual patient care. The course focuses on assessing, diagnosing, and managing musculoskeletal, sports, and muscle injuries, along with disorders in obstetrics, gynecology, pediatrics, and geriatrics. Students will utilize advanced physiotherapy techniques, including manual treatment and therapeutic exercises, to enhance patient outcomes and learn evidence-based procedures.

Essential elements encompass enhancing communication abilities to cultivate empathy and professionalism, engaging with interdisciplinary teams for ethical decision-making, and executing patient-centered care methodologies. The training emphasizes patient education, self-management, injury avoidance, and home rehabilitation approaches for enduring recovery.

Students will refine their ability to adapt and optimize treatment strategies through comprehensive patient assessments, effective treatment planning, and leveraging advanced physiotherapy technologies. Under the guidance of orthopedic specialists, participants will refine their abilities in tracking progress and modifying interventions.

Evaluations, including weekly clinical case presentations, Objective-Structured Clinical Examinations (OSCE), and Objective-Structured Practical Examinations (OSPE), will assess the student's practical and clinical competencies. Upon completing the course, students will possess the skills to provide safe, effective, patient-centered care in various physiotherapy environments, prepared for professional practice.

## Diploma in Health Management and Informatics

**Course Code: ACC106**
**Course Title: Accounting Principles 1**
**Prerequisites: Nil**
**Course Description:**
This course is an introduction to financial accounting methods such as recording and book- keeping in the journal, ledger, and trial balance in accordance with the International Financial Reporting Standards (IFRS). This course is designed to help students apply the appropriate accounting treatment for both adjusting and closing operations. It also helps students in recording business transactions of merchandising companies, calculating cost of inventories, and illustrating internal control and bank reconciliation statement.

**Course Code: HCM 120**
**Course Title: Principles of Health Management**
**Prerequisites: Nil**
**Course Description:**
This course is designed to introduce students to key concepts related to the principle of health management, including concepts, issues, organizations, policies, strategies of health management approaches. The provided knowledge will deal with discipline matters of management principles applied to health services offering students an exploration of an overview of health management, strategic management, decision-making, assessment of information need, human resource management, leadership, team building, health management conflict, time management, operational health planning, program monitoring and evaluation.

**Course Code: ACC200**
**Course Title: Accounting Principles 2**
**Prerequisites: ACC106**
**Course Description:**

This course introduces advanced accounting concepts to students, including different forms of ownership, cash flows statemen, financial analysis, accounting for manufacturing operations. The purpose of this course is to provide the students with the basis of accounting skills required in Business Administration to be used in the business environment for decision making.

**Course Code: HRM 201**

**Course Title: Introduction to Human Resource Management**

**Prerequisites: None**

**Course Description:**

This course introduces various areas of human resource management including its strategic role, job analysis, training and development, HR planning and recruitment, employee selection, training and developing employees, performance management, strategic pay plans, employee relations, and employee safety & health in the workplace.

**Course Code: HIM210**

**Course Title: Introduction to Healthcare Informatics**

**Prerequisites: CIT 100**

**Course Description:**

This course is an introduction to the health information management profession and the heath record focusing on procedures for completion, maintenance, and preservation of health information in the UAE. The relationship between health information management and the health care delivery system in the UAE and other countries will be discussed. Topics covered include the content and structure of patient records; quantitative and qualitative analyses of the documentation of patient care; storage methods; and retrieving patient data. There will also be a discussion of clinical classification types employed in Health Information Management.

**Course Code: HCM 211**

**Course Title: Healthcare Services Management**

**Prerequisites: HCM 120**

**Course Description:**

The market for health services is global and growing. Demographic changes and advances in health service knowledge are driving a need for health service managers who can organize large and complex operations and coordinate diverse professions exist in healthcare entities.

Demand for health services continues to be strong internationally across public, private, and not-for-profit sectors. This course is designed to support students who wish to move into managerial positions within the health services industry; complementing previous professional/academic qualifications or building upon workplace experience. It combines insights to both public and private healthcare services with contemporary management theory.

This course is designed to develop students' skills in both strategic and operational issues pertaining to healthcare services. Students will study the importance of blending technology, people, marketing, and information to achieve a distinctive competitive outcomes and high standards of healthcare quality. Concepts taught include service management, service quality, customer satisfaction, and developing service/qualify solutions for healthcare providers.

**Course Code: HCM 212**

**Course Title: Healthcare Delivery System**

**Prerequisites: HCM 120**

**Course Description:**

This course is designed to optimize students' views regards the health care system and how it is delivered. It demonstrates an overview of the health care delivery system and how performance assessing and how process improvements could be managed. It provides an overview of the health care systems and its components in the United Arab Emirates with emphasis on the types of providers and the role that accrediting, and licensing bodies play in the delivery of health care. The course focuses on the unique characteristics of health care delivery and discusses the major issues and challenges that impact the cost, quality, and access to health care. Emphasis is placed on understanding the historical context; how the UAE health care system developed; and the significant policies that regulate health care organizations, providers, payers, and populations. Students are introduced also to general technology, financial, reimbursement, legal, and strategic planning issues that are essential to managing in the health care environment.

**Course Code: HCM 224**

**Course Title: Legal Aspects and Ethics in Health Management**

**Prerequisites: HCM 120**

**Course Description:**

This course is designed to provide students with an introduction to health law and ethics. It starts with ethical theories, principles, and tools that are important when making ethical decisions. Then explores privacy and confidentiality within the context of the many uses of health information, and covers ethical dilemmas faced in the process of protected health information, clinical coding, pricing, access, and quality management. It addresses the importance of patient safety and organizational values, research, and decision support for data acquisition, access, and reporting. The course will include a discussion of the UAE system of laws and regulations of healthcare providers; legal and ethical issues in providing health care services to patients; legal and ethical issues in organizing, managing, and regulating the delivery of health care services; and legal issues in health insurance programs.

**Course Code: HCM 225**

**Course Title: Hospital Administration**

**Prerequisites: HCM 120**

**Course Description:**

As rapid Scientific, technological, and medical advances in recent years have completely transformed the health care sector. Hospitals have become a dynamic industry. Professionals who are responsible for planning and designing hospitals and those who subsequently manage, maintain, and operate them efficiently find the task of managing change quite challenging. This course is a broad subject that will let students understand the basics as well as the complexities of managing a hospital well. It has lots of ideas for the architect, who conceives of a viable plan for the hospital. It addresses the various issues which must be kept in mind by consultants, planners, and administrators who subsequently run the hospital. This course will cover most, Planning and Designing a hospital: The Correct Way, Planning and Designing Medical and Ancillary Services, Planning and Designing Nursing Services, Supportive Services, Facilities Planning for Managing SARS, CATH Lab, Hospital Information System, and Telemedicine.

**Course Code: BAF301**

**Course Title: Introduction to Financial Management**

**Prerequisites: ACC106**

**Course Description:**

This course is prepared to equip students with the fundamentals of financial management. It includes an overview of financial management, analysis of financial Statement, time value of money, risk and return, working capital management, financial statement analysis, sources of finance, and capital budgeting.

**Course Code: HIM321**

**Course Title: Health Data Concepts**

**Prerequisites: HIM 210**

**Course Description**

This course introduces students to the International Classification of Disease (ICD-10-CM) coding system. Topics covered include the guidelines and terminology for correctly coding diagnoses in a physician's office, hospital, or other healthcare facility as well as the assigning and sequencing of diagnostic and procedural codes. Emphasis will be on the recent change from ICD-9-CM to ICD-10-CM and the implications of this

change.

**Course Code: HCM 325**
**Course Title: First Aid and Safety**
**Prerequisites: BMS 110**
**Course Description**

As rapid Scientific, technological, and medical advances in recent years have completely transformed the health care sector. Hospitals have become a dynamic industry. Professionals who are responsible for planning and designing hospitals and those who subsequently manage, maintain, and operate them efficiently find the task of managing change quite challenging. This course is a broad subject that will let students understand the basics as well as the complexities of managing a hospital well. It has lots of ideas for the architect, who conceives of a viable plan for the hospital. It addresses the various issues which must be kept in mind by consultants, planners, and administrators who subsequently run the hospital. This course will cover most, Planning and Designing a hospital: The Correct Way, Planning and Designing Medical and Ancillary Services, Planning and Designing Nursing Services, Supportive Services, Facilities Planning for Managing SARS, CATH Lab, Hospital Information System, and Telemedicine.

**Course Code: HIM 410**
**Course Title: Medical Coding II**
**Prerequisites: HIM 320**
**Course Description**

This course is a continuation of Coding I and provides students with an introduction to the nomenclature of Current Procedure Terminology (CPT®). Topics include detailed application of the CPT classification system for inpatient services such as surgery and anesthesia as well as for outpatient such as laboratory and radiology. There will also be a discussion of evaluation and management services, as well as the use of modifiers

## Diploma in Medical Laboratory Analysis

**Course Code: MLS 110**
**Course Title: Clinical Laboratory Instrumentation**
**Prerequisites:**
**Course Description:**

This course aims to introduce the practical applications of clinical laboratory instruments and introduces the students to the principles of instrumental methods of analysis including visible and ultraviolet spectrophotometry, flame photometry, chromatography, electrophoresis, radiation counters and automated chemical analyzers. The student will be exposed to sophisticated analytical instruments to enhance laboratory skills and confidence of working in the medical laboratory.

**Course Code: MLS 211**
**Course Title: Medical Microbiology**
**Prerequisites:**
**Course Description:**

This course focuses on the foundation of the basic principles of medical microbiology. The course is designed to provide Medical Laboratory Sciences students with adequate knowledge about microbes, diseases, modes of transmission of infections and infection control measures applied in the context of UAE. The course involves identification of the role of saprophytes, normal commensal flora, and pathogenic microbes that cause common infectious diseases in UAE. The course elaborates the tools and methods for the study of microbes, microbial structure and function, virulence factors as well as microbial genetics and its importance in the virulence of microbes are also dealt with in the course. The basic immune defense mechanism of the host is also considered in this course. Students in practical sessions will experience preparation of bacterial culture media, sterilization and antiseptic techniques and an antibiotic sensitivity test as applied in clinical laboratories within the UAE.

**Course Code: MLS 212**
**Course Title: Basic Hematology**
**Prerequisites: BMS 122**
**Course Description:**

This course is designed to introduce the theoretical and practical aspects of normal hematology and will include the normal composition of blood, collection and storage of blood, hemopoiesis, morphology, structure, and function of red cells, white cells and platelets in addition to the normal hemostasis. The course will provide students with knowledge and skills to perform a variety of lab tests and to know the different components of the blood.

**Course Code: MLS 213**
**Course Title: Immunology**
**Prerequisites:**
**Course Description:**

This course is designed to introduce the student to the fundamentals of this specialized branch of laboratory medicine. It involves the study of the process of immunity, theory, and practice of a wide variety of procedures used in the laboratory. The composites of Innate and Adaptive immunity are discussed and how they interact in recognizing foreign molecules to defend the body against invading microorganisms. Practical aspects of antigen and antibody interactions are investigated

**Course Code: MLS 220**
**Course Title: Histology and Microtechniques**
**Prerequisites: BMS 121**
**Course Description:**

This course is designed to introduce the students to concepts of histology related to the cells and tissue , arrangements of the human body, It deal with the study of the micro anatomical structure and function of the body's major organs of the epithelial; connective; muscular and nervous tissues; structural and functional relationships between cells and tissues in organs; comparative histology of the circulatory; nervous; digestive; integumentary; respiratory; excretory; reproductive; endocrine and sensory systems , laboratory exercises will include the study of prepared slides and of micro techniques; practice on standard methods of microscopic slide preparation.

**Course Code: MLS 222**
**Course Title: Diagnostic Hematology**
**Prerequisites: MLS 212**
**Course Description:**

This course is designed to provide the student with knowledge and practical skills used for differential diagnosis of erythrocytes, leukocytes, platelets, and hemostatic inherited/acquired disorders. Erythrocyte disorders include anemias, hemoglobinopathies, and metabolic anemias. Leukocyte disorders include benign leukocyte disorders, chronic and acute leukemia, proliferative disorders, and hemostatic disorders including platelets disorders (thrombocytosis and thrombocytopenia), vascular disorders, fibrinolytic system disorders and coagulation disorders (hypercoagulable abnormalities and bleeding tendency). Laboratory morphology and additional tests used in the diagnosis of these disorders play an integral role in this course as well as the correlation of clinical and laboratory data

**Course Code: MLS 223**
**Course Title: Transfusion Science**
**Prerequisites: MLS 213**
**Course Description:**

This course introduces the students to the history of blood transfusion and discovery of blood group systems. Inheritance and clinical significance of major blood group systems and their applications in transfusion medicine is discussed together with the techniques of antibody detection and antigen typing. Emphasis is also placed on blood bank techniques including blood grouping, antigen typing, and Anti-human globulin testing. Donor selection and processing, blood component preparation, storage and expiry and indications for use are discussed. Adverse effects of blood transfusion are discussed as well as the pathophysiology and management of Haemolytic Disease of the Newborn (HDNB) and Auto Immune Hemolytic Anaemia (AIHA).

Laboratory exercises include grouping and matching techniques, antibody detection and identification, and other procedures associated with blood bank practice

**Course Code: MLS 210**
**Course Title: Clinical Chemistry I**
**Prerequisites: BMS 123**
**Course Description:**
This course is designed to introduce the student to diagnosis and monitoring of disease using plasma, serum, urine, and other body fluids. Student will gain knowledge and skills in various analytical techniques and methods used in the measurement of various parameters in the blood and other body fluids, and to gain technical skills and knowledge of interpretation of test results in health and disease states. The course mostly covers routine laboratory investigations related to disorders of plasma proteins and amino acids, carbohydrate disorders, lipids and lipoprotein abnormalities, enzymes, blood gases and electrolytes.

**Course Title: Principle of Human Genetics**
**Prerequisites: BMS 123, BMS 122**
**Course Description:**
This course is designed to introduce the student to the study of biological inheritance in humans, the history and principles of heredity at the molecular and cellular level, and the transmission and expression of genetic information. The course enables an improved understanding of genetics topics and their influence on modern life such as the structure of DNA and RNA, gene expression, gene organization, gene regulation and gene transfer. Current issues such as recombinant DNA technology, human heritable diseases and population genetics are included. The course provides a foundation for studies in human biology and related fields regarding the principles of inheritance, structure and function of genetic material, prokaryotic and eukaryotic genes and finally the impact of genetics on population dynamics and evolution.

**Course Code: MLS 221**
**Course Title: Clinical chemistry II.**
**Prerequisites: MLS 210**
**Course Description:**
This course is designed to introduce the student to the various analytical techniques and methods used in the measurement of various parameters in the blood and other body fluids, and to gain technical skills and knowledge of interpretation of test results in health and disease states. The course mostly covers routine laboratory investigations related to disorders such as cardiac function, kidney function, liver function, hormonal abnormalities, pancreatic function, and gastrointestinal disorders.

**Course Code: MLS 225**
**Course Title: Clinical Practice**
**Prerequisites: Semester 1-3 Major courses**
**Course Description:**
Clinical Practice is an integral part of the program in Associate Degree in Medical Laboratory Analysis and is designed to provide graduating students with an opportunity to integrate and apply previously acquired knowledge and technical skills in clinical settings. Under the guidance of experienced Medical Laboratory Professionals and other qualified laboratory preceptors, students learn more about diagnostic test procedures, quality control methods and programs, and instrumentation in the pre-analytical, analytical and post-analytical clinical laboratory. Students also gain an understanding of the roles and functions of the Medical Laboratory Professionals. The Clinical Practice program is conducted in an affiliated hospital laboratory, where students learn by participating in the workload of a supervising preceptor. Students will be equally rotated in four disciplines; Clinical chemistry, Hematology, Microbiology and Histopathology. The focus of this course is on laboratory practice and laboratory organization. The course will introduce students to professional etiquette and health and safety in the clinical laboratories. It will also cover the reception and processing of clinical samples and observation of the most commonly used techniques in each laboratory. The course gives students practical experience in effective communications to ensure accurate and appropriate information transfer. Finally, it helps students find employment by gaining experience they require to enter the world of medical laboratory diagnosis.

## Diploma in Emergency Medical Care

**Course Code: ECM 210**
**Course Title: Introduction To Paramedicine**
**Prerequisites: BMS 122**
**Course Description:**
This course introduces the student to the psychological and physical demands of emergency medical provider. It introduces information in preparation for the student's progress throughout the entire paramedic program. Beginning with a basic introduction to the profession and roles and responsibilities, the foundation of knowledge for the emergency medical care systems. Legal and ethical issues related to the patients and duty of EMS, workforce safety and wellness will be covered.

**Course Code: ECM 211**
**Course Title: Patient Assessment**
**Prerequisites: BMS 122**
**Course Description:**
This course introduces student to the patient assessment undertaken by paramedic. The course provides necessary knowledge and skills for patient assessment and re-assessment including scene size-up, primary and secondary assessment as overview for a trauma and medical patient.

**Course Code: ECM 220**
**Course Title: Airway & Respiratory Emergencies**
**Prerequisites : EMC210 + ECM211**
**Course Description:**
This course is designed to provide the students with the essential knowledge to evaluate and deal with airway and respiratory emergency medical cases including pathophysiological interpretation and assessment. These are emergencies of the upper and lower airway that compromise the respiratory system

**Course Code: ECM 221**
**Course Title: Trauma I**
**Prerequisites :EMC210 + ECM211**
**Course Description:**
This course introduces the Paramedic Student to Trauma and Trauma Systems. It prepares students to Perform Comprehensive Patient Assessment with various Injury Patterns, recognizing various mechanisms of injuries like Blunt Trauma, Penetrating Trauma, and managing Bleeding with External and Internal Haemorrhage, Soft Tissue injuries & Burns, orthopedic injuries and Environmental Injuries

**Course Code: ECM310**
**Course Title: Trauma II**
**Prerequisites: EMC221**
**Course Description:**
This course is designed to provide more focus on practical trauma instruction. It covers: blunt trauma, penetrating trasuma, haemorrhage and shock, soft tissue trauma, burn conditions, musculoskeletal trauma and gaining access and extrication. It also covers the initial aspect of students traumatic skills related to the above topics.

**Course Code: ECM 311**
**Course Title: Cardiovascular I**
**Prerequisites :EMC220**
**Course Description:**
This course focuses on the cardiovascular anatomy and physiology, conducting system of the heart, electrocardiography, as well as interpretation and the treatment of cardiac arrhythmias, interpretation of 3 and 12 lead EKGs (including injury and ischemia patterns, normal and abnormal findings, and the 12 lead as a diagnostic tool) will be covered. Principles of

ACS diagnosis/management will be laboratory focus of this course.

**Course Code: ECM 312**
**Course Title: Medical Emergencies**
**Prerequisites: ECM 220**
**Course Description:**
This course covers medical evaluation and treatment of medical emergencies including pathophysiological interpretation and assessment of pulmonary, neurology, endocrinology, gastroenterology, urology and nephrology, toxicology and substance abuse, Haematology and behavioral disorders. It covers the initial aspect of patient assessment and medical skills related to all above topics.

**Course Code: ECM 313**
**Course Title: Paramedic Clinical Practice I**
**Prerequisites: Level 1-4 Major courses**
**Course Description:**
This course focuses on the cardiovascular anatomy and physiology, conducting system of the heart, electrocardiography, as well as interpretation and the treatment of cardiac arrhythmias, interpretation of 3 and 12 lead EKGs (including injury and ischemia patterns, normal and abnormal findings, and the 12 lead as a diagnostic tool) will be covered. Principles of ACS diagnosis/management will be laboratory focus of this course.

**Course Code: ECM 321**
**Course Title: EMC Operations I**
**Prerequisites: ECM 221**
**Course Description:**
This course prepares the paramedic student to take part in the management of emergency incidents in pre-hospital environment such as vehicle accidents, other major incidents related to injury triangle (driver, road, vehicle) It covers materials related to ambulance operations, medical incident management, vehicle extrication and special rescue awareness & operations, hazardous materials incidents, disasters, crime scene awareness, rural ems, and responding to terrorist acts. Major topics covered.

# COLLEGE OF MEDIA AND PUBLIC RELATIONS

## Bachelor of Mass Communication Concentration in Public Relations

### Core Courses

**Course Code : MCM 101**
**Course Name : مدخل إلى الاعلام الرقمي**
**Prerequisites: None**
**Course Description:**
يتناول هذا المساق تعريف الإعلام الرقمي، واتجاهات تطور الاتصال والإعلام الرقمي، وإجراء مقارنة بين الإعلام التقليدي والجديد، ووسائله الجديدة من حيث نشأتها وأنواعها واستخداماتها كما يتناول نظريات الإعلام الرقمي وقنواته ووظائفه، ودور الإعلام الرقمي في التغير الاجتماعي، وفي التسويق التجاري والاجتماعي، كما يغطي دور الإعلام الرقمي كأداة للتمكين، ويركز على الشبكات الاجتماعية، والعناصر التكنولوجية في الإعلام الرقمي، مع تقديم حالات ونماذج تطبيقية.

**Course Code : MCM 102**
**Course Name : مدخل الى العلاقات العامة**
**Prerequisites: None**
**Course Description:**
يتناول المساق تعريف العلاقات العامة مع عرض لدورها كأداة اتصال في منظومة العمل المؤسسي. يتناول المساق أيضاً الدور التاريخي للعلاقات العامة من الناحية المهنية مع تقديم نماذج للعلاقات العامة وعناصرها و كذلك المواصفات الشخصية والمهنية لمتخصص العلاقات العامة الناجح. يعرض المساق أيضاً الهياكل التنظيمية لإدارات العلاقات العامة في المؤسسات الحكومية والأهلية، و يعرض للعلاقة مع الجمهور و وسائل الإعلام وقنوات الاتصال الداخلي والخارجي، مع تقديم حالات دراسية ونماذج تطبيقية.

**Course Code : MCM 103**
**Course Name : مدخل الى الاتصال المؤسسي والحكومي**
**Prerequisites: None**
**Course Description:**
يتناول هذا المساق ماهية وخصائص الاتصال المؤسسي والحكومي التقليدي والرقمي، أهمية ووظائف الاتصال المؤسسي والحكومي ، والجوانب الأخلاقية والقانونية للاتصال المؤسسي والحكومي بمنظمات الأعمال، وسائل الاتصال الحكومي الرقمية ومقارنتها بالوسائل التقليدية، أنواع الاتصال المؤسسي والحكومي الرقمي بمنظمات الأعمال من حيث الاتجاه والوسيلة والجمهور المستهدف، المهارات الضرورية اللازمة للعاملين بالاتصال المؤسسي والحكومي ، والتخطيط لاستراتيجية الاتصال بالمنظمة، إضافةً إلى أسس ومعايير تقييم أداء وفاعلية الاتصال المؤسسي والحكومي بمنظمات الأعمال، فضلاً عن تناول نماذج لبرامج الاتصال بمنظمات الأعمال بدولة الامارات للتحليل والمقارنة والتدريب.

**Course Code : MCM 105**
**Course Name : مدخل الى التسويق والاعلان**
**Prerequisites : None**
**Course Description:**
يهدف المساق إلى تزويد الطلاب بالمفاهيم الأساسية التي تحكم مجال التسويق وعناصره، وكيفية تأثير هذه العناصر على نجاح الشركات، وتوضيح علاقة التسويق والاعلان، وفهم دور الإعلان كوسيلة للتواصل مع الجمهور المستهدف وزيادة الوعي بالعلامة التجارية وتحفيز الطلب على المنتجات والسلع والخدمات من خلال توضيح كيفية استخدام الأدوات الرقمية الحديثة في التسويق والاعلان. وصولاً لكيفية تصميم وتنفيذ استراتيجيات حملات تسويقية إعلانية فعالة.

**Course Code : MCM 201**
**Course Name : الإعلام في دولة الإمارات**
**Prerequisites : None**
**Course Description:**
يستعرض هذا المساق مسيرة الإعلام في دولة الإمارات العربية المتحدة، متتبعاً جذوره منذ خمسينيات القرن العشرين، ويركز على الأطر القانونية والاستراتيجيات التي شكلت المشهد الإعلامي الإماراتي، كما يبرز المساق الدور الحيوي للإعلام في دفع عجلة التطور الوطني ، وترسيخ الهوية الثقافية للدولة ، يتعمق المساق في دراسة البنية التحتية للقطاع الإعلامي، مسلطاً الضوء على أبرز المؤسسات والشخصيات التي ساهمت في تشكيل هذا القطاع.، ويتناول أيضاً التحولات التقنية التي طرأت على الساحة الإعلامية، مع التركيز على دور الإعلام كمحرك اقتصادي، خاصة مع ظهور المناطق الإعلامية الحرة.يهدف هذا المقرر إلى تقديم رؤية شاملة عن تطور قطاع الإعلام في الإمارات، مبرزاً أهميته كعنصر أساسي في النسيج الاجتماعي والاقتصادي والثقافي للدول.

**Course Code : MCM 204**
**Course Name : مقدمة في الإعلام والذكاء الإصطناعي**
**Prerequisites : CIT101A**
**Course Description:**
يهدف هذا المساق إلى التعرف على مفهوم الذكاء الإصطناعي وخصائصه ووظائفه ومجالات استخداماته، ودوره في المجال الإعلامي، ومدى الاعتماد على تطبيقات الذكاء الإصطناعي في صناعة المحتوى الإعلامي والممارسة المهنية، وحدود استخدام الروبوت في المجال الإعلامي سواء في التحرير وصياغة الأخبار أو التقديم أو التصوير التلفزيوني، أو في العلاقات العامة، وكيفية استخدام الذكاء الإصطناعي في إثراء وتقديم المحتوى الإعلامي بصورة احترافية، فضلاً عن مخاطر تطبيقات الذكاء الإصطناعي وتأثيرها على الوظائف الإعلامية، وأخلاقيات توظيف تطبيقات الذكاء الاصطناعي في النشاط الإعلامي.

**Course Code : MCM 209**
**Course Name : نظريات الاتصال**
**Prerequisites :MCM101**
**Course Description:**
يقدم هذا المساق نظرة عامة على نظريات الاتصال التي تفسر الظواهر المختلفة و تطورها وتطبيقاتها. ستتضمن النظريات المتعلقة بتأثيرات وسائل الاعلام وعلم نفس الجمهور والجوانب الاجتماعية لوسائل الإعلام التقليدى و الرقمى، كما يتناول العديد من النظريات التي تسعى إلى شرح ظاهرة الاتصال في المجتمعات الحديثة و التى يمكن تطبيقها على سياقات الاتصال المختلفة ( الشخصي ،بين الثقافات، الجماهيرى ، الرقمى الجمعي).

**Course Code : MCM 214**
**Course Name : مناهج بحوث الاتصال**

**Prerequisites: MCM 209**

**Course Description:**

يهدف مساق "مناهج بحوث الاتصال" إلى تعريف الطلاب بالمفاهيم الأساسية والأدوات المنهجية المستخدمة في دراسة الاتصال وتحليل الظواهر الإعلامية. يغطي المساق أنواع البحوث الكمية والنوعية، بما في ذلك تقنيات جمع البيانات مثل الاستبيانات، المقابلات، وتحليل المحتوى، بالإضافة إلى الأساليب الإحصائية المستخدمة في تحليل البيانات. يُركز المساق على تطوير مهارات الطلاب في تصميم وتنفيذ البحوث العلمية، وصياغة أسئلة بحثية دقيقة، واختيار المنهجية المناسبة للإجابة على تلك الأسئلة. كما يسعى المساق إلى تعزيز القدرة على تحليل ونقد الدراسات البحثية المنشورة وتقييم فعاليتها، مما يُمكّن الطلاب من إجراء بحوث مستقلة تسهم في تطوير مجال الاتصال.

**Course Code: MCM 215**

**Course Name: تشريعات وقوانين الاعلام**

**Prerequisites :MCM101**

**Course Description:**

يقدم هذا المساق نظرة عامة للمفاهيم الخاصة بقوانين وتشريعات الاعلام ،ودور مواثيق الشرف الاعلامي في تحديد اخلاقيات العمل الاعلامي ،اضافة الى بيان المبادئ والمعايير الاخلاقية التي تهم المهنة الاعلامية ،وخصائص ومصادر التشريعات الاعلامية ،اضافة الى بيان التحديات التي تواجه الاعلام الرقمي والاخلاقيات التي يجب العمل بها ومنح التراخيص الخاصة للمؤثرين في مواقع التواصل الاجتماعي .فضلا عن بيان اهم مواد النشر في قانون الجرائم الالكترونية الاماراتي .

**Course Code: MCM 216**

**Course Name: الشبكات الاجتماعية**

**Prerequisites : MCM 101**

**Course Description:**

يقدم هذا المساق دراسة شاملة للمنصات والتطبيقات التي تربط الأشخاص ببعضهم البعض عبر الإنترنت. ويهدف مساق الشبكات الاجتماعية في المجال الإعلامي الرقمي إلى تزويد الطلاب بمعرفة شاملة حول طبيعة عمل منصات التواصل الاجتماعي وكيفية الاستفادة منها بشكل فعال في المجال الإعلامي وفهم جمهورها. ويهدف المساق إلى التعرف على تاريخ وتطور الشبكات الاجتماعية وأخلاقيات استخدام وسائل التواصل الاجتماعي، والتعرف على الهيكل التقني للشبكات الاجتماعية وفهم أساسيات الشبكات الاجتماعية واستراتيجيات الحملات الإعلامية عبر وسائل التواصل الاجتماعي. والتعرف على أدوات تحليل البيانات المتاحة على منصات التواصل الاجتماعي، وإدارة الأزمات عبر وسائل التواصل الاجتماعي.

**Course Code: MCM 217**

**Course Name: مبادئ التصميم الرقمي**

**Prerequisites : None**

**Course Description:**

يتناول هذا المساق عرض المبادئ والمفاهيم الأساسية المتعلقة بالتصميم الرقمي، ودور التصميم الجرافيكي في المجالات الإعلامية الرقمية المختلفة، وفهم الفوارق الفنية والتقنية في التصميم المطبوع والتصميم الرقمي. كما يقدم جزءاً عملياً يتدرب فيه الطالب على التصميم الجرافيكي للإعلان الرقمي والصحافة الالكترونية التطبيقات الذكية، وذلك باستعمال مختلف البرامج الحاسوبية ذات الصلة.

**Course Code: MCM 218**

**Course Name: مبادئ الكتابة الإعلامية**

**Prerequisites : None**

**Course Description:**

يسعى المساق إلى تمكين الطلاب من فهم مبادئ الكتابة الإعلامية وتطبيقها بشكل عملي. سيتعلم الطلاب كيفية كتابة نصوص إعلامية متنوعة، وتطوير مهاراتهم في التفكير النقدي والتحليلي، وبناء قدراتهم على التواصل الفعال مع الجمهور المستهدف. ويهدف مساق مبادئ الكتابة الإعلامية إلى تزويد الطلاب بالمهارات الأساسية اللازمة لإنتاج نصوص إعلامية احترافية. سيتعلم الطلاب كيفية كتابة الأخبار والمقالات والتقارير الصحفية، مع التركيز على الدقة والوضوح والجاذبية. كما سيتعلمون تحليل النصوص الإعلامية وتقييمها، وصياغة نصوص إبداعية تعبر عن وجهات نظرهم.

**Course Code: MCM 223**

**Course Name: الرأى العام**

**Prerequisites: None**

**Course Description:**

يهدف المساق إلى التعرف على ماهية الرأي العام وأنواعه، وعوامل تكوينه وتغييره وتأثيره على المجتمع، كما يستعرض دور وسائل الإعلام التقليدية والحديثة في تشكيل الرأي العام والتأثير فيه والتأثر به، إلى جانب دراسة نظريات الرأي العام المختلفة وأهمية قياس الرأي العام وطرق قياسه كأداة لفهم توجهات المجتمع، والمعوقات التي تعوق قياسه في المجتمع.

**Course Code: MCM 322**

**Course Name: الترجمة الاعلامية**

**Prerequisites : ENG100**

**Course Description:**

يهدف هذا المساق إلى تطوير مهارات الطلاب في الترجمة الإعلامية بين اللغتين العربية والإنجليزية. يتم التركيز على تقنيات الترجمة المستخدمة في وسائل الإعلام، بما في ذلك الأخبار والمقالات والتقارير. سيقوم الطلاب بتحليل التحديات اللغوية والثقافية التي تواجه المترجم الإعلامي وتطبيق استراتيجيات مناسبة للتغلب عليها.

**Course Name: إدارة المؤسسات الإعلامية**

**Course Code: MCM 402**

**Prerequisites :MCM 103**

**Course Description:**

يهدف المساق إلى تزويد الطلاب بالمعرفة والمهارات اللازمة لإدارة وتشغيل المؤسسات الإعلامية بشكل فعال من خلال التعرف على مبادئ الإدارة العامة وتطبيقها في السياق الإعلامي . كما يهدف المساق إلى فهم العمليات المتعلقة بإنتاج المحتوى الإعلامي، بما في ذلك التخطيط، التنفيذ، والتوزيع . هذا ويستعرض المساق دراسة تأثير التكنولوجيا الحديثة على صناعة الإعلام وما تتطلبه من استراتيجيات طويلة وقصيرة المدى للمؤسسات الإعلامية.

## Major Courses

**Course Code: PRM301**

**Course Name: إدارة العلاقات العامة**

**Prerequisites: MCM 102**

**Course Description:**

يتناول هذا المساق إدارة العلاقات العامة من جميع جوانبها.، بدءً بأهمية إدارة العلاقات العامة في المؤسسات المعاصرة، ووظائفها ووضعيتها في الهيكل التنظيمي والعناصر الأساسية اللازمة لتنظيمها، وأساليب تنظيمها انطلاقاً من طبيعة المؤسسة وحجمها ومستوى نشاطها والجماهير المتعاملة معها. ويهدف المساق إلى تعريف الطالب بأبعاد ادارة العلاقات العامة ومبادئها وعلاقتها كتخصص بالعلوم الإنسانية والاجتماعية وكذلك الجمهور. والتعريف بمفهوم تنظيم إدارة العلاقات العامة، والتعرف على أهمية دراسة تنظيم إدارة العلاقات العامة وأهدافها وأنواعها، وشرح العناصر المؤثرة في تنظيم إدارة العلاقات العامة، إضافةً إلى تعريف الطالب بالأساليب الإدارية لتنظيم عمل إدارات العلاقات العامة في المؤسسات المختلفة، وتوزيع الأنشطة والمهام على أقسام ووحدات الإدارة. وتدريبه على تصميم الهياكل التنظيمية للعلاقات العامة بالمؤسسات بالمستويات الإدارية المتعددة.

**Course Code: PRM302**

**Course Name: الكتابة للعلاقات العامة**

**Prerequisites: MCM218**

**Course Description:**

يتناول هذا المساق مفهوم الكتابة للعلاقات العامة وأهميتها، متطلبات الأسلوب الكتابي للعلاقات العامة، أشكال الكتابة للعلاقات العامة والفرق بينها وبين فنون الكتابة الأخرى، السمات والمهارات اللازمة في الكتابة لممارسي العلاقات العامة وكيفية تنميتها، وخصائص الأسلوب الكتابي للعلاقات العامة، وقواعد الكتابة المتخصصة للعلاقات العامة في مختلف الوسائل الإعلامية التقليدية والتفاعلية. ويهدف المساق إلى تعريف الطالب بأساسيات وقواعد الكتابة في مجال العلاقات العامة، وتمكينه من الجوانب القانونية والأخلاقية التي تحكم وتنظم الكتابة للوسائل الإعلامية، وشرح أهمية الكتابة للعلاقات العامة في المؤسسات والهيئات المختلفة، والتعرف على أشكال وأساليب الكتابة في العلاقات العامة، والتحديات التقنية التي تواجه الكتابة للعلاقات العامة، ودراسة أخلاقيات الكتابة العلاقات العامة ونشاطاتها.فضلاً عن تمكين الطالب من إنتاج مواد كتابية متنوعة في العلاقات العامة

**Course Code: PRM303**

**Course Name: إعداد وإنتاج مواد العلاقات العامة**

**Prerequisites : PRM302**

**Course Description:**

وإكسابه مهارات التغطية الإعلامية للأزمات

**Course Code:PRM410**

**Course Name: تدريب ميداني في العلاقات العامة**

**Prerequisites :Passing 78 hours+ PRM303**

**Course Description:**

يهدف مساق "التدريب الميداني في العلاقات العامة " إلى تزويد الطلاب بتجربة عملية في بيئة عمل حقيقية ضمن مجالات العلاقات العامة . من خلال هذا المساق، يُتاح للطلاب تطبيق المعرفة النظرية التي اكتسبوها في الفصول الدراسية على مهام فعلية، مثل تطوير استراتيجيات الاتصال، تنظيم الفعاليات، تصميم حملات إعلانية، وإدارة العلاقات مع وسائل الإعلام. كما يتعلم الطلاب مهارات حل المشكلات، والتعامل مع الجمهور، وتحليل تأثير الحملات الإعلامية. يساعد المساق في تعزيز القدرات المهنية للطلاب ويعدهم لسوق العمل في مجالات الإعلام والاتصال.

**Course Code:PRM422**

**Course Name: مشروع التخرج في العلاقات العامة**

**Prerequisites : Graduation Class+ PRM410**

**Course Description:**

يتناول هذا المساق تطبيق المجالات المعرفية والمهارات التي تعلمها الطالب في مختلف مساقات العلاقات العامة بواقع العمل الميداني من خلال انجاز مشروع تخرج يستخدم فيه معارفه النظرية ومهاراته العملية ليقدم مشروعاً تطبيقياً من اختياره وبموافقة المشرف والقسم، مثل القيام بمشروع بحثي ميداني أو إنتاج حملة إعلامية، وحملة علاقات عامة ذات صلة بالمجتمع، أو إنتاج مواد علاقات عامة. أو إنتاج مواد علاقات عامة. يطبق من خلالها الطالب أساليب البحث العلمي في تطوير وتنفيذ استراتيجيات العلاقات العامة، مع وضع خطة عمل متكاملة لتنفيذ المشروع، وتحديد المهام والمسؤوليات وتنفيذها في الوقت المحدد لتنفيذ المشروع، مع الامتثال للأخلاقيات المهنية والمعايير القانونية اثناء التنفيذ، ويتم إعداد تقرير شامل يوضح جميع جوانب المشروع، من بداية التخطيط وحتى نهاية التنفيذ.

## Elective Courses

**Course Code: PRM308**

**Course Name: الاتصال الثقافي**

**Prerequisites : None**

**Course Description:**

يهدف المساق إلى فهم كيف تؤثر الثقافة على أساليب التواصل والتفاعل بين الأفراد من خلفيات ثقافية مختلفة واكتشاف أنماط الاتصال المختلفة بين الثقافات ودراسة الحواجز التي تعيق هذا الاتصال . كما يهدف المساق إلى تعزيز الوعي الثقافي وتطوير مهارات التواصل الفعّال عبر الحدود الثقافية.

**Course Code: PRM309**

**Course Name: إدارة الهوية المؤسسية**

**Prerequisites : None**

**Course Description:**

يقدم هذا المساق التعريف بمفهوم الهوية المؤسسية وأساسياته وأساليب إدارتها في بيئة تتسم بالتغير المستدام، ويتطرق المساق إلى كيفية تطوير استراتيجية العلاقات العامة لإدارة الهوية المؤسسية وتطوير استراتيجيات فعالة للتواصل المؤسسي. ويتناول المساق العناصر المرئية والثقافية والتواصلية التي تحدد الهوية المؤسسية. والفرق بين الهوية المؤسسية والعلامة التجارية والشعار. واستراتيجية بناء الهوية المؤسسية، وتطبيق استراتيجيات ويهدف المساق إلى تعريف الطالب الحفاظ على الهوية المؤسسية بالهوية المؤسسية واهميتها بالنسبة لمنظمات الأعمال، وكيفية تحليل واقع الهوية المؤسسية لنماذج من منظمات الأعمال، إضافةً إلى تمكينه من الإلمام بأساليب تقييم الأنشطة الاتصالية الهادفة إلى بناء وتسويق الهوية المؤسسية، فضلاً عن التخطيط لبناء الهوية المؤسسية لمنظمة الأعمال.

**Course Code: PRM310**

**Course Name: تنظيم الفعاليات في العلاقات العامة**

**Prerequisites : None**

**Course Description:**

يتناول هذا المساق أسس تنظيم فعاليات الاحداث الخاصة التي تشتمل عليها برامج العلاقات العامة بكافة أنواعها: ورش العمل، الندوات، المحاضرات، اللقاءات، الأيام الدراسية، المؤتمرات، المعارض، الاحتفالات، وسمات ومواصفات العاملين في هذه الفعاليات وفيه تزويد للطالب بآليات العمل في مجال تنظيم الفعاليات الخاصة وأدواته ومهاراته وعمل نماذج لذلك، ، حيث يتضمن المساق توضيحًا عمليًا لفعاليات الأحداث الخاصة.

مساق تطبيقي عملي يهدف إلى إكساب الطالب المعارف والمهارات الخاصة بالقواعد الأساسية في إعداد وتصميم وانتاج المواد الاعلامية المطبوعة والمسموعة والمرئية لأغراض العلاقات العامة للمنظمة وللتواصل مع الجمهور وفي بناء سمعة المنظمة وصورتها الذهنية و يتضمن المساق ً ايضا أسس إعداد و تصميم مطبوعات ومواد العلاقات العامة الأخرى كالملصقات والكتيبات والمجلات والنشرات الإخبارية والمطويات وبطاقات العمل والمواد الإذاعية والتلفزيونية ، والإعلانات والهدايا الترويجية ً مستخدما التقنيات الحديثة في الإعداد والتصميم والانتاج.

**Course Code: PRM304**

**Course Name:** البروتوكول و المراسم

**Prerequisites: Non**

**Course Description:**

يتناول المساق قواعد وأصول المراسم والاتيكيت وتطبيقاتها في مجال الأحداث الخاصة والمؤتمرات والمعارض والفعاليات ويستعرض قواعد البرتوكول خلال مراسم الافتتاح والاختتام ونظم الأسبقيات والمراسم الافتراضية ويعرف الطالب بقواعد الإتيكيت كالتحية والتعارف وأداب المجاملات في تنظيم الفعاليات كالمؤتمرات والمعارض وغيرها.

**Course Code: PRM305**

**Course Name:بحوث العلاقات العامة**

**Prerequisites : MCM214**

**Course Description:**

يهدف هذا المساق إلى التعرف على مجالات دراسة تنفيذ وإدارة بحوث العلاقات العامة والإعلان والتسويق. ويركز بشكل رئيس على أهمية بحوث العلاقات العامة والإعلان بالنسبة للمنظمات وكيفية تنفيذها، والأساليب العلمية والعملية الحديثة المستخدمة في دراسة جماهير المنظمة، والسوق، والجدوى الاقتصادية منها، فضلًا عن تطبيق خطوات إعداد وتنفيذ بحوث العلاقات العامة والإعلان، والتحديات التي تواجها.

**Course Code: PRM306**

**Course Name: تطبيقات الذكاء الاصطناعي في العلاقات العامة**

**Prerequisites : MCM204**

**Course Description:**

يدرس هذا المساق الذكاء الاصطناعي، مفهومه، أنواعه، وخصائصه، مع التركيز على تطبيقاته في مجال العلاقات العامة. يتناول المساق كيفية استخدام الذكاء الاصطناعي في تحليل البيانات واستطلاعات الرأي لفهم الجمهور، إنشاء محتوى مخصص للحملات الاتصالية، وإدارة السمعة الرقمية. كما يستعرض المساق دور الذكاء الاصطناعي في أتمتة عمليات العلاقات العامة، مثل مراقبة وسائل الإعلام، تتبع الأخبار، وتحليل التغطية الإعلامية. بالإضافة إلى ذلك، يناقش المساق التوجهات الحديثة في استخدام تقنيات الذكاء الاصطناعي لتعزيز استراتيجيات التواصل وبناء علاقات قوية مع الجمهور. ويتناول أيضًا إيجابيات وسلبيات هذه التطبيقات واستشراف تأثيراتها المستقبلية على صناعة العلاقات العامة.

**Course Code: PRM404**

**Course Name: إدارة حملات العلاقات العامة**

**Prerequisites : PRM301**

**Course Description:**

يهدف هذا المساق إلى تقديم فهم شامل لإدارة حملات العلاقات العامة والإعلان. يغطي المساق المفاهيم الأساسية لتخطيط الحملات، وتنفيذ استراتيجيات الاتصالات المتكاملة، من اختيار وسائل الإعلام وتصميم رسائل حملات مستهدفة، وتطوير استراتيجيات لقياس نجاح الحملات وتطوير العلاقات الإعلامية، مع التركيز على استراتيجيات تطوير صورة المؤسسة والعلامة التجارية وإدارة الأزمات.

**Course Code: PRM405**

**Course Name: إدارة الأزمات**

**Prerequisites : PRM301**

**Course Description:**

يهدف المساق إلى تزويد الطالب بالمعارف النظرية عن مفهوم الأزمة والمفاهيم ذات الصلة وأنواعها وأسبابها، وخصائصها ومراحل تطورها ، ودورة حياة الازمة، حيث يبين الأسس التي تقوم عليها إدارة الأزمات واستراتيجيات مواجهتها. كما يعرف الطالب بماهية العلاقة بين العلاقات العامة وإدارة الأزمات من جهة وبينها وبين اتصال الأزمة من جهة أخرى. إضافةً إلى تمكين الطالب من الإلمام بكيفية التخطيط لمواجهة الأزمات والتعامل معها إعلامياً، وتنمية مهاراته بشأن السيناريوهات والأساليب الإعلامية لمواجهة الأزمات المختلفة،

**Course Code: PRM311**
**Course Name: استراتيجيات الاتصال عبر وسائل التواصل الاجتماعي**
**Prerequisites: None**
**Course Description:**
يهدف المساق إلى إكساب الطالب المعارف والمهارات العملية اللازمة لاستخدام منصات التواصل الاجتماعي بفعالية في تطوير وتنفيذ استراتيجيات العلاقات العامة،يركز مقرر المساق على كيفية دمج الأدوات الرقمية الحديثة مع استراتيجيات العلاقات العامة التقليدية لتحقيق النجاح في إدارة السمعة وبناء العلاقات مع الجمهور.

**Course Code: PRM312**
**Course Name: العلاقات العامة الدولية**
**Prerequisites :None**
**Course Description:**
يهدف هذا المساق إلى التعرف على مجالات العلاقات العامة الدولية من حيث كونها نشاط إنساني عابر للحدود. ويشرح مفهوم العلاقات العامة الدولية ومجالاتها المختلفة، ويستعرض مراحل تطورها، ونظرياتها العلمية. كما يتناول المساق أساليب ووسائل وممارسات العلاقات العامة الدولية ووظائفها في سياقات متعددة، فضلًا عن التعرف على التطورات الحاصلة في العلاقات العامة الدولية، لا سيما في عصر العولمة، والعوامل المؤثرة في العلاقات العامة الدولية.

**Course Code: PRM407**
**Course Name: إدارة السمعة**
**Prerequisites : None**
**Course Description:**
هذا المساق يهدف إلى تزويد الطلبة والمتخصصين بفهم شامل للعلاقات العامة وإدارة السمعة باعتبارهما مجالين حيويين في البيئة المؤسسية المعاصرة. يتميز المساق بتقديم مزيج متوازن بين الأسس النظرية والتطبيقات العملية، مما يمكن الطلبة من تطوير مهارات استراتيجية تساعدهم في التعامل مع تحديات التواصل المؤسسي وبناء السمعة.

**Course Code: PRM408**
**Course Name:تحليل البيانات الضخمة**
**Prerequisites :None**
**Course Description:**
يهدف المساق إلى تزويد الطلاب بالمهارات والمعارف اللازمة لفهم وتطبيق تقنيات تحليل البيانات الضخمة في مجال الإعلام. سيتعلم الطلاب كيفية جمع البيانات من مصادر مختلفة، وتنظيفها، وتحليلها، واستخراج المعلومات القيمة منها، وتقديم نتائج التحليل و كيفية استخدامها في تقارير الإعلام الرقمية وتفسير نتائجها.

**Course Code: PRM409**
**Course Name: التسويق الاجتماعي**
**Prerequisites: None**
**Course Description:**
يهدف مساق التسويق الاجتماعي إلى تزويد الطلاب بالمهارات والمعارف اللازمة لبناء وتنفيذ استراتيجيات تسويق اجتماعي فعالة. كما يهدف المساق إلى تمكين الطلاب من تطوير استراتيجيات تسويق اجتماعي تساهم في تحقيق أهداف المؤسسة، سواءً كانت زيادة الوعي بالقضايا الاجتماعية، أو تغيير اتجاهات، أو بناء مجتمع إيجابي متحضر. سيتعلم الطلاب كيفية دمج التسويق الاجتماعي مع جهود العلاقات العامة الشاملة. وكذلك يسعى مساق التسويق الاجتماعي إلى تطوير مهارات الطلاب في تطبيق حملات تسويقية اجتماعية مبتكرة. سيتعلم الطلاب كيفية قياس الأداء وتحسين الاستراتيجيات بناءً على النتائج، مما يجعلهم مؤهلين للعمل في مجال التسويق الاجتماعي.

## Bachelor of Mass Communication Concentration in Digital Media

## Major Courses

**Course Code: DMC302**
**Course Name: الكتابة إلى الإعلام الرقمي**
**Prerequisites : MCM218**
**Course Description:**
يُقدم هذا المساق دراسة متعمقة في فنون الكتابة للإعلام الرقمي، مع التركيز على تطوير المهارات اللازمة لإنتاج محتوى فعّال يناسب مختلف وسائل افعلام الرقمي كما يعالج المساق التحولات الحديثة في الإعلام الرقمي وتأثيرها على المشهد الإعلامي الحالي والمستقبلي، استنادًا إلى أحدث الدراسات ومؤشرات الأداء العالمية والإقليمية. ويغطي المساق استراتيجيات تحليل الجمهور، اختيار وتكييف المحتوى، تحسين محركات البحث ( **SEO**)، وأفضل الممارسات في نشر وإدارة المحتوى لضمان الوصول الأمثل والتفاعل المستدام مع الجمهور المستهدف

**Course Code: DMC303**
**Course Name:صناعة المحتوى الإعلامى**
**Prerequisites : DMC302**
**Course Description:**
يهدف المساق إلى تعريف الطالب مفهوم وطبيعة المنصات الرقمية وخصائصها التقنية والاتصالية، واستخداماتها في مجال الاتصال والاعلام. كما يهدف إلى اكساب الطالب مهارات صناعة المحتوى الاتصالي والإعلامي الرقمي بأنواعه المختلفة النصية والمرئية والجرافيكية من حيث مراحل صناعة المحتوى، تقنيات صناعة المحتوي، العوامل المؤثرة في صناعة المحتوى، أساليب تقديم ونشر ومتابعة المحتوى.

**Course Code: DMC304**
**Course Name:التقديم والإلقاء**
**Course Description: GEN100**
يشتمل هذا المساق علي مجموعة من الموضوعات المتعلقة بأسس الإلقاء والصوتيات وأساليب التقديم الإذاعي والتلفزيوني،والمنصات الرقمية على اختلافها وذلك من خلال تدريب الطلاب على الطبقات الصوتية واستخداماتها وتنمية مهارات الطلاب في الإلقاء.

**Course Code: DMC305**
**Course Name: التصوير والمونتاج الرقمي**
**Prerequisites: MCM 101**
**Course Description:**
يتناول هذا المساق أساسيات تصوير وتحرير الأفلام الرقمية ، حيث ينطلق من المبادئ والاساسية لإنتاج الفيديو والمكونات الرئيسية لتحرير الفيديو الرقمي وبناء المشاهد ومراحل انتاجها، ويركز في جزءه الأول على تعريف الطلاب بأسس التصوير التلفزيوني والسينمائي بأنواعه الداخلي والخارجي، واساسيات الاضاءة والتكوين وتقنيات التصوير بما في ذلك حركات الكاميرا وزوايا التقاط الصورة والمعالجات الرقمية للصور الثابتة والمتحركة.
ويتناول في جزءه الثاني برنامجاً عملياً لابتكار المؤثرات الخاصة من حيث الصوت والصورة والحركة، كما يركز على التطبيقات المتقدمة المستخدمة في برامج تحرير الفيديو الرقمي وتصميم المؤثرات البصرية من خلال ما توفره برامج الحاسوب التصميمية وتقنيات الكروما لإنتاج المؤثرات المرئية.

**Course Code: DMC306**
**Course Name: تطبيقات الذكاء الاصطناعي في الاعلام**
**Prerequisites:MCM204**
**Course Description:**
يدرس هذا المساق الذكاء الاصطناعي، مفهومه، أنواعه، وخصائصه، بالإضافة إلى تطبيقاته في المجال الإعلامي، مثل صناعة المحتوى، صحافة الذكاء الاصطناعي، التسويق الروبوتي، واستخدام تقنيات الذكاء الاصطناعي في اتصالات العلاقات العامة وإدارة الأزمات الإعلامية. كما يتناول المساق اقتصاديات الذكاء الاصطناعي وتوظيفه في وسائل الإعلام، والاتجاهات الحديثة في صناعة المحتوى الإعلامي. بالإضافة إلى ذلك، يناقش المساق إيجابيات وسلبيات استخدام تطبيقات الذكاء الاصطناعي في المجال الإعلامي، واستشراف تأثيراته المستقبلية على صناعة المحتوى الإعلامي.

**Course Code: DMC307**
**Course Name: بحوث الاعلام الرقمي**
**Prerequisites: MCM214**
**Course Description:**
يركز هذا المساق على بحوث الإعلام الرقمي ويستعرض منهجيات البحث المتعلقة بتطورات الجيل الجديد من الويب والبيئة الرقمية. يهدف إلى تمكين الطلاب من فهم وتطبيق الأساليب البحثية النوعية والكمية والتجريبية في تحليل الوسائط الرقمية. من خلال هذا المساق، يتعلم الطلاب صياغة مشكلات البحث، تطوير الفرضيات، تحديد مجتمع البحث والعينة، وجمع البيانات وتحليلها. يُعرّف المساق الطلبة على مقاربات نظريات الإعلام لفهم الظواهر الرقمية واكتساب مهارات في تحليل مضامين الوسائط الرقمية واستنتاج نتائج بحثية دقيقة، ورصد المراجع العلمية المتعلقة بالبحث..

**Course Code: DMC402**

**Course Name: تصميم مواقع الويب**
**Prerequisites :MCM217**
**Course Description:**

يتناول هذا المساق دور الموقع الإلكتروني في مجالات مختلفة مثل الإعلان، البيع بالتجزئة، التعليم، الأخبار والإعلام. ويقدم لغة إنشاء المواقع، HTML)، ويناقش عناصر تخطيط الصفحات وتنسيقها ). كما يتناول إدراج الرسوم CSSباستخدام أوراق الأنماط المتتالية ( في صفحات الويب (بصيغة ثابتة ومتحركة بتنسيقات نقطية ومتجهة وكذلك الفيديو)، وإنشاء صفحات ويب تفاعلية، بالإضافة إلى قضايا الأداء في الرسومات على الويب ومشكلات سهولة الاستخدام في المواقع الإلكترونية، لضمان قدرة الطلاب على إنتاج صفحات ومواقع ويب ذات أسس جيدة.

**Course Code: DMC404**
**Course Name: الإعلام الرقمي وقضايا المجتمع**
**Prerequisites : None**
**Course Description:**

يستكشف هذا المساق التفاعل بين الإعلام الرقمي والقضايا المجتمعية المعاصرة. يركز على تحليل تأثير المنصات الرقمية في تشكيل الوعي العام وصناعة القرار. يغطي المساق أساليب تحليل المحتوى الرقمي، والاعتبارات الأخلاقية في إنتاجه، واستراتيجيات التوعية الفعالة. من خلال الجمع بين النظرية والتطبيق، يُمكّن الطلاب من تقييم وإنتاج محتوى رقمي يستجيب للتحديات المجتمعية بكفاءة.

**Course Code: DMC405**
**Course Name: صحافة البيانات**
**Prerequisites : None**
**Course Description:**

يهدف المساق إلى تعريف الطلاب بالمفاهيم والأدوات والتقنيات اللازمة لاستخدام البيانات في إنتاج قصص صحفية متميزة ومؤثرة، ويعرف من خلاله الطلاب كيفية جمع وتحليل وتفسير البيانات من مصادر مختلفة، وكيفية توظيف هذه البيانات في سرد قصص صحفية تدعمها أدلة رقمية وإحصائية. ويركز المساق كذلك على مهارات التصور البياني للبيانات من خلال استخدام أدوات وبرمجيات متخصصة لعرض المعلومات المعقدة بطريقة بصرية سهلة الفهم.

**Course Code: DMC410**
**Course Name: تدريب ميداني في الإعلام الرقمي**
**Prerequisites: Passing 78 hours+DMC305**
**Course Description:**

يساعد هذا المساق الطلبة في تطبيق الجوانب النظرية في مجالات الإعلام الرقمي والمهارات المكتسبة في بيئة عملية مما يساعدهم في صقل تجربتهم واكتساب خبرات عملية في المجالات ذات الارتباط بالشبكات الإعلامية والقنوات الرقمية ومؤسسات وشركات الإنتاج الإعلامي بتخصصاتها وأشكالها المختلفة والمتنوعة والمشاركة الفعلية في الانتاج وصناعة المحتوى الإعلامي.

**Course Code: DMC422**
**Course Name: مشروع التخرج في الإعلام الرقمي**
**Prerequisites: Graduation Class+ DMC410**
**Course Description:**

يهدف مساق مشروع التخرج في الإعلام الرقمي إلى تمكين الطالب من تطبيق المعارف والمهارات التي اكتسبها خلال دراسته في مجال الإعلام الرقمي. حيث يقوم الطالب بكتابة وإنتاج وإخراج وتصميم مادة اعلامية عن أي موضوع يختاره بإشراف مدرس المساق. يعتبر هذا المساق فرصة للطالب لصقل مهاراته في البحث، والتخطيط، والتنفيذ، والتقييم في مجال الإعلام الرقمي إضافة لجعله يعمل ضمن فريق لتحقيق هدف مشترك ويكون قادر على تحليل المشكلات وتقييم الحلول المختلفة التي يظهر من خلالها قدراته الإبداعية والتحليلية في بيئة عمل محاكية، وتقديم حلول مبتكرة للتحديات التي تواجه صناعة الإعلام الرقمي.

## Elective Courses

**Course Code: DMC308**
**Course Name: الاتصال الثقافي**
**Prerequisites: None**
**Course Description:**

يهدف المساق إلى فهم كيف تؤثر الثقافة على أساليب التواصل والتفاعل بين الأفراد من خلفيات ثقافية مختلفة واكتشاف أنماط الاتصال المختلفة بين الثقافات ودراسة الحواجز التي تعيق هذا الاتصال . كما يهدف المساق إلى تعزيز الوعي الثقافي وتطوير مهارات التواصل الفعّال عبر الحدود الثقافية.

**Course Code: DMC309**
**Course Name: النقد والتحليل الاعلامي**
**Prerequisites: None**
**Course Description:**

يقدم هذا المساق على تحليل ونقد المواد الاعلامية و تعريف الطلبة بكيفية نقدها وتحليلها ، وفق المعايير والممارسات الإعلامية ومدى مطابقة هذه المواد الإعلامية لهذه المعايير من ناحية المضمون والشكل والوسيلة والشخصيات الإعلامية من اجل اظهار محاسن العمل الإعلامي وتصحيح الممارسات الإعلامية الخاطئة في المستقبل وفق أساليب التحليل ونقد الإعلامي العلمي.

**Course Code: DMC310**
**Course Name: السرد القصصي**
**Prerequisites: None**
**Course Description:**

يهدف المساق إلى تعريف الطلاب بماهية السرد القصصي وتقنياته في سياق الإعلام الرقمي، ويركز على تطوير مهارات الطلاب في بناء وتقديم القصص باستخدام الوسائط الرقمية المتعددة بشكل إبداعي. كذلك يعمل المساق على تعليم الطلاب كيفية استغلال التقنيات الرقمية والأدوات التفاعلية لنقل رسالة مؤثرة وجذابة للجمهور المستهدف من خلال مختلف وسائل الاعلام.

**Course Code: DMC311**
**Course Name: صحافة الرأي والاستقصاء**
**Prerequisites:**
**Course Description:**

يقدم هذا المساق نظرة عامة لمفهوم الصحافة الاستقصائية ونشأتها وتطورها واهميتها واوجه الاختلاف بينها وبين الصحافة التقليدية والمناهج الاعلامية المستخدمة فيها اضافة الى القواعد الأخلاقية لها، وبيان خطوات الشروع بالتقارير الاستقصائية ومواصفاتها ودورها في عصر التكنولوجيا والاعلام الرقمي .وبيان فلسفتها ومؤشرات التحرير الاعلامي فيها .

**Course Code: DMC312**
**Course Name: استراتيجيات الاتصال عبر وسائل التواصل الاجتماعي**
**Prerequisites: None**
**Course Description:**

يهدف المساق إلى تزويد الطلاب بمعرفة عميقة بأساليب وأدوات الاتصال الفعالة على منصات التواصل الاجتماعي، وكيفية تطوير استراتيجيات تواصل فعالة تخدم أهداف المؤسسات والأفراد. سيتعلم الطلاب كيفية تحليل الجمهور المستهدف، وإنتاج محتوى جذاب، وقياس أداء الحملات التسويقية عبر وسائل التواصل الاجتماعي.

**Course Code: DMC407**
**Course Name: صناعة البودكاست**
**Prerequisites: None**
**Course Description:**

يقدم هذا المقرر دليلا في عالم صناعة البودكاست، بدءًا من أساسيات التخطيط والإنتاج وصولًا إلى استراتيجيات النشر والتسويق. يغطي المساق الجوانب التقنية مثل التسجيل والتحرير الصوتي، والجوانب الإبداعية كتطوير المحتوى وتقنيات السرد، بالإضافة إلى الجوانب العملية مثل الترويج وتحليل البيانات. يهدف المقرر إلى تزويد الطلاب بالمهارات والمعرفة اللازمة لإنشاء وإدارة بودكاست ناجح، مع التركيز على التطبيق العملي والاتجاهات الحديثة في هذا المجال.

**Course Code: DMC408**
**Course Name: تحليل البيانات الضخمة**
**Prerequisites: None**
**Course Description:**

يهدف المساق إلى تزويد الطلاب بالمهارات والمعارف اللازمة لفهم وتطبيق تقنيات تحليل البيانات الضخمة في مجال الإعلام. سيتعلم الطلاب كيفية جمع البيانات من مصادر مختلفة، وتنظيفها، وتحليلها، واستخراج المعلومات القيمة منها، وتقديم نتائج التحليل و كيفية استخدامها في تقارير الإعلام الرقمية وتفسير نتائجها.

**Course Code: DMC409**
**Course Name: الواقع الافتراضي**
**Prerequisites: None**
**Course Description:**

يهدف هذا المساق إلى دراسة الواقع الافتراضي كأداة حديثة في الاتصال والإعلام. يركز المساق على استعراض وتقييم النظريات التي تدور حول تأثيرات تقنيات الواقع الافتراضي على الإعلام والجمهور،

بالإضافة إلى تحليل الأدوات المستخدمة في تفسير كيفية تفاعل الجمهور مع المحتوى الإعلامي الافتراضي. يتناول المساق المفاهيم حول تأثير الواقع الافتراضي على السلوك الاجتماعي، الإدراك، وتغيير العادات الاتصالية لدى الجمهور، مع التركيز على البحوث والنظريات الحديثة المتعلقة بتلك التقنيات.

## Bachelor of Mass Communication Concentration in Advertising

## Major Courses

**Course Code: ADM302**
**Course Name: كتابة النصوص الإعلانية**
**Prerequisites:MCM218**
**Course Description:**

يهدف المساق الى التعرف على مبادئ كتابة نصوص الإعلانات الصحفية والإذاعية والتلفزيونية، وإعداد النصوص المقروءة والسيناريو الإعلاني، وأساليب إعداد السيناريو الإعلاني البصري، ويتابع عملية تطوير الفكرة الإبداعية وتحويلها إلى نص إعلاني متكامل. ويقوم المساق بتغطية خصائص النصوص الإعلانية لوسائل الإعلام المختلفة، وتحريرها مع توفير نماذج وحالات تطبيقية.

**Course Code: ADM304**
**Course Name: وسائل الاعلان**
**Prerequisites:MCM105**
**Course Description:**

يتناول المساق دراسة وسائل الإعلان المختلفة التقليدية والرقمية، مع التركيز على خصائص كل وسيلة وأساليب توظيفها في الحملات الإعلانية. يستعرض المساق المعايير العلمية لاختيار الوسائل الإعلانية المناسبة وفقاً لطبيعة المنتج/الخدمة والجمهور المستهدف والميزانية المتاحة. كما يدرس المساق التطور التاريخي لوسائل الإعلان وتأثير التكنولوجيا الرقمية على تطور الصناعة الإعلانية. يركز المساق على آليات تخطيط الحملات الإعلانية وتوزيع الميزانيات على الوسائل المختلفة، مع دراسة أساليب قياس فاعلية الوسائل الإعلانية وتقييم نتائجها. يتضمن المساق تطبيقات عملية لتصميم حملات إعلانية متكاملة واختيار المزيج الأمثل من الوسائل الإعلانية، مع عرض وتحليل نماذج ناجحة من الحملات الإعلانية المحلية والعالمية.

**Course Code: ADM 305**
**Course Name: تصميم و إنتاج الإعلان**
**Prerequisites:MCM217**
**Course Description:**

يهدف المساق إلى تزويد الطلاب بالمعرفة النظرية والمهارات العملية في تصميم وإنتاج الإعلانات عبر الوسائط المختلفة، مع التركيز على الأساليب الإبداعية وتقنيات الإنتاج الحديثة ، كما يناقش مفاهيم التصميم وعناصره لمختلف وسائل الإعلام. و يتضمن المساق تطبيقات عملية في حزم برامج التصميم الرقمية. ويغطي نظريات الألوان والرسومات بالإضافة إلى المكونات المطبعية. ويتم خلاله عرض ومناقشة أمثلة تصميمية.

**Course Code: ADM306**
**Course Name: إدارة الحملات الإعلانية**
**Prerequisites: MCM214**
**Course Description:**

إلى تعريف الطالب بمقومات الحملة الإعلانية، المساق هذا يهدف ومراحل التخطيط لها، وتزويده بخلفية معرفية عن كيفية انتاج وتنفيذ الحملة الإعلانية، فضلًا عن التعرف على نماذج تطبيقية للحملات الإعلانية. ويتناول المساق دراسة ادارة الحملات الإعلانية، من خلال تقديم نماذج اتصالية لحملات إعلانية، وتصنيف أنواع الجمهور المستهدف للحملات الإعلانية، وكالات الإعلان ووظائفها وعلاقتها بمنفذي الحملات، ومتطلبات تصميم الحملات ومراحل تخطيطها، كما يشتمل المساق على وصف لوسائل الاعلام المستخدمة في الحملات الإعلانية، وكيفية اختيارها من خلال عرض عيوب ومميزات كل منها، وتقييم الحملات الإعلانية ومجالات تقييمها وأهميتها، والتحديات التي تواجهها.

**Course Code: ADM315**
**Course Name: بحوث الإعلان**
**Prerequisites: ADM305**
**Course Description:**

يقدم هذا المساق دراسة شاملة لأساليب البحث العلمي وتطبيقها في مجال الإعلان. يُركز على أسس تصميم وتنفيذ وتحليل البحوث الإعلانية لفهم سلوك المستهلك، تقييم الحملات الإعلانية، واستكشاف الاتجاهات الإعلانية. كما يعزز المهارات البحثية للطلاب عبر دمج الجوانب النظرية والتطبيقية.

**Course Code: ADM402**
**Course Name: الاتصالات التسويقية المتكاملة**
**Prerequisites: None**
**Course Description:**

يتناول المساق مفهوم الاتصال التسويقي المتكامل متضمنا عملية التخطيط والإدارة وصولا إلى تنفيذ الأنشطة الاتصالية-التسويقية المتكاملة. ويناقش المساق مفهوم الخليط الإعلامي والتسويقي. كما يتناول تخطيط ومتابعة وتقييم أنشطة الاتصالات التسويقية مع عرض لأنواعها ومضامينها. يتعرض المساق أيضا لبحوث السوق والجماهير وتعريف الموارد البشرية والفنية ويدعم كل هذا بحالات دراسية ونماذج محددة.

**Course Code: ADM404**
**Course Name: استراتيجيات الإعلان**
**Prerequisites: None**
**Course Description:**

يهدف هذا المساق إلى توفير فهم شامل لاستراتيجيات الإعلان. يغطي المساق المفاهيم الأساسية والمنهجيات المستخدمة في تخطيط وتصميم وتنفيذ استراتيجيات إعلانية فعالة. تتضمن الموضوعات اختيار الوسائل الإعلامية الاستراتيجية، صياغة الرسائل الاعلانية الاستراتيجية، قياس فعالية الحملات، ومواءمة الاستراتيجيات مع أهداف العلامة التجارية.

**Course Code: ADM405**
**Course Name: تطبيقات الذكاء الاصطناعي في الإعلان**
**Prerequisites: MCM204**
**Course Description:**

يدرس هذا المساق الذكاء الاصطناعي، مفهومه، أنواعه، وخصائصه، مع التركيز على تطبيقاته في مجال الإعلان. يتناول المساق كيفية استخدام الذكاء الاصطناعي في تحسين استهداف الإعلانات، إنشاء محتوى إعلاني مخصص، تحليل سلوك المستهلكين، وتطوير استراتيجيات تسويقية فعّالة. كما يستعرض المساق دور الذكاء الاصطناعي في أتمتة عمليات الإعلان، مثل تصميم الإعلانات، جدولة الحملات، وتحليل نتائجها. بالإضافة إلى ذلك، يناقش المساق التوجهات الحديثة في استخدام تقنيات الذكاء الاصطناعي لتعزيز تجربة المستخدم وزيادة العائد على الاستثمار في الحملات الإعلانية. ويتناول أيضًا إيجابيات وسلبيات هذه التطبيقات واستشراف تأثيراتها المستقبلية على صناعة الإعلان.

**Course Code: ADM406**
**Course Name: الابداع في الاعلان**
**Prerequisites:ADM302**
**Course Description:**

يتناول المساق مفهوم الإبداع في الاعلان والقدرة على توليد أفكار جديدة ومبتكرة، وإيجاد حلول غير تقليدية للتحديات والمشكلات الخاصة بعملية الإعلان بالخروج عن المألوف والتفكير بطرق غير نمطية، حيث يعتمد على انتاج اعلان من الخيال والتجربة والمرونة في معالجة الأمور، كما يعزز التطور والابتكار في الاعلان.

**Course Code: ADM410**
**Course Name: تدريب ميداني في الإعلان**
**Prerequisites: Passing 78 hours+ ADM306**
**Course Description:**

يهدف مساق التدريب العملي في الإعلان إلى تزويد الطلبة بالمهارات العملية والتطبيقية اللازمة لتصميم وتنفيذ حملات إعلانية فعّالة ومبتكرة. يركز المساق على ربط النظريات والمفاهيم الأكاديمية بالتطبيقات الواقعية في بيئة العمل، من خلال تطوير مهارات التفكير الإبداعي، والتخطيط الاستراتيجي، واستخدام أدوات وتقنيات الإعلان الحديثة. كما يسعى إلى تعزيز قدرات الطلبة في تحليل احتياجات السوق، استهداف الجمهور المناسب، وصياغة رسائل إعلانية مقنعة وملهمة. يُعزز المساق تجربة التعلم التفاعلية من خلال العمل على مشاريع حقيقية أو محاكاة مهنية، مما يؤهل الطلبة للاندماج في سوق العمل بثقة وكفاءة عالية.

**Course Code: ADM422**
**Course Name: مشروع التخرج في الإعلان**
**Prerequisites: Graduation Class+ ADM410**
**Course Description:**

يسعى المساق إلى تمكين الطلاب من تطبيق المعرفة والمهارات التي اكتسبوها خلال دراستهم في مجال الإعلان، من خلال العمل

يتناول المساق العوامل النفسية والسلوكية المؤثرة في الرسائلعلى مشروع إعلاني شامل. يقوم من خلاله الطلاب بتصميم وتنفيذ حملات إعلانية مبتكرة باستخدام التقنيات الحديثة والوسائل الإعلامية المختلفة، مع مراعاة القوانين والأخلاقيات المنظمة في هذا المجال. وذلك لتطوير قدرة الطالب على العمل الجماعي، البحث، الإبداع، وتحليل البيانات باستخدام التكنولوجيا الحديثة في مجال الإعلان.

## Elective Courses

**Course Code: ADM308**
**Course Name: الاتصال الثقافي**
**Prerequisites: Non**
**Course Description:**

يهدف المساق إلى فهم كيف تؤثر الثقافة على أساليب التواصل والتفاعل بين الأفراد من خلفيات ثقافية مختلفة واكتشاف أنماط الاتصال المختلفة بين الثقافات ودراسة الحواجز التي تعيق هذا الاتصال . كما يهدف المساق إلى تعزيز الوعي الثقافي وتطوير مهارات التواصل الفعّال عبر الحدود الثقافية.

**Course Code: ADM309**
**Course Name: الإعلان الرقمى**
**Prerequisites: Non**
**Course Description:**

يهدف المساق إلى تقديم فهم شامل لمبادئ وتقنيات الإعلان الرقمي، مع التركيز على الاستراتيجيات الإعلانية الحديثة وتطبيقاتها في بيئات الإعلام الرقمي. يتناول المساق الأنواع المختلفة من الإعلانات الرقمية وأساسيات تخطيط وتنفيذ الحملات الإعلانية الرقمية، بالإضافة إلى أسس تصميم إعلانات مبتكرة تتماشى مع تطورات المنصات الرقمية. كما يتناول الجوانب الأخلاقية والقانونية في الإعلان الرقمي لضمان تحقيق أعلى مستويات المصداقية والثقة بين المعلن والجمهور/المستهلكين.

**Course Code: ADM310**
**Course Name: إدارة الاعلان والتسويق**
**Prerequisites: Non**
**Course Description:**

يهدف المساق إلى التعرف على مفهومي إدارة الاعلان والتسويق ، و التعرف على وظائفهما و التي يتم من خلالها تنظيم دور المعلن في العملية الإعلانية. هذا ويركز المساق على كيفية استخدام الأدوات الرقمية لزيادة التفاعل مع الجمهور المستهدف وتحقيق الأهداف التسويقية. بالإضافة إلى تزويد الطلاب بالمعرفة والمهارات اللازمة لتصميم وتنفيذ حملات تسويقية فعّالة.

**Course Code: ADM311**
**Course Name: الإعلان وسلوك المستهلك**
**Prerequisites: Non**
**Course Description:**

يتناول المساق الإعلان وتأثيره على سلوك المستهلك من خلال دراسة عدة عوامل مثل: عملية اتخاذ القرارات الشرائية وتجزئة السوق وتصميم الموقع التنافسي للمنتج، وتاثير ثقافة المجتمع والطبقة الاجتماعية والأسرة على سلوك المستهلك، الجماعات المرجعية في الاستهلاك، الظروف المحيطة بالموقف الشرائي، ودوافع السلوك الاستهلاكي بالإضافة الى مناقشة حالات دراسية متنوعة. ودراسة أدوات ووسائل التسويق المرتبطة بالإعلان ومدى ارتباطها بالسلوك الاستهلاكي.

**Course Code: ADM312**
**Course Name: العلامات التجارية والشعار**
**Prerequisites: Non**
**Course Description:**

يهدف هذا المساق إلى تقديم معالجة شاملة ومعاصرة لموضوعات: العلامات التجارية، وقيمة العلامة التجارية، والإدارة الاستراتيجية للعلامة التجارية، تصميم وتنفيذ البرامج والأنشطة التسويقية لبناء وقياس وإدارة العلامة التجارية، وتحديد قيمة العلامة التجارية وتطوير استراتيجياتها وتحسين التواصل الخاص بالعلامة التجارية وبناء تجربة متميزة للعملاء مع العلامة التجارية ورفع مستوى الولاء للعلامة التجارية. إضافةً إلى الشعارات من حيث المفهوم والأهمية والخصائص والدلالات الشكلية واللونية، كما يهدف المساق إلى تزويد الطلاب بالمفاهيم والتقنيات لتحسين ربحية استراتيجيات العلامة التجارية.

**Course Code: ADM407**
**Course Name: سيكولوجية الاعلان**
**Prerequisites: Non**
**Course Description:**

يتناول المساق العوامل النفسية والسلوكية المؤثرة في الرسائل الإعلانية، وسلوك المستهلك، مع دراسة النظريات الأساسية في علم النفس الإعلاني ، وآليات الإدراك والتعلم الاعلاني، يهدف المساق إلى تزويد الطلاب بالمهارات التحليلية والعملية اللازمة لفهم السلوك الاستهلاكي، وتطوير استراتيجيات إعلانية فعالة.

**Course Code: ADM408**
**Course Name: تحليل البيانات الضخمة**
**Prerequisites: Non**
**Course Description:**

يهدف المساق إلى تزويد الطلاب بالمهارات والمعارف اللازمة لفهم وتطبيق تقنيات تحليل البيانات الضخمة في مجال الإعلام. سيتعلم الطلاب كيفية جمع البيانات من مصادر مختلفة، وتنظيفها، وتحليلها، واستخراج المعلومات القيمة منها، وتقديم نتائج التحليل وكيفية استخدامها في تقارير الإعلام الرقمية وتفسير نتائجها.

**Course Code: ADM409**
**Course Name: التسويق الاجتماعي**
**Prerequisites: Non**
**Course Description:**

يهدف مساق التسويق الاجتماعي إلى تزويد الطلاب بالمهارات والمعارف اللازمة لبناء وتنفيذ استراتيجيات تسويق اجتماعي فعالة. كما يهدف المساق إلى تمكين الطلاب من تطوير استراتيجيات تسويق اجتماعي تساهم في تحقيق أهداف المؤسسة، سواءً كانت زيادة الوعي بالقضايا الاجتماعية، أو تغيير اتجاهات، أو بناء مجتمع إيجابي متحضر. سيتعلم الطلاب كيفية دمج التسويق الاجتماعي مع وكذلك يسعى مساق التسويق .جهود العلاقات العامة الشاملة الاجتماعي إلى تطوير مهارات الطلاب في تطبيق حملات تسويقية اجتماعية مبتكرة. سيتعلم الطلاب كيفية قياس الأداء وتحسين الاستراتيجيات بناءً على النتائج، مما يجعلهم مؤهلين للعمل في مجال التسويق الاجتماعي.

# Bachelor of Mass Communications Concentration in Institutional and Government Communication

## Major Courses

**Course Code : GCM301**
**Course Name: الاتصال التنظيمي**
**Prerequisites: MCM 103**
**Course Description**

يهدف هذا المساق إلى تعريف الطلاب بمفهوم الاتصال التنظيمي وأهميته في المؤسسات الحكومية. ويركز المساق على أساليب واستراتيجيات الاتصال الداخلي والخارجي التي تسهم في تعزيز الأداء المؤسسي وتحقيق أهداف المؤسسة. ويتناول المساق كيفية إدارة التواصل داخل المؤسسة ومع الجمهور الخارجي، بما يعزز الشفافية والكفاءة..

**Course Code: GCM302**
**Course Name: المتحدث الرسمي**
**Prerequisites: GEN100**
**Course Description**

يقدم هذا المساق دراسة معمقة لدور ومسؤوليات المتحدث الرسمي في المؤسسات المختلفة. يتعلم الطلاب استراتيجيات الاتصال الفعّال، إدارة الأزمات، العلاقات مع وسائل الإعلام، ومهارات التحدث أمام الجمهور. يركز المساق على تطوير المهارات العملية من خلال محاكاة مواقف حقيقية ودراسة الحالات، لإعداد الطلاب للظهور بثقة في المحافل العامة والتعامل مع وسائل الإعلام.

**Course Code : GCM303**
**Course Name: إعداد وإنتاج مواد الاتصال المؤسسي والحكومي**
**Prerequisites: MCM209**
**Course Description**

مساق تطبيقي عملي يهدف إلى إكساب الطالب المعارف والمهارات اللازمة في إعداد وتصميم وإنتاج المواد الاعلامية المطبوعة والمسموعة والمرئية والإلكترونية التي تلبي أغراض واحتياجات الاتصال الحكومي والمؤسسي و يتناول المساق أيضا البرامج والتقنيات الحديثة المستخدمة في إعداد وإنتاج المطبوعات كالملصقات والكتيبات والمجلات والنشرات الإخبارية والمطويات والمواد المرئية كالفيديو الترويجي والإعلانات والهدايا الترويجية.

**Course Code: GCM304**
**Course Name : تنظيم الفعاليات**

**Prerequisites: Non**

**Course Description**

يهدف المساق إلى إكساب الطالب المعارف والمهارات العملية التي يحتاجها لتنظيم الفعاليات وتطوير مهاراته التنظيمية والإعلامية والإدارية وتحسين طرق تنظيم وإدارة الفعاليات لأغراض الاتصال الحكومي وبناء سمعة المنظمة وصورتها الذهنية و يتضمن المساق تزويد الطلاب بالمفاهيم الأساسية في تنظيم الفعاليات وأعمال اللجان، وتحليل الاحتياجات وتخطيط البرامج والخطط الزمنية والميزانيات واختيار المكان المناسب وتسويق الفعالية وجذب المشاركين وتوفير وسائل الإعاشة والإقامة والنقل وغيرها من المتطلبات المتعلقة بتنظيم الفعاليات.

**Course Code : GCM305**

**Course Name : بحوث الاتصال المؤسسي والحكومي**

**Prerequisites: MCM214**

**Course Description**

يقدم هذا المساق دراسة شاملة لبحوث الاتصال الحكومي والمؤسسي، حيث يستعرض مفاهيم ونظريات الاتصال ذات الصلة بالقطاع العام والخاص. يهدف إلى تمكين الطلاب من فهم طرق البحث الكمي والنوعي، واستخدام أدوات البحث لجمع البيانات وتحليلها. كما يتناول المساق كيفية تصميم استراتيجيات الاتصال الفعالة التي تستجيب لمتطلبات الجمهور وتساعد في تعزيز الشفافية والمشاركة المجتمعية.

**Course Code : GCM306**

**Course Name : إدارة حملات الاتصال المؤسسي والحكومي**

**Prerequisites: GCM 301**

**Course Description**

يهدف هذا المساق إلى دراسة أسس إدارة حملات الاتصال المؤسسي والحكومي. يركز المساق على تحليل استراتيجيات الاتصال الفعالة، وكيفية تصميم وتنفيذ حملات تعزز من صورة المؤسسات الحكومية والخاصة. يتناول المساق التحديات التي تواجه الاتصال الحكومي والممارسات المثلى لتوجيه الرسائل العامة. كما يتناول تحليل وسائل الإعلام المختلفة وأثرها على فعالية الحملات، بالإضافة إلى دراسة العوامل الداخلية والخارجية المؤثرة على استراتيجيات الاتصال.

**Course Code: GCM401**

**Course Name : الاتصال وادارة الازمات**

**Prerequisites: GCM 301**

**Course Description**

يهدف هذا المساق إلى تعريف الطلبة بالمفاهيم والنظريات الأساسية في مجال الاتصال وإدارة الأزمات، مع التركيز على دور الاتصال الفعال في التعامل مع الأزمات المؤسسية. يتناول المساق مراحل إدارة الأزمات الثلاث: ما قبل الأزمة، وأثناء الأزمة، وما بعد الأزمة، مع التركيز على استراتيجيات الاتصال المناسبة لكل مرحلة. كما يستعرض المساق أساليب التخطيط للاتصال في الأزمات، وتقنيات التواصل مع وسائل الإعلام والجمهور، وإدارة المعلومات خلال الأزمات، وآليات بناء وتنفيذ خطط الاتصال في الأزمات. يتضمن المساق دراسة حالات واقعية لأزمات مؤسسية وتحليل استراتيجيات الاتصال المستخدمة في إدارتها، مع التركيز على دور التكنولوجيا الحديثة ومنصات التواصل الاجتماعي في إدارة اتصالات الأزمات.

**Course Code: GCM402**

**Course Name : تطبيقات الذكاء الاصطناعي والاتصال الحكومي والمؤسسي**

**Prerequisites: MCM204**

**Course Description**

يتناول المساق دراسة استخدام تطبيقات الذكاء الاصطناعي لأتمتة العمليات التواصلية داخل المؤسسة، بما يعزز من كفاءة التفاعل ويقلل الجهد والوقت المبذولين. كما يُميز بوضوح دور هذه التطبيقات في تحسين إدارة العلاقات العامة والسمعة الرقمية، ما يساهم في بناء صورة إيجابية للمؤسسة وتعزيز ثقة الجمهور. إلى جانب ذلك، يؤهل الطالب معرفة كيفية استخدام تطبيقات الذكاء الاصطناعي لتحسين تجربة الموظفين عبر أدوات مبتكرة تسهم في رفع مستوى الرضا الوظيفي. وأخيراً، يتمكن من تقييم فعالية الاتصالات المؤسسية، مستعيناً بتطبيقات الذكاء الاصطناعي لتحقيق استراتيجيات اتصال متقدمة وذات أثر ملموس.

**Course Code : GCM403**

**Course Name : إدارة السمعة**

**Prerequisites: Non**

**Course Description**

يهدف المساق إلى التعرف على مفهوم السمعة وأهميتها في السياقات المختلفة وعلى مستوى الأفراد و المؤسسات ، بالإضافة إلى التعرف على أدوات تقييم السمعة و أساليب تحليلها كاستطلاعات الرأي و تحليل وسائل الإعلام . كما يستعرض الاستراتيجيات الفعالة لبناء وتحسين السمعة ، إلى جانب دراسة مهارات التواصل الفعال لتحسين السمعة ، واستخدام تقنيات الاعلام الرقمي لإدارتها وتطويرها.

**Course Code: GCM410**

**Course Name : تدريب ميداني في المؤسسي والحكومي**

**Prerequisites: Passing 78 hours+ GCM 303**

**Course Description**

يهدف مساق "التدريب الميداني في الاتصال الحكومي" إلى تزويد الطلاب بتجربة عملية في بيئات عمل حكومية ، حيث يتعلمون كيفية تطوير وتنفيذ استراتيجيات الاتصال الفعالة بين المؤسسات الحكومية والجمهور. يركز المساق على تمكين الطلاب من تطبيق المهارات المكتسبة في مجالات التخطيط الإعلامي، كتابة البيانات الصحفية، إدارة الأزمات الإعلامية، وتنظيم الفعاليات الحكومية. من خلال التدريب الميداني، يكتسب الطلاب خبرة عملية في تعزيز الشفافية، بناء الثقة مع الجمهور، واستخدام أدوات الاتصال الرقمي للتواصل الحكومي بفعالية.

**Course Code : GCM422**

**Course Name : مشروع التخرج في الإتصال المؤسسي والحكومي**

**Prerequisites: Graduation Class+ PRM410**

**Course Description**

يسعى هذا المساق إلى تمكين الطلاب من تطبيق المعرفة النظرية والعملية التي اكتسبوها في مجال الاتصال المؤسسي والحكومي، من خلال تقديم مشروعً تطبيقيا من اختيار الطلاب وبموافقة المشرف والقسم، عبر تصميم وتنفيذ مشاريع عملية حقيقية في المؤسسات الحكومية وغير الحكومية. حيث يعمل الطلاب على تحليل، وإنتاج، وتقييم الأنشطة الاتصالية المختلفة وفقًا للأهداف والمهام الاستراتيجية للمؤسسات الحكومية والخاصة. كما يهدف المساق إلى تطوير مهارات الطلاب في العمل الجماعي، والتخطيط الاستراتيجي، والابتكار في الأنشطة الاتصالية، وإعداد المواد الاتصالية المتنوعة بما يتناسب مع فئات الجمهور المستهدف.

## Elective Courses

**Course Code: GCM 308**

**Course Name : الاتصال الثقافي**

**Prerequisites: Non**

**Course Description**

يهدف المساق إلى فهم كيف تؤثر الثقافة على أساليب التواصل والتفاعل بين الأفراد من خلفيات ثقافية مختلفة واكتشاف أنماط الاتصال المختلفة بين الثقافات ودراسة الحواجز التي تعيق هذا الاتصال . كما يهدف المساق إلى تعزيز الوعي الثقافي وتطوير مهارات التواصل الفعّال عبر الحدود الثقافية.

**Course Code : GCM309**

**Course Name : إدارة الهوية المؤسسية**

**Prerequisites: Non**

**Course Description**

يقدم هذا المساق التعريف بمفهوم الهوية المؤسسية وأساسياته وأساليب إدارتها في بيئة تتسم بالتغير المستدام، ويتطرق المساق إلى كيفية تطوير استراتيجية العلاقات العامة لإدارة الهوية المؤسسية وتطوير استراتيجيات فعالة للتواصل المؤسسي. ويتناول المساق العناصر المرئية والثقافية والتواصلية التي تحدد الهوية المؤسسية. والفرق بين الهوية المؤسسية والعلامة التجارية والشعار. واستراتيجية بناء الهوية المؤسسية، وتطبيق استراتيجيات الحفاظ على الهوية المؤسسية. ويهدف المساق إلى تعريف الطالب بالهوية المؤسسية واهميتها بالنسبة لمنظمات الأعمال، وكيفية تحليل واقع الهوية المؤسسية لنماذج من منظمات الأعمال، إضافةً إلى تمكينه من الإلمام بأساليب تقييم الأنشطة الاتصالية الهادفة إلى بناء وتسويق الهوية المؤسسية، فضلاً عن التخطيط لبناء الهوية المؤسسية لمنظمة الأعمال.

**Course Code: GCM 310**

**Course Name : الاتصالات التسويقية المتكاملة**

**Course Description**

يتناول المساق مفهوم الاتصال التسويقي المتكامل متضمنا عملية

التخطيط والإدارة وصولا إلى تنفيذ الأنشطة الاتصالية-التسويقية المتكاملة. ويناقش المساق مفهوم الخليط الإعلامي والتسويقي. كما يتناول تخطيط ومتابعة وتقييم أنشطة الاتصالات التسويقية مع عرض لأنواعها ومضامينها. يتعرض المساق أيضا لبحوث السوق والجماهير وتعريف الموارد البشرية والفنية ويدعم كل هذا بحالات دراسية ونماذج محددة.

**Course Code: GCM 311**
**Course Name: الاتصال الدبلوماسي**
**Prerequisites: Non**
**Course Description**

يهدف المساق إلى التعرف مفهوم الاتصال الدبلوماسي و أهميته في العلاقات الدولية ، بالإضافة إلى ضرورة التمييز بين أنواع الاتصال الرسمي وغير الرسمي . كما يهدف المساق إلى تطوير استراتيجيات الاتصال الدبلوماسي على اختلاف مستوياتها " الحكومات ، المنظمات ، و وسائل الإعلام". كما يستعرض المساق ضرورة استخدام التكنولوجيا ووسائل التواصل الاجتماعي في تعزيز الاتصال الدبلوماسي.

**Course Code: GCM 312**
**Course Name : الاستراتيجيات الحكومية لدولة الامارات**
**Prerequisites: Non**
**Course Description**

يهدف المساق إلى تزويد الطلاب بفهم عميق للرؤية المستقبلية لدولة الإمارات العربية المتحدة، والاستراتيجيات والسياسات التي تتبعها لتحقيق هذه الرؤية ، بجانب تغطية مختلف الجوانب المتعلقة بالتخطيط الاستراتيجي الحكومي، بدءًا من الرؤى والرسائل الأساسية وصولاً إلى آليات التنفيذ والتقييم.

**Course Code : GCM 407**
**Course Name: المراسم وتنظيم الفعاليات**
**Prerequisites: Non**
**Course Description:**

يهدف مساق المراسم وتنظيم الفعاليات إلى تزويد الطلاب بالمهارات والمعارف اللازمة لإدارة وتنظيم الفعاليات الرسمية وغير الرسمية بكفاءة عالية، سواء كانت هذه الفعاليات داخل المؤسسات الحكومية أو في إطار العلاقات العامة. يعتبر هذا المساق حجر الزاوية في برنامج الاتصال الحكومي والمؤسسي، حيث يوفر للطلاب الأدوات اللازمة للتعامل مع البروتوكولات الدبلوماسية، وتنظيم الفعاليات الكبرى، وإدارة الأزمات التي قد تنشأ خلال هذه الفعاليات.

ويعتبر مساق المراسم وتنظيم الفعاليات من المساقات الأساسية في برنامج الاتصال الحكومي والمؤسسي، حيث يزود الخريجين بالمهارات اللازمة للعمل في مختلف القطاعات الحكومية والخاصة، ويؤهلهم للتعامل مع الأحداث والمناسبات الرسمية بكفاءة عالية. كما يساهم المساق في بناء صورة إيجابية للمؤسسة التي يعمل بها الخريج، ويعزز من مكانته المهنية.

**Course Code : GCM 408**
**Course Name : تحليل البيانات الضخمة**
**Prerequisites: Non**
**Course Description**

يهدف المساق إلى تزويد الطلاب بالمهارات والمعارف اللازمة لفهم وتطبيق تقنيات تحليل البيانات الضخمة في مجال الإعلام. سيتعلم الطلاب كيفية جمع البيانات من مصادر مختلفة، وتنظيفها، وتحليلها، واستخراج المعلومات القيمة منها، وتقديم نتائج التحليل وكيفية استخدامها في تقارير الإعلام الرقمية وتفسير نتائجها.

**Course Code : GCM 409**
**Course Name : فن الإقناع والتفاوض**
**Prerequisites: Non**
**Course Description**

يهدف هذا المساق إلى تمكين الطالب من أساسيات فن الإقناع والتفاوض وتطوير مهاراته في التأثير الفعّال. يتناول المساق الأطر النظرية والعملية لاستراتيجيات الإقناع، والأساليب المتبعة في بناء الحجج المنطقية وتقديمها. كما يركز على تقنيات التواصل المؤثر وفهم ديناميكيات التفاوض، مع التركيز على دراسة السلوك الإنساني وآليات اتخاذ القرار. يتعرف الطالب خلال المساق على أحدث الأساليب والتقنيات المستخدمة في مجال الإقناع.

## Master of Arts in Communication and Digital Media

### Major Courses

**Course Code: CDM501**
**Course Name: نظريات الاتصال والإعلام الرقمي**
**Prerequisites: Non**
**Course Description**

يتناول هذا المساق تعريف الطلاب بأهم نظريات الاتصال التقليدية والرقمية ودورها في فهم الإعلام الرقمي وتأثيراته على المجتمعات المختلفة. كما يسعى إلى تحليل كيف أثرت التقنيات الرقمية على نماذج الاتصال والإعلام، كما يدرس المساق كيفية تأثير الإعلام الرقمي على الجمهور والمجتمع والثقافة، بالإضافة إلى دراسة التطبيقات العملية لهذه النظريات في وسائل الإعلام الرقمية الحديثة في صناعة الأخبار والمحتوى الإعلامي مع تطبيق النظريات في دراسة وتحليل قضايا ومشكلات الإعلام الرقمي المعاصرة. وتطوير مهارات البحث العلمي وكتابة الأوراق البحثية في مجال نظريات الإعلام الرقمي على المستويين المحلي والعالمي.

**Course Code: CDM502**
**Course Name: الاعلام والثقافة والمجتمع**
**Prerequisites: Non**
**Course Description**

يركز هذا المساق على دراسة العلاقة التفاعلية بين الإعلام والثقافة والمجتمع من خلال تحليل دور الإعلام في تشكيل الهويات الثقافية والاجتماعية. يستكشف المساق التأثيرات المتبادلة بين التكنولوجيا والمجتمع وتأثيرها على المؤسسات الإعلامية وممارساتها. كما يناقش المساق توجهات أبرز المدارس الفكرية في الإعلام، بما في ذلك نظريات المجتمع الشبكي، والفضاء العام الرقمي، ودور الإعلام في بناء الهوية الثقافية. كما يتناول المساق مفاهيم رئيسية مثل الوساطة الإعلامية المتعددة، والصناعات الاعلامية، والتحولات الرقمية وتأثيرها على تشكيل الأطر الفكرية والثقافية.

**Course Code:CDM503**
**Course Name:الذكاء الإصطناعي والإعلام الرقم**
**Prerequisites: Non**
**Course Description**

يهدف هذا المساق إلى التعرف على تأثيرات تطبيقات الذكاء الإصطناعي والإعلام الرقمي، وخصائصهما ووظائفهما ومجالات استخداماتهما، في المجال الإعلامي، ومدى الاعتماد على تطبيقات الذكاء الإصطناعي في صناعة المحتوى الإعلامي والممارسة المهنية للإعلام الرقمي، وحدود استخدام أجهزة الروبوت في المجال الإعلامي سواء في تحرير وصياغة الأخبار أو التقديم أو التصوير التلفزيوني، أو في العلاقات العامة، وكيفية استخدام تطبيقات الذكاء الإصطناعي في إثراء وتقديم محتوى الإعلام الرقمي بصورة احترافية، فضلاً عن المقارنة بين أنواع تطبيقات الذكاء الإصطناعي وتأثيرها على وظائف الإعلام، ومناقشة متغيرات أخلاقيات توظيف تطبيقات الذكاء الاصطناعي في المجال الإعلامي.

**Course Code:CDM601**
**Course Name:مناهج بحوث الاتصال والإعلام**
**Prerequisites: CMD501**
**Course Description :**

يهدف هذا المساق إلى تعريف الطالب بالمفاهيم الحديثة للبحث العلمي ومناهجه وأدواته في المجال الاتصالي والإعلامي، ورفع قدرة الطالب وكفاءته في التعرف على المشكلات العلمية واكتشافها وتحليلها، وإجادة وضع التساؤلات العلمية وصياغة الفروض العلمية والقدرة على التعامل مع أدوات جمع المعلومات وطرائق القياس والاساليب الإحصائية لتحليل البيانات كماً وكيفاً. بالإضافة لاستخراج النتائج العلمية بشكل سليم، وصياغة التوصيات، والمقترحات، والحلول. التي تسهم في تطوير المجالات الاتصالية والإعلامية. وتعزيز المهارات البحثية الفردية والجماعية ضمن فرق البحوث العلمية

**Course Code: CDM602**
**Course Name: الاتصال الاستراتيجي**
**Prerequisites: CMD503**
**Course Description**

يتناول مساق "الاتصال الاستراتيجي" بالدرس المفاهيم الأساسية والممارسات العملية المرتبطة بتخطيط وتنفيذ استراتيجيات الاتصال الاستراتيجي في السياقات المؤسسية والمجتمعية. يهدف المساق إلى إبراز أهمية الدور الحيوي للاتصال في تحقيق أهداف المؤسسات في مجالات بناء السمعة، إدارة الأزمات، والتفاعل مع الجمهور الداخلي والخارجي وغيرها. يهدف المساق أيضا الى تطوير مهارات التفكير النقدي والتطبيق العملي من خلال دراسة حالات واقعية وتصميم الخطط الاتصالية المتكاملة.

**Course Code:CDM603**
**Course Name: الأخلاقيات الإعلامية والمسؤولية المهنية**
**Prerequisites: CMD502**
**Course Description:**

يتناول مساق "الأخلاقيات الإعلامية والمسؤولية المهنية" المفاهيم الأساسية للأخلاقيات الإعلامية والمسؤولية المهنية، مع التمييز بين الأخلاقيات والقوانين. وفيه يقيم الطالب قضايا محورية مثل التحيز الإعلامي، الخصوصية، وتغطية الأزمات، من خلال تحليل أمثلة واقعية. كما يُمكّن الطالب من اتخاذ قرارات مهنية مبنية على أسس أخلاقية في سياقات مختلفة، مثل إعداد التقارير الاستقصائية، التعامل مع الأخبار الزائفة، أو تغطية النزاعات. ويُركز المساق على تعزيز التزام الطالب بالقيم المهنية، بما في ذلك النزاهة، الشفافية، واحترام التنوع والشمولية، أثناء التعامل مع المحتوى الإعلامي. ويجمع المساق بين الجانب النظري والعملي، مع التركيز على تطوير التفكير النقدي والتطبيق المهني.

**Course Code:CDM701**
**Course Name : رسالة ماجستير في الاتصال والإعلام الرقمي**
**Prerequisites: Completion of 18 required credit hours, including the course CDM601.**
**Course Description**

رسالة الماجستير هي مشروع بحثي معمق يقوم به الطالب تحت إشراف مشرف أكاديمي، يتناول من خلاله موضوعًا بحثيًا يسهم في تطوير المعرفة، أو في فهم القضايا النظرية أو التطبيقية في مجالات الاتصال والإعلام الرقمي.

تشمل رسالة الماجستير دراسة نقدية وتحليلية متعمقة للقضايا المتصلة بالنظريات الاتصالية في سياق الاعلام الرقمي، يتم اعدادها وفق مناهج البحث العلمي واخلاقياته. يجب أن تُظهر الرسالة قدرة الطالب على:

- تحديد مشكلة بحثية واضحة وذات أهمية.
- صياغة الأسئلة البحثية أو الفرضيات بدقة.
- توظيف الأدبيات والنظريات في دعم الإطار البحثي.
- استخدام منهجيات البحث المناسبة (النوعي، الكمي، أو المختلط).
- تقديم نتائج أصيلة وتحليلها بشكل نقدي.
- كتابة رسالة بحثية أكاديمية وفق معايير البحث العلمي.

## Elective Courses

**Course Code: CDM 504**
**Course Name: إدارة المؤسسات الإعلامية**
**Prerequisites: Non**
**Course Description**

يهدف المساق إلى تعريف الطالب بالنظريات الرئيسية في الإدارة" النظريات التقليدية والنظريات الحديثة"، ويشرح أهم وظائف الإدارة من تخطيط إداري وأنواعه ومكوناته بالإضافة إلى عملية التنظيم الإداري من حيث المفهوم والأهداف وعناصره وأساسيات القيادة الإدارية ونظرياتها وأنماط القيادة وأنواعها، بالإضافة إلى أساسيات اتخاذ القرارات الإدارية، وأساسيات الاتصالات الإدارية، ومفهوم الرقابة وأنواعها. ومناقشة المفاهيم المتعلقة بإدارة المؤسسات الإعلامية (الصحفية والاذاعية والتلفزيونية والعلاقات العامة والإعلان) والعوامل المؤثرة في التخطيط والتنظيم الاداري في المؤسسات الإعلامية، فضلا عن تعريفهم على النماذج التطبيقية لإدارة المؤسسات الإعلامية وتقييم أدائها، وتمكينهم من دراسة بنية هياكلها التنظيمية، ومحدداتها وأشكالها، ووضع التوصيف الوظيفي في المؤسسة الإعلاميّة. ويتناول المساق التحديات التي تواجه إدارة المؤسسات الإعلامية (الاقتصادية، والسياسية، والاجتماعية والثقافية).

**Course Code:CDM505**
**Course Name:مهارات اللغة الإنجليزية في الإعلام**
**Prerequisites:**
**Course Description:**

This course aims to enhance students' English language proficiency within the field of Media communication. It focuses on developing essential skills such as reading, writing, listening, and speaking. while deepening their understanding of language use in media contexts. Students will engage in analyzing and creating various media texts, including news articles, advertisements, blogs, podcasts, and social media content, preparing them to navigate both traditional and digital platforms effectively. The course emphasizes vocabulary development, critical thinking, media literacy, and practical communication skills. By the end of the course, students will be able to interpret, evaluate, and produce content that meets the evolving needs of the media industry.

**Course Code:CDM506**
**Course Name دراسات الجمهور وتحليل البيانات الإعلامية:**
**Prerequisites:**
**Course Description:**

يعد هذا المساق من المساقات المتقدمة التي تركز على فهم وتحليل البيانات الإعلامية والسلوك الجماهيري في عصر الإعلام الرقمي. يهدف المساق إلى تقديم أدوات وتقنيات مبتكرة لتحليل واستخدامها لفهم الجمهور، (Big Data) البيانات الكبرى سلوكياته، وتوجهاته في تعاملاته مع المحتوى الإعلامي في العصر الرقمي.

كما يشتمل المساق على دراسة الأدوات الإحصائية المتقدمة، وتقنيات تحليل النصوص، والشبكات الاجتماعية، وتحليل البيانات الرقمية باستخدام البرمجيات المتخصصة في الإعلام. ستتم مناقشة التحديات الأخلاقية والعملية المرتبطة باستخدام هذه البيانات في تطوير استراتيجيات الإعلام الرقمي.

كماً وكيفاً. بالإضافة لاستخراج النتائج العلمية بشكل سليم، وصياغة التوصيات، والمقترحات، والحلول. التي تسهم في تطوير المجالات الاتصالية والإعلامية. وتعزيز المهارات البحثية الفردية والجماعية ضمن فرق البحوث العلمية

**Course Code: CDM604**
**Course Name: الإعلام الرقمي والابتكار التكنولوجي**
**Prerequisites: Non**
**Course Description**

يتناول المساق استكشاف التحولات التي أحدثتها التقنيات الرقمية والابتكارات التكنولوجية في مجال الإعلام وصناعة المحتوى. يركز على توظيف الأدوات الرقمية الحديثة لتحليل الاتجاهات الإعلامية الجديدة، وتطوير استراتيجيات فعالة لإنتاج وتوزيع المحتوى. كما يناقش المساق القضايا التقنية والمهنية المرتبطة بالتكنولوجيا الرقمية، وتأثير الذكاء الاصطناعي، والواقع الافتراضي في الإعلام

**Course Code: CDM605**
**Course Name: الإعلام والسياسات العامة**
**Prerequisites: Non**
**Course Description**

يهدف هذا المساق إلى تعريف الطلبة بالعلاقة التفاعلية بين الإعلام والسياسات العامة، ودور وسائل الإعلام في صياغة وتشكيل السياسات العامة وتأثيرها على صناع القرار. كما يتناول المساق آليات توظيف وسائل الإعلام في عملية صنع السياسات العامة، وتحليل دور الإعلام في مراحل تطور السياسات العامة من تحديد المشكلة وصياغة الأجندة إلى التقييم والتطوير. ويركز المساق على دراسة نماذج وحالات عملية لتأثير الإعلام على السياسات العامة في العالم العربي، مع التركيز على دور الإعلام الجديد ومنصات التواصل الاجتماعي في التأثير على السياسات العامة.

**Course Code: CDM606**
**Course Name: حلقة بحث في موضوع خاص**
**Prerequisites: Non**
**Course Description**

يتناول هذا المساق دراسة معمّقة في موضوع محدد يتصل بالمتغيرات العلمية الحاصلة في مجالات الاتصال والإعلام الرقمي، ويتم تحديدها بناًء على التوجهات الأكاديمية والبحثية ذات الصلة بتلك القضايا، حسب ما يراه أستاذ المساق في كل فصل دراسي يتم فيه طرح المساق. كما يركز المساق على استكشاف وتحليل القضايا المعاصرة في الاتصال والإعلام الرقمي والثقافة والمجتمع وتطوراتها، من خلال تناول أبعادها النظرية والتطبيقية. بهدف تمكين الطلبة من مهارات البحث والنقد والتحليل، من خلال دراسة موضوعات مختارة بعناية، مثل التأثيرات الثقافية للاتصال والإعلام الرقمي، والتحولات الاجتماعية، أو أي قضايا علمية حديثة. ويحفز المساق الطلبة على إنتاج أوراق بحثية ومشاريع تطبيقية تسهم في فهم أعمق لمجال التخصص.

# Facilities

## Cafeteria and Recreational & Sports Facilities:

The cafeteria is operated by an outsourced catering service that ensures fresh andhygienic meals, strictly following health and safety guidelines. It features separate seating areas for men and women, each accommodating approximately 100 people.Additionally, the facility offers indoor recreational options such as table tennis, foosball, billiards, PS5 gaming, and a large chessboard for both students and staff.

## Multipurpose Hall:

The multipurpose hall has a seating capacity of 120+ and is equipped with a 96-inch interactive screen for presentations and projections, along with a high-quality audio system. The hall is versatile and can easily be converted into an exhibition center, meeting room, event space, or other required configurations.

## Clinic:

The University first aid clinics at both Abu Dhabi and Alain are licensed under DOH with one registered nurse each to provide first aid care, symptomatic treatment for illnesses and injuries that occur within the University premises. The clinic is equipped with all first aid medical equipment and medicines as well. Monthly medical awareness classes are provided to all the University employees and students. Furthermore, the students and employees can check their health checkups in the clinic and clear any doubts regardingtheir health issue's such as Blood Pressure, Blood Glucose Level, Oxygen Level etc.

# Board of Trustees Members (BoT)

## HE Dr. Ali bin Harmal Aldhaheri, Chairman

Dr. Al Dhaheri, with over two decades of business experience, has a successful track record. After earning his MBA with distinction from the American University in WashingtonDC, he founded, launched, and managed successful businesses in various sectors, including IT, finance, education, tourism, and real estate. Apart from being a start-up visionary, heexcels in driving sustainable growth in large organizations and has contributed to government tourism and development strategy, MICE, and education management. Currently, Dr. Al Dhaheri holds key positions, including Chairman of Abu Dhabi University and CEO of NEMA Holding Company. He has also servedon theboards of various prestigious organizations and holds committee positions in both private and government entities. Living by his philosophy of continuous learning, Dr. Ali completed his PhD at Durham University, where his research on "Cultural Intelligence and the ability to adapt leadership style in a multicultural environment" has provided valuable insights applicable to the region, a first of its kind.

## HE Dr. Sulaiman Al Jassim, Vice Chairman

Dr. Sulaiman Al Jassim, the current Vice President of Zayed University since 2006, boasts a diverse background. He held senior positions in Education, Politics, Culture, and served as Chairman of the UAE Cooperative Consumer Society. His experience extends to the media and press as an editor and author. Dr. Sulaiman has presented lectures on Education, Human Resource, and Population matters atlocal and international conferences. He compiled his newspaper articles into a book titled "A Call for Dialogue" and authored two Arabic plays. Educationally,

Dr. Sulaiman holds a Ph.D. in Manpower Development from Exeter University (1990), a Master of Philosophy (1987), and a Bachelor of Science in Public Administration (1985) from United Arab Emirates University. He also acquired a diplomacy degree from Oxford University (1975) and a Teacher's Diploma from the Ministry of Education (1971). Additionally, he completed courses in higher education at various universities, including Bath, Brighton (in the UK), Harvard, and Cornell (in the United States).

## HE Ahmed Shabeeb Al Dhaheri, Member

Ahmed Shabeeb Al Dhaheri is a highly accomplished professional with an impressive academic background, having attained a Bachelor's degree in Economics and multiple Master's degrees. He has a remarkable work history, holding key positions at renowned organizations such as the Abu Dhabi m Investment Authority, Zayed Bin Sultan Al-Nahayan Charitable and Humanitarian Foundation, Federal National Council, and Universal Group Holding, where he is currently the Executive Vice President.

Ahmed's involvement in several boards and volunteer work reflects his strong commitment to social causes, and he actively participates in conventions and media interviews to promote UAE's accomplishments and policies. His exceptional career has earned him numerous awards and appreciation letters, and he has undertaken impactful visits to institutions around the world. His strong leadership and management skills have contributed to his success.

## Mr. Yusuf Alami, Member

Mr. Alami's illustrious career in corporate finance and global capital markets spans over four decades. Throughout his journey, he has excelled in private placements, public offerings, and asset management across the Middle East, Europe, Asia, and the USA. His expertise has been sought after in prestigious financial institutions worldwide, including the Abu Dhabi Investment Company and The National Investor in the UAE, KFTCIC in Kuwait, and First Boston in New York, London, and Athens.

Currently, Mr. Alami continues to contribute his financial acumen as a financial advisor and board member to various regional entities. He holds a Master's degree in Business Administration from Indiana University, USA, and a Bachelor's degree in Economics from the esteemed American University of Beirut. Mr. Alami's extensive experience and educational background have shaped him into a prominent figure in the realm of corporate finance and investment, earning him respect and recognition across the globe.

## Mr. Abdallah Osseiran, Member

With an extensive background in the banking industry, Mr. Osseiran is a seasoned professional who has honed his expertise in various domains, such as corporate finance, corporate banking, and business development. Throughout his career, he has demonstrated proficiency in managing private equity, assets, and investments in diverse

sectors, ranging from Education and Hospitality to Financials, Construction, Real Estate, Private Equity, and Venture Capital. Currently holding the esteemed position of Managing Director at Magna Investments.

Mr. Osseiran continues to make significant contributions to the financial landscape. His strategic vision, coupled with his wealth of experience, have earned him a reputation as a leader and innovator in the field. Mr. Osseiran's unwavering commitment to excellence and his ability to navigate complex financial landscapes have enabled him to thrive in a highly competitive industry. With many years of success behind him and relentless driveto achieve more, he sits on a number of boards and committees on publicly listed companies and private, renowned organizations.

### Mr. Mohammed Qusai Al Ghussein, Member

Being born into a successful entrepreneurial family, Mohammed has been actively involved in many of his family's diversified businesses since an early age. After completing his Bachelor of Civil Engineering from the United States, Mohammed took on his first active role at Bin Harmal Group. As Director of Strategic planning, he led the group into expansion in various sectors and geographies. Mohammed then established Stella Investments in 2007, this was the holding company that overlooked the family's investments and enabled it to acquire and divest businesses in a solid well diversified private equity investment strategy. He led the team that invested in numerous businesses including Abu Dhabi University, Al Ain English Speaking School, Stella Stays, Stella Hospitality and GFS Global. Mohammed sits on the board of Bin Harmal Group, Abu Dhabi University, NEMA Holding and Belvedere International School.

### Prof Mohamed Dhiaf, President Ex- Officio Member

Prof. Dhiaf earned his Ph.D. from ENSAM de Paris- France. He has over 20 years of teaching, consulting, and research experience in Tunisia and abroad. His research interests lie in Operations Management and Logistics, Supply Chain Management, Performance Assessment, and Lean management. Prof. Dhiaf is an Associate Editor of the Journal of Business and Socio-economic Development (Emerald). Most of his papers have been published in International peer-reviewed Journals and he's a reviewer for many academic

Scientific Journals and an editorial board member of several International Conferences. Prof. Dhiaf has invested his experience in designing and developing academic programs (Bachelor and Master levels) according to National and International standards and he led the accreditation and re- accreditation of the

Business Programs several times. In addition to his current position as President of Liwa University, Prof. Dhiaf has good admin experience as Dean of Business Faculty, Head of Department, Campus Director,etc.

### Ms. Kristina E. Turner, Board Secretary

Ms. Kristina brings a number of years of governance experience and the management of Board level meetings. She currently serves as Secretary to the Board of Directors, NEMA Holding, Abu Dhabi University, and the Board of Trustees for Liwa University.

# Senior Administration

**Prof. Mohamed Mahjoub Dhiaf**
President

**Prof. Hany El Kadi**
Vice President for Academic Affairs

**Prof. Raed Abdallah Abu Zitar**
Dean, College of Engineering and Computing

**Prof. Badran Badran**
Dean,College of Media and Public Relations

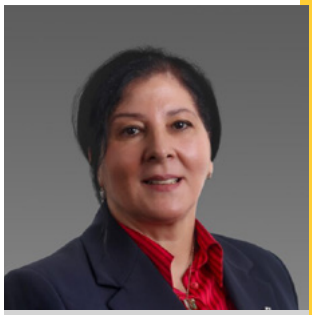

**Prof. Maxime Merheb**
Dean, College of Medical and Health Sciences

**Dr. Anas Al-Qudah**
Dean, College of Business
